Information Layout

In the bookmarks to the left you will find the information divided into different color coded segments:

Primary Information

This is the core information for this vehicle. Use this segment as your major point of reference and information.

Supplementary Information (if available)

These segments are updates and additions to the core information. They are added as needed when certain changes are made to the model. Be sure to check these for additional information that may be lacking from the core information section.

GENERAL INFORMATION

FEATURES

OVERRIDE SWITCH
(DEACTIVATING THE SPEED LIMITER WHEN THE DIFFERENTIAL IS LOCKED)

This model is equipped with a speed limiter system (35 km/h [22 mph]) that operates when the differential is locked and the ATV is traveling forward. If additional engine power is required (e.g., to free the ATV from mud) when the ATV is traveling forward and the differential is locked, the speed limiter can be temporarily deactivated by pressing the override switch.

NOTE:
The speed limiter is deactivated only while the override switch is being pressed.

Override switch

When the override switch is pressed, the segments of the speedometer digits are displayed as follows.

NOTE:
- When the front differential gear is locked and the drive select lever is in the “L”, “H”, “N”, or “P” position, the display changes when the override switch is pressed. (The speedometer display is not displayed at this time.)
- When the front differential gear is not locked or the drive select lever is in the “R” position, the display does not change even if the override switch is pressed.
CAUTION:
If the segments of the speedometer digits show the override display when the override switch is not pressed, the speed limiter system is malfunctioning. Check the override switch and ignition system, and then repair if necessary.

STEERING SYSTEM

INSTALLING THE REAR BRAKE LEVER

1. Install:
   - Handlebar switch ①
   - Rear brake lever
   - Lever bracket ②

NOTE:
Install the lever bracket as shown.

③ 74.5 mm (2.9 in)
CHECKING THE SWITCH CONTINUITY

Refer to “CHECKING THE SWITCH” in CHAPTER 9 (Manual No.: 5KM-28197-E0) and check for continuity between lead terminals.

Poor connection, no continuity → Correct or replace.

* The coupler locations are circled.

SPECIAL TOOLS

The following special tools are necessary for complete and accurate tune-up and assembly. Use only the appropriate special tools; this will help prevent damage caused by the use of inappropriate tools or improvised techniques. Special tools may differ by shape and part number from country to country. In such a case, two types are provided.

When placing an order, refer to the list provided below to avoid any mistakes.

For US and CDN
   P/N. YM-, YU-, YS-, YK-, ACC-

Except for US and CDN
   P/N. 90890-

CABLE ROUTING

① Fuel sender lead
② Differential gear case and final drive gear case breather hose
③ Vacuum chamber breather hose
④ Starter motor lead
⑤ Wire harness
⑥ Gear position switch lead
⑦ Final drive gear case breather hose
⑧ Ground lead
⑨ Speed sensor lead
⑩ AC magneto lead
⑪ Carburetor breather hose
⑫ Starter cable
⑬ Fuel hose
⑭ Thermo switch 1 lead
⑮ Reverse switch lead
⑯ AC magneto coupler
⑰ Gear position switch coupler
⑱ Speed sensor coupler
⑲ Radiator fan breather hose
⑳ Rectifier/regulator lead
㉑ Water pump breather hose
A Fasten the final drive gear case breather hose, speed sensor lead, ground lead, gear position switch lead, AC magneto lead, wire harness, and reverse indicator light lead with a plastic locking tie. Be careful not to pinch the breather hose.

B Fasten the leads in the following order: ground lead, reverse switch lead, speed sensor lead, gear position switch lead, and AC magneto lead.

C Pass the final drive gear case breather hose through the hole in air duct assembly 3.

D To the rear fender

E 70 ~ 90 mm (2.8 ~ 3.5 in)

F Clamp the thermostat assembly breather hose and carburetor breather hose with the cable guide.
Pass the vacuum chamber breather hose through the plastic cover hole.

Insert a hook into the third hole from the bottom of the rectifier/regulator bracket, and then fasten the final drive gear case breather hose onto the hook.
① Gear position switch
② Reverse switch
③ Crankcase breather hose
④ Select lever control cable
⑤ Rear brake cable
⑥ Front brake hose
⑦ Rear brake light switch lead
⑧ Spark plug lead
⑨ Fan motor breather hose
⑩ Fan motor lead
⑪ Brake fluid reservoir hose

⑫ Rear brake hose

A Pass the rear brake cable and throttle cable through the cable guide.
B Pass the rear brake light switch lead, main switch lead and auxiliary DC jack lead over the front fender.
Clamp the spark plug lead and radiator inlet hose with a plastic clip.

When installing the ignition coil, face the spark plug lead to the right side of the frame.

To the rear fender hole

Pass the brake light switch lead on the inside of the rear brake cable and select lever control cable, and through the cable guide of the brake master cylinder cover.
① Front brake hose
② Throttle cable
③ Thermo switch 1 lead
④ Crankcase breather hose
⑤ Fuel sender lead
⑥ Differential gear case breather hose
⑦ Starter cable
⑧ Select lever control cable
⑨ Wire harness
⑩ Fan motor breather hose

A Pass the thermo sensor 1 lead through the lead guide.
B Pass the crankcase breather hose through the hose guide.
C Pass the fuel sender lead through the lead guide.
D Pass the select lever control cable through the hole of the select lever unit bracket.
E Clamp the starter cable with a cable holder.
F Pass the throttle cable through the cable guide.
Fasten the wire harness speed sensor coupler, thermo switch 1 lead, reverse switch lead, and ground lead with a plastic locking tie.
## PERIODIC CHECKS AND ADJUSTMENTS

### INTRODUCTION
This chapter includes all information necessary to perform recommended inspections and adjustments. These preventive maintenance procedures, if followed, will ensure more reliable vehicle operation and a longer service life. The need for costly overhaul work will be greatly reduced. This information applies to vehicles already in service as well as to new vehicles that are being prepared for sale. All service technicians should be familiar with this entire chapter.

* It is recommended that these items be serviced by a Yamaha dealer.
** Lithium-soap-based grease

NOTE:
- Recommended brake fluid: DOT 4
- Brake fluid replacement:
  1. When disassembling the master cylinder or caliper, replace the brake fluid. Normally check the brake fluid level and add fluid as required.
  2. On the inner parts of the master cylinder and caliper, replace the oil seals every two years.
  3. Replace the brake hoses every four years, or if cracked or damaged.

⚠️ WARNING
Indicates a potential hazard that could result in serious injury or death.

33 Nm (3.3 m·kg, 24 ft·lb)
ENGINE
CHECKING THE STARTER CABLE
1. Remove:
   - Seat
   - Fuel tank side panel (left)
2. Check:
   - Starter cable
     Unsmooth operation → Replace.

Checking steps:
- Disconnect the starter cable ① from the carburetor body.

NOTE: Do not remove the starter plunger ② from the starter cable.
- Measure the starter plunger stroke distance ③ of the starter lever ④ from the fully closed to fully open positions.

![Starter plunger stroke distance: 15 mm (0.59 in)]

A Fully closed position
B Fully open position
- Connect the starter cable to the carburetor.

WARNING
After checking the cable, turn the handlebar right and left, and make sure that the engine idling speed does not increase.

3. Install:
   - Fuel tank side panel (left)
   - Seat

CHECKING THE STARTER CLUTCH

1. Check:
   - Starter clutch ①
     Cracks/damage → Replace.
   - Bolts ② (starter clutch)
     Loose → Replace with new ones, and clinch the end of the bolts.

**NOTE:**
The arrow mark on the starter clutch must face inward, away from the CDI rotor.

---

**Bolts (starter clutch):**
30 Nm (3.0 m • kg, 22 ft • lb)
LOCTITE®

---

Checking steps:
- Install the starter wheel gear onto the starter clutch, and hold the starter clutch.

**NOTE:**
Install the starter wheel gear with the groove ① facing the CDI rotor.

- Turn the starter wheel gear counterclockwise \( \text{A} \) to check that the starter clutch and wheel gear engage.
  If the starter clutch and wheel gear do not engage, replace the starter clutch.
- Turn the starter wheel gear clockwise \( \text{B} \) to check the starter wheel gear for smooth operation.
  If operation is not smooth, replace the starter clutch.

---

2. Check:
   - Gear teeth (starter idle) ①
   - Gear teeth (starter wheel) ②
     Burrs/clips/roughness/wear → Replace.

3. Check:
   - Starter wheel gear
     (contacting surface)
     Damage/pitting/wear → Replace.

REMOVING THE MIDDLE DRIVEN SHAFT

1. Remove:
   - Nut ①
   - Washer
   - Front drive shaft coupling

**NOTE:**
Use the coupling gear holding tool ② to hold the front drive shaft coupling.

**Coupling gear holding tool:**
P/N. YM-01486, 90890-01486

2. Remove:
   - Nut ①
   - Washer
   - Coupling gear ②

**NOTE:**
Use the coupling gear/middle shaft tool ③ to hold the coupling gear.

**Coupling gear/middle shaft tool**
P/N. YM-01230, 90890-01229

3. Remove:
   - Bearing housing assembly ①

**Removal steps:**
- Clean the outside of the middle driven shaft.
- Place the middle driven shaft onto a hydraulic press.

**CAUTION:**
- Never directly press the shaft end with a hydraulic press, this will result in damage to the shaft thread.
- Install the suitable socket ② on the shaft end to protect the thread from damage.
- Press the shaft end and remove the bearing housing.
4. Remove:
- Bearing retainer
- Bearing

******************************************************

Removal steps:
- Place a rag ① in the vise.
- Secure the bearing housing edge in the vise.
- Attach the bearing retainer wrench ②.

Bearing retainer wrench:
P/N. YM-04128, 90890-04128

**CAUTION:** The middle driven shaft bearing retainer has left-handed threads. To loosen the retainer, turn it clockwise.

- Remove the bearing retainer and bearing.

******************************************************

5. Remove:
- Front drive shaft coupling
- Oil seal ①
- Bearing retainer ②
- Bearing

**NOTE:** Attach the ring nut wrench ③.

Ring nut wrench:
P/N. YM-38404, 90890-01430

**CAUTION:** The middle driven shaft bearing retainer has left-handed threads. To loosen the retainer, turn it clockwise.

6. Remove:
- Middle drive shaft ① (with bearing)
INSTALLING THE MIDDLE DRIVEN SHAFT

1. Install:
   - Bearing retainer ①
   - 80 Nm (8.0 m•kg, 58 ft•lb)

   NOTE: Attach the ring nut wrench ②.

   Ring nut wrench:
   P/N. YM-38404, 90890-01430

   **CAUTION:** The middle driven shaft bearing retainer has left-handed threads. To tighten the retainer, turn it counterclockwise.

2. Install:
   - Bearing retainer ①

   Installation steps:
   - Place a rag ② in the vise.
   - Secure the bearing housing edge in the vise.
   - Attach the bearing retainer wrench ③.

   Bearing retainer wrench:
   P/N. YM-04128, 90890-04128

   - Tighten the bearing retainer.

   **CAUTION:** The middle driven shaft bearing retainer has left-handed threads. To tighten the retainer, turn it counterclockwise.

   Bearing retainer: 110 Nm (11.0 m•kg, 80 ft•lb)

   ************************************************************

3. Install:
   - Shims ①
   - Bearing housing

   NOTE: Install the shims so that the tabs are positioned as shown in the illustration.
4. Install:
- Front drive shaft coupling
- Washer
- Nut \( \mathbf{1} \) \[97 \text{ Nm (9.7 m} \cdot \text{kg, 70 ft} \cdot \text{lb)}\]

**NOTE:**
Use the coupling gear holding tool \( \mathbf{2} \) to hold the front drive shaft coupling.

**Coupling gear holding tool:**
P/N. YM-01486, 90890-01486
**Removing the front constant velocity joint and differential gear**

- Engine skid plate (front)
- Front fender
- Differential gear oil
- Steering knuckle
- Front arms (lower)
- Brake master cylinder cover

**Note:** The diagrams and specifications indicate the following torques:
- 62 Nm (6.2 m·kg, 45 ft·lb)
- 23 Nm (2.3 m·kg, 17 ft·lb)
- 13 Nm (1.3 m·kg, 9.4 ft·lb)
- 10 Nm (1.0 m·kg, 7.2 ft·lb)
- 25 Nm (2.5 m·kg, 18 ft·lb)
DISASSEMBLING THE DIFFERENTIAL GEAR
1. Remove:
   • Coupling gear
     Use a coupling gear holding tool (①).

Coupling gear holding tool:
P/N. YM-01486, 90890-01486

CHECKING THE DIFFERENTIAL GEAR
1. Check:
   • Gear teeth
     Pitting/galling/wear → Replace drive pinion gear and ring gear as a set.
   • Bearing
     Pitting/damage → Replace.
   • Oil seal
   • O-ring
     Damage → Replace.
2. Check:
   • Drive shaft splines
   • Front drive gear splines
     Wear/damage → Replace.
   • Spring
     Fatigue → Replace.
     Move the spring up and down.
3. Check:
   • Dust boots
     Cracks/damage → Replace the front drive shaft assembly.

4. Check:
   • Front drive shaft
     Bends → Replace the front drive shaft assembly.

WARNING
Do not attempt to straighten a bent shaft; this may dangerously weaken the shaft.
5. Check:
- Front drive shaft assembly operation
  Unsmooth operation → Replace the front drive shaft assembly.

**ASSEMBLING THE DIFFERENTIAL GEAR**

1. Measure:
- Gear lash
  Refer to “MEASURING AND ADJUSTING THE DIFFERENTIAL GEAR LASH” in CHAPTER 7. (Manual No.: 5KM-28197-E0)

2. Install:
- Gear motor

**Installation steps:**
- Slide the shift fork sliding gear ①, which is installed to the differential gear, to the left to put it into the 2WD mode.
- Connect two C size batteries to the gear motor terminal ② to operate the pinion gear ③. Operate the pinion gear until the paint mark ④ on the gear is aligned with the paint mark ⑤ on the gear motor case.

**CAUTION:**
Do not use a 12 V battery to operate the pinion gear.

- Insert 8 mm bolts ⑥ into the gear motor ⑦ and use them as a guide to set the motor on the differential gear assembly ⑧ so that the shift fork sliding gear ⑨ does not move.

**CAUTION:**
If the position of the shift fork sliding gear is moved, the position of the differential gear and the indicator light display may differ, and the 2WD or differential lock mode may not be activated.

- Remove the 8 mm bolts, and then install the motor with the gear motor bolts.

<table>
<thead>
<tr>
<th>Bolts (gear motor)</th>
</tr>
</thead>
<tbody>
<tr>
<td>13 Nm (1.3 m•kg, 9.4 ft•lb)</td>
</tr>
</tbody>
</table>
3. Install:
- Coupling gear
- O-ring
- Washer
- Nut

Use a coupling gear holding tool ①.

4. Check:
- Differential gear operation
  Unsmooth operation → Replace the differential gear assembly.
  Insert the double off-set joint into the differential gear, and then turn the gear back and forth.

CHECKING THE STEERING KNUCKLE

1. Check:
   - Steering knuckle
     Damage/pitting → Replace.

2. Check:
   - Front wheel bearings
     Bearings allow play in the wheel hubs or unsmooth wheel operation → Replace.
   - Oil seals
     Damage → Replace.

Replacement steps:
- Clean the outside of the steering knuckle.
- Remove the circlip ①.
- Drive out the bearing ②.

**WARNING**
Eye protection is recommended when using striking tools.

- Apply lithium-soap-based grease to the bearing.
- Install the new bearing.

**CAUTION:**
Do not strike the center race or balls of the bearing. Contact should be made only with the outer race.

- Install a new circlip.

REAR KNUCKLE AND STABILIZER

CHECKING THE REAR KNUCKLE
1. Check:
   ● Rear knuckle
     Damage/pitting → Replace.
2. Check:
   ● Rear wheel bearings
     Bearings allow play in the wheel hubs or unsmooth wheel operation → Replace.
   ● Oil seals
     Damage → Replace.

**************************************************************************************

Replacement steps:
● Clean the outside of the rear knuckle.
● Remove the circlip ①.
● Drive out the bearing ②.

⚠️ WARNING ⚠️
Eye protection is recommended when using striking tools.

● Apply lithium-soap-based grease to the bearing.
● Install the new bearing.

⚠️ CAUTION: ⚠️
Do not strike the center race or balls of the bearing. Contact should be made only with the outer race.

● Install a new circlip.

VEHICLE IDENTIFICATION NUMBER

The vehicle identification number is stamped into the left side of the frame.

MODEL LABEL

The model label is affixed to the frame. This information will be needed to order spare parts.
FEATURES

FRONT DIFFERENTIAL

1. Adapter
2. Drive clutch
3. Differential side gear (left)
4. Differential pinion gear
5. Ring gear
6. Differential side gear (right)

7. Drive pinion gear
8. Gear motor

A. To front wheel
B. From the middle gear
2WD
Power is transmitted as follows: middle gear → front drive shaft → drive pinion gear 7 → ring gear 5 → differential pinion gear 4. In the 2WD mode, the left differential side gear 3 and the drive clutch 2 are not engaged, therefore, the left side gear runs idle and does not transmit power to the left front constant velocity joint.
4WD

When the 4WD mode is selected, the gear motor is operated, and the drive clutch ② moves to the right and engages with the left differential side gear ③. Accordingly, power is transmitted as follows: ring gear ⑤ → differential pinion gear ④ → left differential side gear ③ → drive clutch ② → adapter ① → left front constant velocity joint.

Meanwhile, power from the differential pinion gear ④ is transmitted to the right front constant velocity joint via the right differential side gear ⑥.

The ring gear ⑤ and the drive clutch ② are not engaged at this time. Therefore, the rotational difference that occurs between the right and left wheels, while the handlebar is being turned, is absorbed by the difference in the rotational speeds of the ring gear ⑤ and the left differential side gear ③.
4WD (Diff-Lock)

When the 4WD (Diff-Lock) mode is selected, the gear motor moves the drive clutch 2 further to the right, which causes the ring gear 5 and the drive clutch 2 to engage. As a result, power is transmitted directly from the ring gear 5 to the drive clutch 2, then to the left front constant velocity joint via the adapter 1.

Meanwhile, because the ring gear 5 and the drive clutch 2 are engaged, the ring gear 5, the drive clutch 2, and the right differential side gear 6 become locked coaxially. Thus, power is transmitted as follows: differential pinion gear 4 → right differential pinion gear 6 → right front constant velocity joint.

When the ATV is in the 4WD (Diff-Lock) mode, the right and left wheels rotate constantly at the same speed, which affects the maneuverability of the ATV (e.g., making it difficult to steer). Therefore, the maximum traveling speed is limited to 35 km/h (22 mph).
In addition, the 4WD (Diff-Lock) mode can be engaged only when the ATV is stopped. Even if an attempt is made to select this mode when the ATV is traveling, it will only result in a standby condition (i.e., when the differential lock select switch and the differential gear are not matched).

(1) When the ATV is traveling
Even if the 4WD (Diff-Lock) mode is selected, the gear motor will stand by, instead of operating. Therefore, the ATV can be driven in the normal 4WD mode. When this occurs, the differential gear lock indicator light “” in the speedometer unit will flash to alert the driver that the control is on standby. When the ATV is stopped, the control transfers to the condition described in (2).

(2) When the ATV is stopped
The gear motor operates to connect the drive clutch to the differential case, thus resulting in the differential lock condition. When this occurs, the differential gear lock indicator light “” in the speedometer unit changes to a constant illumination.

* Until the drive clutch and the differential case mesh together (i.e., the splines are unmeshed) the engine misfires to control the engine speed. During this time, the differential gear lock indicator light in the speedometer unit continues to flash.
Shift mechanism
A new shift mechanism with a parking position has been added to the YFM660F.
1. Shift cam
2. Shift fork guide bar
3. Drive axle
4. Stopper lever shaft
Parking
(1) L (Low), H (High), N (Neutral), and R (Reverse) positions
   The end of the stopper lever is held by the return spring ①. Then, the stopper lever tab is separated from the drive axle stopper to free the drive axle.

(2) P (Park) position
   When the drive select lever is shifted to the “P” position, the cam lever of the shift cam pushes up on the end of the stopper lever. Then, the stopper lever tab pushes against the drive axle stopper to lock the drive axle.

(3) Not synchronized
   If the stopper lever tab and the drive axle stopper are not synchronized, the torsion spring is compressed. As a result, the spring pushes the stopper lever tab against the drive axle stopper and waits until the synchronization is completed. When the stop lever tab and the drive axle are synchronized, the stop lever tab pushes against the drive axle stopper in order to lock the drive axle.

1 Stopper lever
2 Return spring
3 Shift cam
4 Drive axle
TRANSMISSION
To create a compact, 3-axle transmission, a chain drive has been adopted for the reverse transmission.

1. Secondary shaft
2. Drive axle
3. Middle drive shaft
4. Low wheel gear
5. Chain

L (Low) or H (High) mode
When the transmission is in either the low or high mode, the drive axle is driven via the secondary shaft and gear. Therefore, the rotation of the drive axle is the opposite of the secondary shaft.

R (Reverse) mode
When the transmission is in the reverse mode, the drive axle is driven via the drive chain. Therefore, the rotation of the drive axle is the same as the secondary shaft. (As a result, the rotation of the drive axle is opposite to that of the low and high modes.)
IMPORTANT INFORMATION
PREPARATION FOR REMOVAL PROCEDURES
1. Remove all dirt, mud, dust and foreign material before removal and disassembly.
2. Use proper tools and cleaning equipment. Refer to the “SPECIAL TOOLS” section.
3. When disassembling the machine, always keep mated parts together. This includes gears, cylinder, piston and other parts that have been “mated” through normal wear. Mated parts must always be reused or replaced as an assembly.
4. During machine disassembly, clean all parts and place them in trays in the order of disassembly. This will speed up assembly and allow for the correct installation of all parts.
5. Keep all parts away from any source of fire.

REPLACEMENT PARTS
1. Use only genuine Yamaha parts for all replacements. Use oil and grease recommended by Yamaha for all lubrication jobs. Other brands may be similar in function and appearance, but inferior in quality.

GASKETS, OIL SEALS AND O-RINGS
1. Replace all gaskets, seals and O-rings when overhauling the engine. All gasket surfaces, oil seal lips and O-rings must be cleaned.
2. Properly oil all mating parts and bearings during reassembly. Apply grease to the oil seal lips.
EB101030

LOCK WASHERS/PLATES AND COTTER PINS

1. Replace all lock washers/plates ① and cotter pins after removal. Bend lock tabs along the bolt or nut flats after the bolt or nut has been tightened to specification.

EB101040

BEARINGS AND OIL SEALS

1. Install bearings and oil seals so that the manufacturer’s marks or numbers are visible. When installing oil seals, apply a light coating of lightweight lithium base grease to the seal lips. Oil bearings liberally when installing, if appropriate.

① Oil seal

**CAUTION:**

Do not use compressed air to spin the bearings dry. This will damage the bearing surfaces.

① Bearing

EB101050

CIRCLIPS

1. Check all circlips carefully before reassembly. Always replace piston pin clips after one use. Replace distorted circlips. When installing a circlip ①, make sure that the sharp-edged corner ② is positioned opposite the thrust ③ it receives. See sectional view.

④ Shaft
CHECKING OF CONNECTIONS

Check the connectors for stains, rust, moisture, etc.

1. Disconnect:
   - Connector

2. Check:
   - Connector
      Moisture → Dry each terminal with an air blower.
      Stains/rust → Connect and disconnect the terminals several times.

3. Check:
   - Connector leads
      Looseness → Bend up the pin ① and connect the terminals.

4. Connect:
   - Connector terminals

**NOTE:**
The two terminals “click” together.

5. Check:
   - Continuity (using a pocket tester)

**NOTE:**
- If there is no continuity, clean the terminals.
- When checking the wire harness be sure to perform steps 1 to 3.
- As a quick remedy, use a contact revitalizer available at most part stores.
- Check the connector with a pocket tester as shown.
The following special tools are necessary for complete and accurate tune-up and assembly. Use only the appropriate special tools; this will help prevent damage caused by the use of inappropriate tools or improvised techniques. Special tools may differ by shape and part number from country to country. In such a case, two types are provided.

When placing an order, refer to the list provided below to avoid any mistakes.

For US and CDN
P/N. YM-, YU-, YS-, YK-, ACC-

Except for US and CDN

### Front disc brake:
- **Type**: Dual
- **Disc outside diameter × thickness**: 220.0 × 3.5 mm (8.66 × 0.14 in)
- **Pad thickness**: inner 4.2 mm (0.17 in), outer 4.2 mm (0.17 in)
- **Master cylinder inside diameter**: 14 mm (0.55 in)
- **Caliper cylinder inside diameter**: 32 mm (1.26 in)
- **Brake fluid type**: DOT 4

### Rear disc brake:
- **Type**: Single
- **Disc outside diameter × thickness**: 150.0 × 8.5 mm (5.91 × 0.33 in)
- **Pad thickness**: inner 7.0 mm (0.28 in), outer 7.0 mm (0.28 in)
- **Master cylinder inside diameter**: 14 mm (0.55 in)
- **Caliper cylinder inside diameter**: 22.65 mm (0.89 in)
- **Brake fluid type**: DOT 4

### Brake lever and brake pedal:
- **Brake lever free play (left)**: 0.5 ~ 2 mm (0.02 ~ 0.08 in)
- **Brake pedal position**: 45 mm (1.77 in)
- **Throttle lever free play**: 3 ~ 5 mm (0.12 ~ 0.20 in)

HOW TO USE THE CONVERSION TABLE

All specification data in this manual are listed in SI and METRIC UNITS.
Use this table to convert METRIC unit data to IMPERIAL unit data.

Ex.

<table>
<thead>
<tr>
<th>METRIC</th>
<th>MULTIPLIER</th>
<th>IMPERIAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>** mm</td>
<td>× 0.03937</td>
<td>** in</td>
</tr>
<tr>
<td>2 mm</td>
<td>× 0.03937</td>
<td>0.08 in</td>
</tr>
</tbody>
</table>

GENERAL TORQUE SPECIFICATIONS

This chart specifies torque for standard fasteners with standard I.S.O. pitch threads. Torque specifications for special components or assemblies are provided for each chapter of this manual. To avoid warpage, tighten multi-fastener assemblies in a crisscross fashion, in progressive stages, until the specified torque is reached. Unless otherwise specified, torque specifications require clean, dry threads. Components should be at room temperature.

CABLE ROUTING

1. Rear brake light switch
2. Rear brake cable
3. Starter cable
4. Front brake hose
5. Throttle cable
6. On-command four-wheel drive switch and differential gear lock switch lead
7. Front brake light switch lead
8. Handlebar switch lead
9. Rear brake light switch lead
10. Fan motor lead
11. Sub-wire harness (to gear motor)
12. Differential gear case breather hose

A Pass the cable, hose, and leads between the meter assembly and plastic cover.
Fasten the front brake light switch lead, and the on-command four-wheel drive switch and differential gear lock switch lead behind the handlebar with a plastic band.

Fasten the handlebar switch lead and rear brake switch lead behind the handlebar with a plastic band.

Pass the cable, hose, and leads through the slit of the handlebar cover.

Fasten the thermo switch 2 lead, fan motor lead, coolant reservoir breather hose, coolant reservoir hose, gear motor lead and differential gear case breather hose with a plastic band. Install the plastic band facing inward.

Fasten the gear motor lead and differential gear case breather hose with a plastic band. Be sure not to pinch the hose. Install the plastic band facing inward.
G Pass the brake hose through the hose guide.
H Fasten the on-command four-wheel drive switch and differential gear lock switch lead, front brake light switch lead, handlebar switch lead, and rear brake light switch lead on the front side on the steering stem with a plastic locking tie.
1. Park brake light switch
2. On-command four-wheel drive switch and differential gear lock switch lead
3. Headlight lead
4. Coolant reservoir breather hose
5. Differential gear case breather hose
6. Fan motor breather hose
7. Main switch lead
8. Auxiliary DC jack lead

To the front brake light switch, on-command four-wheel drive switch and differential gear lock switch, handlebar switch, and rear brake light switch.

After routing all leads and couplers fasten them together with a plastic band.

Pass the on-command four-wheel drive switch and differential gear lock switch lead and headlight lead through the guide on the front fender.

Pass the coolant reservoir breather hose and differential gear case breather hose through the guide on the front fender.
Pass the fan motor breather hose through the guide on the front fender.

Pass the headlight lead through the guide on the front fender.
① Coolant reservoir hose  
② Fan motor lead  
③ Ignition coil coupler  
④ Starter cable  
⑤ Fuel tank breather hose  
⑥ Coolant reservoir breather hose  
⑦ Gear motor lead  
⑧ Differential gear case breather hose  
⑨ Thermo switch 2 lead

A Connect the ignition coil coupler under the front fender.  
B Pass the starter cable through the cable guide at the front of plastic cover.  
C Route the fuel tank breather hose behind the plastic cover.  
D Insert the fuel tank breather hose into the hole into the handlebar cover.  
E Make sure that the starter cable does not have any slack between the cable holder plastic cover and the plastic clamp.
Slacken the coolant reservoir hose, and then insert it between the frame and the water pump inlet. Be sure not to pinch the hose.

Fasten the coolant reservoir hose and water pump inlet hose with a plastic band. Be sure to not pinch the hoses. Install the plastic band facing inward.

Fasten the coolant reservoir breather hose, coolant reservoir hose, and water pump inlet hose with a plastic band. Be sure not to pinch the hoses. Install the plastic band facing inward.

Clamp the water pump inlet hose and thermo switch 2 lead with a plastic clamp.

Fasten the thermo switch 2 lead, fan motor lead, coolant reservoir breather hose, coolant reservoir hose, gear motor lead, and differential gear case breather hose with a plastic band. Install the plastic band facing inward.

To the differential gear
1 Fuel sender lead
2 Differential gear case breather hose
3 Vacuum chamber breather hose
4 Starter motor lead
5 Wireharness
6 Gear position switch lead
7 Final drive gear case breather hose
8 Ground lead
9 Speed sensor lead
10 AC magneto lead
11 Carburetor breather hose
12 Starter cable
13 Fuel hose
14 Thermo switch 1 lead
15 Reverse switch lead
16 AC magneto coupler
17 Gear position switch coupler
18 Speed sensor coupler
19 Radiator fan breather hose
20 Rectifier/regulator lead
21 Water pump breather hose
A Fasten the final drive gear case breather hose, speed sensor lead, ground lead, gear position switch lead, AC magneto lead, wire harness, and reverse indicator light lead with a plastic locking tie. Be careful not to pinch the breather hose.

B Fasten the leads in the following order: ground lead, reverse switch lead, speed sensor lead, gear position switch lead, and AC magneto lead.

C Pass the final drive gear case breather hose through the hole in air duct assembly 3.

D To the rear fender

E 70 ~ 90 mm (2.8 ~ 3.5 in)

F Clamp the thermostat assembly breather hose and carburetor breather hose with the cable guide.

G Face the coupler release tab upward.
Pass the vacuum chamber breather hose through the plastic cover hole.

Insert a clamp into the third hole from the top of the rectifier/regulator bracket, and then clamp the final drive gear case breather hose with the clamp.
1. Gear position switch
2. Reverse switch
3. Crankcase breather hose
4. Select lever control cable
5. Rear brake cable
6. Front brake hose
7. Rear brake light switch lead
8. Spark plug lead
9. Fan motor breather hose
10. Fan motor lead
11. Bake fluid reservoir hose
12. Rear brake hose

A. Pass the rear brake cable and throttle cable through the cable guide.
B. Pass the rear brake light switch lead and the main switch lead and auxiliary DC jack lead over the front fender.
Clamp the spark plug lead and radiator inlet hose with a plastic clamp.
When installing the ignition coil, face the spark lead to the right side of the frame.
To the rear fender hole
Pass the brake light switch lead on the inside of the rear brake cable and select lever control cable, and through the cable guide of the brake master cylinder cover.
1. Negative battery lead
2. Tail/brake light lead
3. Fuse box
4. Four-wheel drive relay 3
5. Four-wheel drive relay 2
6. Four-wheel drive relay 1
7. Positive battery lead
8. Starter motor lead
9. Wire harness

A. Pass the tail/brake light lead through the lead guide.
B. Position the wire harness tape at the end of the rear fender guide.
C. Pass the wire harness through the cable guide of rear fender.
1. Front brake hose
2. Throttle cable
3. Thermo switch 1 lead
4. Crankcase breather hose
5. Fuel sender lead
6. Differential gear case breather hose
7. Starter cable
8. Select lever control cable
9. Wire harness
10. Fan motor breather hose

A. Pass the thermo sensor 1 lead through the lead guide.
B. Pass the crankcase breather hose through the hose guide.
C. Pass the fuel sender lead through the lead guide.
D. Pass the select lever control cable through the hole of the select lever unit bracket.
E. Clamp the starter cable with a plastic clamp.
F. Pass the throttle cable through the cable guide.
Fasten the speed sensor coupler, thermo switch 1 lead, reverse switch lead, ground lead, gear position switch lead, and AC magneto couplers with a band.
INTRODUCTION

This chapter includes all information necessary to perform recommended inspections and adjustments. These preventive maintenance procedures, if followed, will ensure more reliable vehicle operation and a longer service life. The need for costly overhaul work will be greatly reduced. This information applies to vehicles already in service as well as to new vehicles that are being prepared for sale. All service technicians should be familiar with this entire chapter.

- Recommended brake fluid: DOT 4
- Brake fluid replacement:
  1. When disassembling the master cylinder or caliper, replace the brake fluid. Normally check the brake fluid level and add fluid as required.
  2. On the inner parts of the master cylinder and caliper, replace the oil seals every two years.
  3. Replace the brake hoses every four years, or if cracked or damaged.

**WARNING**
 Indicates a potential hazard that could result in serious injury or death.

Fuel tank side panels
1. Footrest
2. Left footrest board
3. Right footrest board
4. Footrest bracket

Q'ty
1
2
4
4

Remarks
Remove the parts in the order below. Refer to “SEAT AND SIDE PANELS”.
For installation, reverse the removal procedure.
ADJUSTING THE VALVE CLEARANCE

ENGINE
ADJUSTING THE VALVE CLEARANCE

NOTE:
- The valve clearance must be adjusted when the engine is cool to the touch.
- Adjust the valve clearance when the piston is at the Top Dead Center (T.D.C.) on the compression stroke.

1. Remove:
   - Seat
   - Front carrier
   - Front fender
   - Fuel tank
   - Engine side cover
   Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

2. Remove:
   - Tappet cover (intake) ①
   - Tappet covers (exhaust) ②

3. Disconnect:
   - Spark plug cap ③

4. Remove:
   - Spark plug

5. Remove:
   - Recoil starter ①
6. Remove:
   - Timing plug ①

7. Check:
   - Valve clearance
     Out of specification → Adjust.

<table>
<thead>
<tr>
<th>Valve clearance (cold):</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intake:</td>
</tr>
<tr>
<td>0.10 ~ 0.15 mm</td>
</tr>
<tr>
<td>(0.0039 ~ 0.0059 in)</td>
</tr>
<tr>
<td>Exhaust:</td>
</tr>
<tr>
<td>0.15 ~ 0.20 mm</td>
</tr>
<tr>
<td>(0.0059 ~ 0.0079 in)</td>
</tr>
</tbody>
</table>

******************************************************************************

Checking steps:
- Turn the crankshaft counterclockwise with a wrench.
- Align the “I” mark ① on the rotor with the stationary pointer ② on the crankcase cover. When the “I” mark is aligned with the stationary pointer, the piston is at the Top Dead Center (T.D.C.).

**NOTE:**
- When the piston is at the Top Dead Center (T.D.C.) on the compression stroke, there should be clearance between the valve stem tips and their respective rocker arm adjusting screws.
- If there is no clearance, rotate the crankshaft counterclockwise one turn.

- Measure the valve clearance using a feeler gauge ③.

******************************************************************************
ADJUSTING THE VALVE CLEARANCE

8. Adjust:
   • Valve clearance

******************************************************************************

Adjustment steps:
   • Loosen the locknut ①.
   • Insert a feeler gauge ② between the adjuster end and the valve end.
   • Turn the adjuster ③ clockwise or counterclockwise with the tappet adjusting tool ④ until the proper clearance is obtained.

<table>
<thead>
<tr>
<th>Tappet adjusting tool:</th>
</tr>
</thead>
<tbody>
<tr>
<td>P/N. YM-08035, 90890-01311</td>
</tr>
</tbody>
</table>

   • Hold the adjuster to prevent it from moving and then tighten the locknut.

<table>
<thead>
<tr>
<th>Locknut:</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 Nm (1.4 m • kg, 10 ft • lb)</td>
</tr>
</tbody>
</table>

   • Measure the valve clearance.
   • If the clearance is incorrect, repeat the above steps until the proper clearance is obtained.

******************************************************************************

9. Install:
   • All removed parts

NOTE:
Install all removed parts in the reverse order of their disassembly. Note the following points.

10. Install:
   • Recoil starter ⑥ 14 Nm (1.4 m • kg, 10.1 ft • lb)
   • Spark plug ⑥ 18 Nm (1.8 m • kg, 13 ft • lb)
   • Tappet covers (exhaust) ⑥ 12 Nm (1.2 m • kg, 8.7 ft • lb)
   • Tappet cover (intake) ⑥ 10 Nm (1.0 m • kg, 7.2 ft • lb)
ADJUSTING THE VALVE CLEARANCE/ADJUSTING THE TIMING CHAIN/
ADJUSTING THE IDLING SPEED

11. Install:
- Engine side cover
- Fuel tank
- Front fender
- Front carrier
- Seat
Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

ADJUSTING THE TIMING CHAIN
Adjustment free.

ADJUSTING THE IDLING SPEED
1. Start the engine and let it warm up for several minutes.
2. Remove:
   - Seat
   - Fuel tank side panels
Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
3. Attach:
   - Tachometer
     (to the spark plug lead)

Inductive tachometer:
P/N. YU-8036-A
Engine tachometer:
P/N. 90890-03113

4. Check:
   - Engine idling speed
     Out of specification → Adjust.

Engine idling speed:
1,450 ~ 1,550 r/min
5. Adjust:
- Engine idling speed

Adjustment steps:
- Turn the throttle stop screw ① in or out until the specified idling speed is obtained.

<table>
<thead>
<tr>
<th>Turning in</th>
<th>Idling speed becomes higher.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turning out</td>
<td>Idling speed becomes lower.</td>
</tr>
</tbody>
</table>

6. Detach:
- Tachometer

7. Adjust:
- Throttle lever free play
  Refer to “ADJUSTING THE THROTTLE LEVER FREE PLAY”.

- Throttle lever free play:
  3 ~ 5 mm (0.12 ~ 0.20 in)

8. Install:
- Fuel tank side panels
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

ADJUSTING THE THROTTLE LEVER FREE PLAY

NOTE:
Engine idling speed should be adjusted properly before adjusting the throttle lever free play.
1. Check:
- Throttle lever free play ♢
  Out of specification → Adjust.

<table>
<thead>
<tr>
<th>Throttle lever free play:</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 ~ 5 mm (0.12 ~ 0.20 in)</td>
</tr>
</tbody>
</table>

2. Remove:
- Seat
- Fuel tank side panel (right)
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

3. Adjust:
- Throttle lever free play

******************************************************
Adjustment steps:
First step:
- Pull back the adjuster cover ①.
- Loosen the locknut ② on the carburetor side.
- Turn the adjuster ③ in or out until the correct free play is obtained.
- Tighten the locknut ②.
- Push in the adjuster cover ①.

| Turning in | Free play is increased. |
| Turning out | Free play is decreased. |

NOTE: If the free play cannot be adjusted here, adjust it at the throttle lever side of the cable.
Second step:
- Pull back the adjuster cover 4.
- Loosen the locknut 5.
- Turn the adjuster 6 in or out until the correct free play is obtained.

<table>
<thead>
<tr>
<th>Turning in</th>
<th>Free play is increased.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turning out</td>
<td>Free play is decreased.</td>
</tr>
</tbody>
</table>

- Tighten the locknut 5.
- Push in the adjuster cover 4.

**WARNING**
After adjusting the free play, turn the handlebar to the right and left to make sure that the engine idling speed does not increase.

4. Install:
- Fuel tank side panel (right)
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

**ADJUSTING THE SPEED LIMITER**
The speed limiter keeps the carburetor throttle from becoming fully-opened even when the throttle lever is applied to the maximum position. Screwing in the adjuster stops the engine speed from increasing.

1. Check:
- Speed limiter length 3
  Out of specification → Adjust.

**Speed limiter length:**
12 mm (0.47 in)
2. Adjust:
- Speed limiter length

*****************************************************************************

**Adjustment steps:**
- Loosen the locknut ①.
- Turn the adjuster ② in or out until the specified speed limiter length is obtained.

<table>
<thead>
<tr>
<th>Turning in</th>
<th>Speed limiter length is decreased.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turning out</td>
<td>Speed limiter length is increased.</td>
</tr>
</tbody>
</table>

- Tighten the locknut.

**WARNING**
- Particularly for a beginner rider, the speed limiter should be screwed in completely. Screw it out little by little as their riding technique improves. Never remove the speed limiter for a beginning rider.
- For proper throttle lever operation do not turn out the adjuster more than 12 mm (0.47 in). Also, always adjust the throttle lever free play to 3 ~ 5 mm (0.12 ~ 0.20 in).

*****************************************************************************
ADJUSTING THE STARTER CABLE

1. Remove:
   - Seat
   - Fuel tank side panel (left)

2. Adjust:

   ***************************************************************
   Adjustment steps:
   - Disconnect the starter cable from the carburetor body.

   NOTE: Do not remove the starter plunger from the starter cable.

   - Measure the starter plunger stroke distance of the starter lever fully close to fully open position. If the distance is out of specification adjust it as described below.

   - Pull back the boot.
   - Loosen the locknut.
   - Turn the adjuster in or out until the correct distance is obtained.
   - Tighten the locknut.
   - Push in the boot.
   - Connect the starter cable to the carburetor.

   **WARNING**
   After adjusting the cable, turn the handle-bar to right and left, and make sure that the engine idling speed does not increase.

   ***************************************************************

3. Install:
   - Fuel tank side panel (left)
   - Seat

Starter plunger stroke distance: 15 mm (0.59 in)

<table>
<thead>
<tr>
<th>Turning in</th>
<th>Distance increased.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turning out</td>
<td>Distance decreased.</td>
</tr>
</tbody>
</table>
CHECKING THE SPARK PLUG

1. Remove:
   ● Spark plug

2. Check:
   ● Spark plug type
     Incorrect → Replace.

   Standard spark plug:
   DPR8EA-9/NGK

3. Check:
   ● Electrode ①
     Wear/damage → Replace.
   ● Insulator ②
     Abnormal color → Replace.
     Normal color is a medium-to-light tan color.

4. Clean the spark plug with a spark plug cleaner or wire brush.

5. Measure:
   ● Plug gap ③
     Use a wire gauge or feeler gauge.
     Out of specification → Regap.

   Spark plug gap:
   0.8 ~ 0.9 mm (0.031 ~ 0.035 in)

6. Install:
   ● Spark plug
     18 Nm (1.8 m • kg, 13 ft • lb)

NOTE:
Before installing a spark plug, clean the gasket surface and plug surface.
**CHECKING THE IGNITION TIMING**

**NOTE:**
Engine idling speed and throttle cable free play should be adjusted properly before checking the ignition timing.

1. Remove:
   - Seat
   - Fuel tank side panel (left)
   - Engine side cover
   Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

2. Attach:
   - Tachometer
   - Timing light
     (to the spark plug lead)

3. Check:
   - Ignition timing

**Checking steps:**
- Warm up the engine and keep it at the specified speed.

**Engine speed:**
1,450 ~ 1,550 r/min

- Remove the recoil starter ①.
- Remove the timing plug ②.
- Visually check the stationary pointer ③ to verify it is within the required firing range ④ indicated on the flywheel.
  Incorrect firing range → Check the pulser coil assembly.
- Install the timing plug.
- Install the recoil starter.

**Recoil starter bolt:**
14 Nm (1.4 m • kg, 10.1 ft • lb)
LOCTITE®

---

*Inductive tachometer:*
P/N. YU-8036-A

*Engine tachometer:*
P/N. 90890-03113

*Timing light:*
P/N. YM-33277-A, 90890-03141
CHECKING THE IGNITION TIMING/MEASURING THE COMPRESSION PRESSURE

4. Detach:
   - Timing light
   - Tachometer
5. Install:
   - Engine side cover
   - Fuel tank side panel (left)
   - Seat
   Refer to "SEAT, CARRIERS, FENDERS AND FUEL TANK".

MEASURING THE COMPRESSION PRESSURE

NOTE: Insufficient compression pressure will result in a loss of performance.

1. Check:
   - Valve clearance
     Out of specification → Adjust.
     Refer to "ADJUSTING THE VALVE CLEARANCE".
2. Start the engine and let it warm up for several minutes.
3. Stop the engine.
4. Remove:
   - Spark plug
5. Attach:
   - Adapter
   - Compression gauge ①

Compression gauge:
P/N. YU-33223, 90890-03081
Adapter:
P/N. YU-33223-3, 90890-04082
6. Measure:
- Compression pressure
  Above the maximum pressure:
  Inspect the cylinder head, valve surfaces, and piston crown for carbon deposits.
  Below the minimum pressure:
  Squirt a few drops of oil into the affected cylinder and measure again.
  Refer to the table below.

### Compression pressure (with oil introduced into cylinder)

<table>
<thead>
<tr>
<th>Reading</th>
<th>Diagnosis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Higher than without oil</td>
<td>Worn or damaged pistons</td>
</tr>
<tr>
<td>Same as without oil</td>
<td>Defective ring(s), valves, cylinder head gasket or piston is possible.</td>
</tr>
</tbody>
</table>

### Compression pressure (at sea level):
- Standard:
  1,324 kPa (13.24 kg/cm², 188.31 psi)
- Minimum:
  1,150 kPa (11.5 kg/cm², 163.57 psi)
- Maximum:
  1,480 kPa (14.8 kg/cm², 210.50 psi)

**WARNING**
When cranking the engine, ground the spark plug lead to prevent sparking.

**Measurement steps:**
- Crank over the engine with the electric starter (be sure the battery is fully charged) with the throttle wide-open until the compression reading on the gauge stabilizes.

7. Install:
- Spark plug \( \leq 18 \text{ Nm (1.8 m} \cdot \text{kg, 13 ft} \cdot \text{lb)} \)
CHECKING THE ENGINE OIL LEVEL

1. Place the machine on a level surface.
2. Remove:
   - Engine side panel
   - Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
3. Check:
   - Engine oil level
   - Oil level should be between the maximum ① and minimum ② marks.
     → Oil level low → Add oil to the proper level.

**NOTE:**
Do not screw the dipstick ③ in when checking the oil level.

**Recommended oil:** Follow the left chart.

**NOTE:**
Recommended oil classification:
API Service “SE”, “SF” type or equivalent (e.g.
“SF–SE–CC”, “SF–SE–SD” etc.)

**CAUTION:**
Do not allow foreign material to enter the crankcase.

4. Start the engine and let it warm up for several minutes.
5. Stop the engine and check the oil level again.

**NOTE:**
Wait a few minutes until the oil settles before inspecting the oil level.

**WARNING**
Never remove the dipstick just after high speed operation because the heated oil could spurt out. Wait until the oil cools down before removing the dipstick.

6. Install:
   - Engine side panel
CHANGING THE ENGINE OIL

1. Start the engine and let it warm up for several minutes.
2. Stop the engine and place an oil pan under the engine.
3. Remove:
   - Seat
   - Fuel tank side panel (left)
   - Engine side cover
   Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
4. Remove:
   - Engine oil filler plug (dipstick) ①
   - Engine oil drain bolt ②
   Drain the engine oil from the crank case.

5. If the oil filter cartridge is also to be replaced, perform the following procedure.

   Replacement steps:
   - Remove the oil filter cartridge ① with an oil filter wrench ②.

   **Oil filter wrench:**
   P/N. YU-38411, 90890-01426

   - Lubricate the O-ring ③ of the new oil filter cartridge with a thin coat of engine oil.

   **CAUTION:**
   Make sure that the O-ring ③ is positioned correctly in the groove of the oil filter cartridge.

   - Tighten the new oil filter cartridge to specification with an oil filter wrench.

   **Oil filter cartridge:**
   17 Nm (1.7 m • kg, 12 ft • lb)
6. Install:
   - Engine oil drain bolt
   - [Torque: 30 Nm (3.0 m•kg, 22 ft•lb)]

7. Fill:
   - Crankcase
     (with sufficient oil to reach the specified level)
   - Refer to “CHECKING THE ENGINE OIL LEVEL”.

   ![Diagram of engine oil drain bolt]

   ![Diagram of engine oil filler plug]

   Oil quantity:
   - Periodic oil change:
     - 1.9 L (1.7 Imp qt, 2.0 US qt)
   - With oil filter replacement:
     - 2.0 L (1.8 Imp qt, 2.1 US qt)
   - Total amount:
     - 2.2 L (1.9 Imp qt, 2.3 US qt)

8. Install:
   - Engine oil filler plug

9. Warm up the engine for a few minutes, then stop the engine.

10. Check:
    - Engine
      (for engine oil leaks)
    - Oil level
      - Refer to “CHECKING THE ENGINE OIL LEVEL”.

11. Check:
    - Engine oil pressure

   **********************************************
   - Slightly loosen the oil gallery bolt.
   - Start the engine and keep it idling until engine oil starts to seep from the oil gallery bolt. If no engine oil comes out after one minute, turn the engine off so that it will not seize.
   - Check the engine oil passages, the oil filter cartridge and the oil pump for damage or leakage. Refer to “CRANKSHAFT AND OIL PUMP” in CHAPTER 4.
CHANGING THE ENGINE OIL

- Start the engine after solving the problem(s) and check the engine oil pressure again.
- Tighten the oil gallery bolt to specification.

<table>
<thead>
<tr>
<th>Oil gallery bolt:</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 Nm (0.7 m • kg, 5.1 ft • lb)</td>
</tr>
</tbody>
</table>

12. Install:
- Engine side cover
- Fuel tank side panel (left)
- Seat

Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

CLEANING THE AIR FILTER

NOTE: There is a check hose ① at the bottom of the air filter case. If dust and/or water collects in this hose, clean the air filter element and air filter case.

1. Remove:
- Seat
- Fuel tank cover

Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

2. Remove:
- Air filter case cover ①
CLEANING THE AIR FILTER

3. Remove:
- Air filter element assembly ①
- Air filter element cap ②
- Air filter element ③

**NOTE:**
When removing the air filter element, rotate the air filter element cap 1/4 of a turn and remove the element.

② Air filter element cap ③ Air filter element

**CAUTION:**
Never operate the engine with the air filter element removed. This will allow unfiltered air to enter, causing rapid wear and possible engine damage. Additionally, operation without the filter element will affect carburetor tuning with subsequent poor performance and possible engine overheating.

4. Check:
- Air filter element
  Damaged → Replace.

5. Clean:
- Air filter element

*******************************************************
**Cleaning steps:**
- Wash the element gently, but thoroughly in solvent.

⚠️ **WARNING**
Use a cleaning solvent which is designed to clean parts only. Never use gasoline or low flash point solvents as they may cause a fire or explosion.
CLEANING THE AIR FILTER/CHECKING THE COOLANT LEVEL

- Squeeze the excess solvent out of the element and let it dry.

**CAUTION:**
Do not twist or wring out the element. This could damage the foam material.

- Apply engine oil to the element.
- Squeeze out the excess oil.

**NOTE:**
The element should be wet but not dripping.

6. Install:
- Air filter element
- Air filter case cover

**NOTE:**
- Insert the lobes 1 on the filter element into the receptacles 2 on the filter case.
- To prevent air leaks make sure that the sealing surface of the element matches the sealing surface of the case.

7. Install:
- Fuel tank cover
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

CHECKING THE COOLANT LEVEL

1. Place the machine on a level surface.
2. Remove:
   - Seat
   - Fuel tank side panel (left)
CHECKING THE COOLANT LEVEL/CHANGING THE COOLANT

3. Check:
- Coolant level
  The coolant level should be between the minimum level mark ① and maximum level mark ⑤.
  Below the minimum level mark → Add the recommended coolant to the proper level.

  **CAUTION:**
  - Adding water instead of coolant lowers the antifreeze content of the coolant. If water is used instead of coolant, check and if necessary, correct the antifreeze concentration of the coolant.
  - Use only distilled water. However, soft water may be used if distilled water is not available.

4. Start the engine, warm it up for several minutes, and then turn it off.

5. Check:
- Coolant level

  **NOTE:**
  Before checking the coolant level, wait a few minutes until the coolant has settled.

6. Install:
- Fuel tank side panel (left)
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

---

CHANGING THE COOLANT

1. Remove:
- Seat
- Fuel tank side panel (left)
- Engine side cover
- Front carrier
- Front fender panel
- Coolant reservoir cover
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
- Left footrest board
  Refer to “FOOTREST BOARDS”.

2. Remove:
   - Plastic band ①
   - Coolant reservoir bolts ②
   - Coolant reservoir cap ③
3. Disconnect:
   - Coolant reservoir breather hose ④

4. Drain:
   - Coolant
     (from the coolant reservoir)
5. Connect:
   - Coolant reservoir breather hose
6. Install:
   - Coolant reservoir bolts
   - Plastic band

7. Remove:
   - Radiator cap ①

**WARNING**

A hot radiator is under pressure. Therefore, do not remove the radiator cap when the engine is hot. Scalding hot fluid and steam may be blown out, which could cause serious injury. When the engine has cooled, open the radiator cap as follows:
Place a thick rag or a towel over the radiator cap and slowly turn the radiator cap counterclockwise toward the detent to allow any residual pressure to escape. When the hissing sound has stopped, turn the radiator cap counterclockwise while pressing down on it and then remove it.

8. Remove:
   - Coolant drain bolt (water pump) ①
     (along with the copper washer)
9. Drain:
   - Coolant
10. Check:
   - Copper washer ①
   - Coolant drain bolt ②
     Damage → Replace.
11. Install:
   - Coolant drain bolt (water pump)
     10 Nm (1.0 m·kg, 7.2 ft·lb)
12. Fill:
   - Cooling system
     (with the specified amount of the recommended coolant)

**Recommended antifreeze**
High-quality ethylene glycol antifreeze containing corrosion inhibitors for aluminum engines

**Mixing ratio**
1 : 1 (antifreeze : water)

**Quantity**
- Total amount
  - 1.8 L
    (1.58 Imp qt, 1.90 US qt)
- Coolant reservoir capacity
  - 0.3 L
    (0.26 Imp qt, 0.32 US qt)

**Handling notes for coolant**
Coolant is potentially harmful and should be handled with special care.

---

**WARNING**
- If coolant splashes in your eyes, thoroughly wash them with water and consult a doctor.
- If coolant splashes on your clothes, quickly wash it away with water and then with soap and water.
- If coolant is swallowed, induce vomiting and get immediate medical attention.
**CAUTION:**
- Adding water instead of coolant lowers the antifreeze content of the coolant. If water is used instead of coolant, check, and if necessary, correct the antifreeze concentration of the coolant.
- Use only distilled water. However, soft water may be used if distilled water is not available.
- If coolant comes into contact with painted surfaces, immediately wash them with water.
- Do not mix different types of antifreeze.

13. Install:
- Radiator cap

14. Fill:
- Coolant reservoir
  (with the recommended coolant to the maximum level mark ®)
15. Install:
- Coolant reservoir cap
16. Start the engine, warm it up for several minutes, and then turn it off.

17. Check:
- Coolant level
  Refer to “CHECKING THE COOLANT LEVEL”.

**NOTE:**
Before inspecting the coolant level, wait a few minutes until the coolant has settled.

18. Install:
- Engine skid plate (rear)
- Left footrest board
  Refer to “FOOTREST BOARDS”.
- Coolant reservoir cover
- Front fender panel
- Front carrier
- Engine side cover
- Fuel tank side panel (left)
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

3 - 35
CHECKING THE COOLANT TEMPERATURE WARNING LIGHT/CHECKING THE V-BELT

CHECKING THE COOLANT TEMPERATURE WARNING LIGHT

1. Coolant temperature indicator light

CHECKING THE V-BELT

1. Remove:
   - Right footrest board
   - Crankcase cover (right)
   Refer to “PRIMARY AND SECONDARY SHEAVES” in CHAPTER 4.

2. Check:
   - V-belt
     Cracks/wear/scaling/chipping → Replace.
     Oil/grease → Check primary sheave and secondary sheave.

3. Measure:
   - V-belt width
     Out of specification → Replace.

V-belt width:
33.2 mm (1.31 in)
<Limit:> 29.9 mm (1.18 in)
4. Replace:
- V-belt

Replacing steps:
- Install the bolts 1 (90101-06016) into the secondary fixed sheave hold.

NOTE:
Tightening the bolts 1 will push the secondary sliding sheave away, causing the gap between the secondary fixed and sliding sheaves to widen.

- Remove the V-belt 1 from the primary sheave and secondary sheave.

- Install the V-belt.

NOTE: 
Install the V-belt so that its arrow faces the direction shown in the illustration.

- Remove the bolts.

CLEANING THE SPARK ARRESTER
1. Clean:
- Spark arrester

Cleaning steps:

⚠️ WARNING
- Select a well-ventilated area free of combustible materials.
- Always let the exhaust system cool before performing this operation.
- Do not start the engine when removing the tailpipe from the muffler.

- Remove the bolts 1.
- Remove the tailpipe 2 by pulling it out of the muffler.
CLEANING THE SPARK ARRESTER

- Tap the tailpipe lightly with a soft-face hammer or suitable tool, then use a wire brush to remove any carbon deposits from the spark arrester portion of the tailpipe and the inner contact surfaces of the muffler.
- Insert the tailpipe ② into the muffler and align the bolt holes.
- Insert the bolt ① and tighten it.
- Start the engine and rev it up approximately twenty times while momentarily creating exhaust system back pressure by blocking the end of the muffler with a shop towel.
- Stop the engine and allow the exhaust pipe to cool.

****************************************************
CHASSIS

ADJUSTING THE REAR BRAKE

⚠️ WARNING
Always adjust both the brake pedal and the rear brake lever whenever adjusting the rear brake.

1. Check:
   - Rear brake lever free play
     Out of specification → Adjust.

   Rear brake lever free play: 0.5 ~ 2 mm (0.02 ~ 0.08 in)

2. Check:
   - Rear brake pedal height
     Out of specification → Adjust.

   Rear brake pedal height: 45 mm (1.77 in)

3. Adjust:
   - Rear brake lever free play
   - Rear brake pedal height

   Adjustment steps:
   - Loosen the locknut (handlebar) ① and fully screw in the brake lever cable adjuster (handlebar) ②.
   - Remove the rear brake master cylinder cover ③.
Loosen the locknut ④.

Turn the adjusting bolt ⑤ until the brake pedal height is within the specified limits.

**Rear brake pedal height:**
45 mm (1.77 in)

 Tighten the locknut ④.

**NOTE:**
When adjusting the brake pedal height make sure the locknut-to-adjusting bolt clearance ⑥ does not exceed 2 mm (0.08 in).

Loosen the locknut ⑥.

Pull up the brake outer cable and turn the brake cable adjusting (nut) ⑦ until the clearance ⑧ is within the specified limits.

**Clearance ⑧:**
1 mm (0.04 in)

**NOTE:**
Make sure the pin ⑧ is all the way to the right of the link plate hole.

Hold the adjusting nut ⑦ and tighten the locknut ⑤.

Turn the brake lever cable adjuster (handlebar) ② until the rear brake lever free play ④ is within the specified limits.

**Rear brake lever free play:**
0.5 ~ 2 mm (0.02 ~ 0.08 in)

Tighten the locknut (handlebar) ①.
ADJUSTING THE REAR BRAKE/ CHECKING THE BRAKE FLUID LEVEL

- Adjust the select lever control cable. Refer to “ADJUSTING THE SELECT LEVER CONTROL CABLE AND SHIFT ROD”.
- Install the rear brake master cylinder cover.

**WARNING**

After this adjustment is performed, lift the front and rear wheels off the ground by placing a block under the engine, and spin the rear wheels to ensure there is no brake drag. If any brake drag is noticed perform the above steps again.

CHECKING THE BRAKE FLUID LEVEL

1. Place the machine on a level surface.

**NOTE:**

When inspecting the brake fluid level, make sure that the top of the brake fluid reservoir top is horizontal.

2. Remove:
- Rear brake master cylinder cover ①

3. Check:
- Brake fluid level
  
  Fluid level is under “LOWER” level line ① → Fill up.

<table>
<thead>
<tr>
<th>Recommended brake fluid: DOT 4</th>
</tr>
</thead>
</table>

A Front brake  
B Rear brake

**CAUTION:**

Brake fluid may erode painted surfaces or plastic parts. Always clean up spilled fluid immediately.
WARNING

- Use only the designed quality brake fluid; otherwise, the rubber seals may deteriorate, causing leakage and poor brake performance.
- Refill with the same type of brake fluid; mixing fluids may result in a harmful chemical reaction and lead to poor performance.
- Be careful that water does not enter the master cylinder when refilling. Water will significantly lower the boiling point of the fluid and may result in a vapor lock.

4. Install: (rear brake)
- Front fender panel
- Front carrier
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

CHECKING THE BRAKE FLUID LEVEL

Use only the designed quality brake fluid: otherwise, the rubber seals may deteriorate, causing leakage and poor brake performance.

Refill with the same type of brake fluid; mixing fluids may result in a harmful chemical reaction and lead to poor performance.

Be careful that water does not enter the master cylinder when refilling. Water will significantly lower the boiling point of the fluid and may result in a vapor lock.

4. Install: (rear brake)
- Front fender panel
- Front carrier
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

CHECKING THE BRAKE FLUID LEVEL
CHECKING THE FRONT BRAKE PAD
1. Remove:
   - Front wheels
2. Check:
   - Brake pad
     Wear indicators ① almost touch the brake disc → Replace the brake pads as a set.
     Refer to “FRONT AND REAR BRAKES” in CHAPTER 8.

   Brake pad wear limit ②:
   1 mm (0.04 in)

3. Operate the brake lever.
4. Install:
   - Front wheels

CHECKING THE REAR BRAKE PAD
1. Remove:
   - Rear wheel (left)
2. Check:
   - Brake pad
     Wear indicator groove ① almost disappeared → Replace the brake pads as a set.
     Refer to “FRONT AND REAR BRAKES” in CHAPTER 8.

   Brake pad wear limit ②:
   1 mm (0.04 in)

3. Operate the brake lever or brake pedal.
4. Install:
   - Rear wheel (left)

CHECKING THE BRAKE HOSE
1. Remove:
   - Seat
   - Front carrier
   - Front fender
     Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
   - Right footrest board
     Refer to “FOOTREST BOARDS”.

   Right footrest board
2. Check:
- Front brake hoses ①
- Rear brake hoses ②
  Cracks/wear/damage → Replace.
  Fluid leakage → Replace the hose.
  Refer to “FRONT AND REAR BRAKES” in CHAPTER 8.

NOTE: Hold the machine in an upright position and apply the front or rear brake.

3. Check:
- Brake hose clamp
  Loosen → Tighten.

4. Install:
- Right footrest board
  Refer to “FOOTREST BOARDS”.
- Front fender
- Front carrier
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

**BLEEDING THE HYDRAULIC BRAKE SYSTEM**

⚠️ **WARNING**
Bleed the brake system if:
- The system has been disassembled.
- A brake hose or brake pipe have been loosened or removed.
- The brake fluid has been very low.
- The brake operation has been faulty.
A loss of braking performance may occur if the brake system is not properly bled.
BLEEDING THE HYDRAULIC BRAKE SYSTEM

1. Bleed:
   ● Brake system

*******************************************************************************

Air bleeding steps:
   a. Add the proper brake fluid to the reservoir.
   b. Install the diaphragm. Be careful not to spill any fluid or allow the reservoir to overflow.
   c. Connect the clear plastic hose (1) tightly to the caliper bleed screw (2).

   A Front
   B Rear

d. Place the other end of the hose into a container.
   e. Slowly apply the brake lever or pedal several times.
   f. Pull the lever in or push down on the pedal and hold it.
   g. Loosen the bleed screw and allow the lever or pedal to travel towards its limit.
   h. Tighten the bleed screw when the lever or pedal limit has been reached, then release the lever or pedal.
   i. Repeat steps (e) to (h) until all the air bubbles have disappeared from the fluid.
   j. Tighten the bleed screw.

<table>
<thead>
<tr>
<th>Bleed screw:</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 Nm (0.6 m • kg, 4.3 ft • lb)</td>
</tr>
</tbody>
</table>

NOTE: If bleeding is difficult, it may be necessary to let the brake fluid settle for a few hours. Repeat the bleeding procedure when the tiny bubbles in the system have disappeared.

k. Add brake fluid to the proper level.
   Refer to “CHECKING THE BRAKE FLUID LEVEL”.

⚠️ WARNING
Check the operation of the brake after bleeding the brake system.

*******************************************************************************
ADJUSTING THE SELECT LEVER CONTROL CABLE AND SHIFT ROD

1. NEUTRAL
2. HIGH
3. LOW
4. REVERSE
5. PARK
6. Control cable
7. Select lever shift rod

**WARNING**
Before moving the select lever, bring the machine to a complete stop and return the throttle lever to its closed position. Otherwise the transmission may be damaged.

1. Adjust:
   - Rear brake pedal free play
     Refer to “ADJUSTING THE REAR BRAKE”.

2. Adjust:
   - Select lever control cable
   - Select lever shift rod

**Adjustment steps:**
**Control cable:**
- Make sure the select lever is in NEUTRAL.
- Adjust the control cable so there is zero free play in the cable. When the adjustment is correct, slack in the return spring ① will be taken up.

**NOTE:**
In some cases it will be necessary to further adjust the cable with the locknuts ② arrangement that holds the cable to its mount.

- When the brake begins to work “③ = 25 ~ 40 mm (1.0 ~ 1.6 in)”, verify that the select lever can be shifted to REVERSE from NEUTRAL, to PARK from REVERSE and to NEUTRAL from REVERSE.
- Before the brake begins to work “③ = 0 ~ 25 mm (0 ~ 1.0 in)”, verify that the select lever cannot be shifted to REVERSE from NEUTRAL, to REVERSE from PARK and to NEUTRAL from REVERSE.
ADJUSTING THE SELECT LEVER CONTROL CABLE AND SHIFT ROD/
ADJUSTING THE REAR BRAKE LIGHT SWITCH

Check that locknuts are tightened correctly.
If the operation of the select lever is incorrect, adjust the select lever control cable with the adjuster.

Select lever shift rod:
Make sure the select lever is in NEUTRAL.
Loosen both locknuts.
Adjust the shift rod length for smooth and correct shifting.
Tighten the locknuts.

ADJUSTING THE REAR BRAKE LIGHT SWITCH

NOTE: The rear brake light switch is operated by movement of the brake pedal.
The rear brake light switch is properly adjusted when the brake light comes on just before the braking effect starts.

1. Check:
   - Rear brake light operation timing
     Incorrect → Adjust.
2. Adjust:
   - Rear brake light operation timing

Hold the main body of the rear brake light switch so that it does not rotate and turn the adjusting nut in direction or until the rear brake light comes on at the proper time.

<table>
<thead>
<tr>
<th>Direction</th>
<th>Brake light comes on sooner.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direction</td>
<td>Brake light comes on later.</td>
</tr>
</tbody>
</table>

*******************************************************************************
CHECKING THE FINAL GEAR OIL LEVEL
1. Place the machine on a level place.
2. Loosen:
   • Oil check bolt ①

NOTE:
• Loosen the slightly.
• Do not remove the bolt, otherwise the gear oil may come out.

3. Check:
   Check that gear oil seeps out from where the check bolt was loosened. If no gear oil seeps out, change the final gear oil. Refer to “CHANGING THE FINAL GEAR OIL”.

CHANGING THE FINAL GEAR OIL
1. Place the machine on a level surface.
2. Place a container under the final gear case to collect the used oil.

3. Remove:
   • Oil filler bolt
   • Drain plug ①
4. Drain:
   • Final gear oil

5. Install:
   • Drain plug 23 Nm (2.3 m•kg, 16 ft•lb)

NOTE:
Check the gasket (drain plug). If it is damaged, replace it with a new one.
6. Fill:
   - Final gear case

   **Periodic oil change:**
   0.28 L (0.25 Imp qt, 0.30 US qt)
   **Total amount:**
   0.33 L (0.29 Imp qt, 0.35 US qt)
   **Recommended oil:**
   SAE 80 API “GL-4” Hypoid gear oil

   **CAUTION:**
   Take care not to allow foreign material to enter the final gear case.

7. Install:
   - Oil filler bolt **23 Nm (2.3 m•kg, 16 ft•lb)**

---

**CHECKING THE DIFFERENTIAL GEAR OIL**

1. Place the machine on a level surface.
2. Remove:
   - Oil filter bolt ①
3. Check:
   - Oil level
     Oil level should be up to the brim of hole.
     Oil level low → Add oil to proper level.

   **Recommended oil:**
   SAE 80 API “GL-4” Hypoid gear oil

   **Oil quantity (periodic oil change):**
   0.28 L (0.25 Imp qt, 0.30 US qt)

   **CAUTION:**
   Take care not to allow foreign material to enter the differential gear case.

4. Install:
   - Oil filter bolt **23 Nm (2.3 m•kg, 16 ft•lb)**
CHANGING THE DIFFERENTIAL GEAR OIL

1. Place the machine on a level surface.
2. Place a receptacle under the differential gear case.
3. Remove:
   - Oil filler bolt
   - Drain plug ①
4. Drain:
   - Differential gear oil
5. Install:
   - Drain plug 10 Nm (1.0 m • kg, 7.2 ft • lb)

NOTE:
Check the gasket (drain plug). If it is damaged, replace it with new one.

6. Fill:
   - Differential gear case

    Periodic oil change:
    0.28 L (0.25 Imp qt, 0.30 US qt)
    Total amount:
    0.33 L (0.29 Imp qt, 0.35 US qt)
    Recommended oil:
    SAE 80 API “GL-4” Hypoid gear oil

NOTE:
If gear oil is filled to the brim of the oil filler hole, oil may start leaking from the differential gear case breather hose. Therefore, check the quantity of the oil, not its level.

CAUTION:
Take care not to allow foreign material to enter the differential gear case.

7. Install:
   - Oil filler bolt 23 Nm (2.3 m • kg, 16 ft • lb)
CHECKING THE CONSTANT VELOCITY JOINT DUST BOOT

1. Check:
   - Dust boots ①
     Damage → Replace.
   Refer to “FRONT CONSTANT VELOCITY JOINTS AND DIFFERENTIAL GEAR” in CHAPTER 7.

CHECKING THE STEERING SYSTEM

1. Place the machine on a level surface.
2. Check:
   - Steering assembly bushings
     Move the handlebar up and down, and/or back and forth.
     Excessive play → Replace the steering stem bushings.

3. Check:
   - Tie-rod ends
     Turn the handlebar to the left and/or right until it stops completely, then move the handlebar from the left to the right slightly. Tie-rod end has any vertical play → Replace the tie-rod end(s).

4. Raise the front end of the machine so that there is no weight on the front wheels.
5. Check:
   - Ball joints and/or wheel bearings
     Move the wheels laterally back and forth.
     Excessive free play → Replace the front arms (upper and lower) and/or wheel bearings.

ADJUSTING THE TOE-IN

1. Place the machine on a level surface.
2. Measure:
   - Toe-in
     Out of specification → Adjust.

Toe-in:
0 ~ 10 mm (0.00 ~ 0.39 in)
(with tire touching the ground)
ADJUSTING THE TOE-IN

Measurement steps:

NOTE: Before measuring the toe-in, make sure that the tire pressure is correct.

- Mark both front tire tread centers.
- Face the handlebar straight ahead.
- Measure the width A between the marks.
- Rotate the front tires 180° until the marks are exactly opposite one another.
- Measure the width B between the marks.
- Calculate the toe-in using the formula given below.

\[
\text{Toe-in} = B - A
\]

- If the toe-in is incorrect, adjust it.

3. Adjust:
- Toe-in

**WARNING**
- Be sure that both tie-rods are turned the same amount. If not, the machine will drift right or left even though the handlebar is positioned straight. This may lead to mishandling and an accident.
- After setting the toe-in to specification, run the machine slowly for some distance with both hands lightly holding the handlebar and check that the handlebar responds correctly. If not, turn either the right or left tie-rod within the toe-in specification.
ADJUSTING THE TOE-IN/
ADJUSTING THE FRONT SHOCK ABSORBER

Adjustment steps:

- Mark both tie-rods ends. This reference point will be needed during adjustment.
- Loosen the locknuts (tie-rod end) ① of both tie-rods.
- The same number of turns should be given to both the right and left tie-rods ② until the specified toe-in is obtained. This is to keep the length of the rods the same.
- Tighten the rod end locknuts of both tie rods.

**NOTE:** Adjust the rod ends so that A and B are equal.

ADJUSTING THE FRONT SHOCK ABSORBER

**WARNING**
Always adjust both front shock absorber spring preload to the same setting. Uneven adjustment can cause poor handling and loss of stability.

1. Adjust:
- Spring preload
  Turn the adjuster ① to increase or decrease the spring preload.

**Standard position:** 2
**Minimum (Soft) position:** 1
**Maximum (Hard) position:** 5
ADJUSTING THE REAR SHOCK ABSORBER

1. Remove:
   - Rear wheels

2. Adjust:
   - Spring preload
     Turn the adjuster (1) to increase or decrease the spring preload.

NOTE:
The spring preload of the rear shock absorber can be adjusted to suit the rider’s preference, weight, and the riding conditions.

3. Install:
   - Rear wheels

CHECKING THE TIRE

WARNING
This model is equipped with low pressure tires. It is important that they be inflated correctly and maintained at the proper pressures.

- TIRE CHARACTERISTICS
  1) Tire characteristics influence the handling of ATV’s. The tires listed below have been approved by Yamaha Motor Co., Ltd. for this model. If other tire combinations are used, they can adversely affect your machine’s handling characteristics and are therefore not recommended.

<table>
<thead>
<tr>
<th>Manufacturer</th>
<th>Size</th>
<th>Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front</td>
<td>DUNLOP</td>
<td>AT25 × 8-12</td>
</tr>
<tr>
<td>Rear</td>
<td>DUNLOP</td>
<td>AT25 × 10-12</td>
</tr>
</tbody>
</table>
TIRE PRESSURE

1) Recommended tire pressure
   Front 35 kPa (0.35 kg/cm², 5.0 psi)
   Rear 30 kPa (0.30 kg/cm², 4.3 psi)

2) Tire pressure below the minimum specification could cause the tire to dislodge from the rim under severe riding conditions.

   The following are minimums:
   Front 32 kPa (0.32 kg/cm², 4.6 psi)
   Rear 27 kPa (0.27 kg/cm², 3.9 psi)

3) Use no more than
   Front 250 kPa (2.5 kg/cm², 36 psi)
   Rear 250 kPa (2.5 kg/cm², 36 psi)

   when seating the tire beads. Higher pressures may cause the tire to burst.

   Inflate the tires slowly and carefully.
   Fast inflation could cause the tire to burst.

MAXIMUM LOADING LIMIT

1) Vehicle load limit (total weight of cargo, rider and accessories, and tongue weight): 220 kg (485 lb)

2) Front carrier: 45 kg (99 lb)

3) Rear carrier: 85 kg (187 lb)

4) Storage box: 2.0 kg (4.4 lb)

5) Trailer hitch:
   Pulling load (total weight of trailer and cargo): 550 kg (1,212 lb)
   Tongue weight (vertical weight on trailer hitch point): 15 kg (33 lb)

   Be extra careful of the machine balance and stability when towing a trailer.

1. Measure:
   • Tire pressure (cold tire pressure)
     Out of specification → Adjust.

   NOTE: ____________________________
   • The low-pressure tire gauge ① is included as standard equipment.
   • If dust or the like is stuck to this gauge, it will not provide the correct readings. Therefore, take two measurements of the tire's pressure and use the second reading.
**CHECKING THE TIRE/CHECKING THE WHEEL**

<table>
<thead>
<tr>
<th>Cold tire pressure</th>

**WARNING**
Uneven or improper tire pressure may adversely affect the handling of this machine and may cause loss of control.

- Maintain proper tire pressures.
- Set tire pressures when the tires are cold.
- Tire pressures must be equal in both front tires and equal in both rear tires.

2. Check:
- Tire surfaces

Wear/damage → Replace.

![Tire wear limit](image)

**WARNING**
It is dangerous to ride with a worn-out tire. When tire wear is out of specification, replace the tire immediately.

**CHECKING THE WHEEL**

1. Check:
- Wheels

Damage/bends → Replace.

**NOTE:**
Always balance the wheel when a tire or wheel has been changed or replaced.
CHECKING THE WHEEL/CHECKING AND LUBRICATING THE CABLE/LUBRICATING THE LEVERS, PEDAL, ETC.

**WARNING**
- Never attempt even small repairs to the wheel.
- Ride conservatively after installing a tire to allow it to seat itself properly on the rim.

**CHECKING AND LUBRICATING THE CABLE**

**WARNING**
A damaged cable sheath may cause corrosion and interfere with the cable movement. An unsafe condition may result so replace a damaged cable as soon as possible.

1. Check:
   - Cable sheath
     Damage → Replace.
2. Check:
   - Cable operation
     Unsmooth operation → Lubricate or replace.

<table>
<thead>
<tr>
<th>Recommended lubricant:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yamaha chain and cable lube or Engine oil</td>
</tr>
</tbody>
</table>

**NOTE:**
Hold the cable end up and apply several drops of lubricant to the cable.

3. Apply:
   - Lithium soap base grease
    (onto end of the cable)

**LUBRICATING THE LEVERS, PEDAL, ETC.**

1. Lubricate the pivoting parts.

<table>
<thead>
<tr>
<th>Recommended lubricant:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yamaha chain and cable lube or Engine oil</td>
</tr>
</tbody>
</table>
NOTE: Since the MF battery is a sealed type battery, it is not possible to measure the specific gravity of the electrolyte in order to check the charge state of the battery. Therefore the charge of the battery has to be checked by measuring the voltage at the battery terminals.

CAUTION: CHARGING METHOD
- This is a sealed type battery. Never remove the sealing caps. If the sealing caps have been removed, the balance will not be maintained and battery performance will deteriorate.
- Charging time, charging current and charging voltage for the MF battery are different from those of general type batteries. The MF battery should be charged as explained in “CHARGING METHOD”. If the battery is overcharged, the electrolyte level will drop considerably. Therefore, take special care when charging the battery.

WARNING
Battery electrolyte is dangerous; it contains sulfuric acid which is poisonous and highly caustic.
Always follow these preventive measures:
- Avoid bodily contact with electrolyte as it can cause severe burns or permanent eye injury.
- Wear protective eye gear when handling or working near batteries.
Antidote (EXTERNAL):
- SKIN - Wash with water.
- EYES - Flush with water for 15 minutes and get immediate medical attention.
Antidote (INTERNAL):
- Drink large quantities of water or milk followed with milk of magnesia, beaten egg or vegetable oil. Get immediate medical attention.
CHECKING THE BATTERY

Batteries generate explosive hydrogen gas. Always follow these preventive measures:
• Charge batteries in a well-ventilated area.
• Keep batteries away from fire, sparks or open flames (e.g., welding equipment, lighted cigarettes, etc.)
• **DO NOT SMOKE** when charging or handling batteries.
**KEEP BATTERIES AND ELECTROLYTE OUT OF REACH OF CHILDREN.**

1. Remove:
   • Seat
   • Battery holding bracket
   • Battery lead cover
   Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

2. Disconnect:
   • Battery leads

   **CAUTION:**
   First disconnect the negative lead ①, then disconnect the positive lead ②.

3. Remove:
   • Battery

4. Check:
   • Battery condition

   ********************************************
   **Checking steps:**
   • Connect a digital voltmeter to the battery terminals.

   **Tester (+) lead → battery (+) terminal**
   **Tester (−) lead → battery (−) terminal**

   **NOTE:**
   The charge state of an MF battery can be checked by measuring the open-circuit voltage (i.e. the voltage when the positive terminal is disconnected).

<table>
<thead>
<tr>
<th>Open-circuit voltage</th>
<th>Charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.8 V or higher</td>
<td>No charging is necessary.</td>
</tr>
</tbody>
</table>
CHECKING THE BATTERY

- Check the condition of the battery using the following charts.

**Example:**
- Open-circuit voltage = 12.0 V
- Charging time = 6.5 hours
- Charge condition of the battery = 20 ~ 30%
- Charging method for MF batteries

**CAUTION:**
- Do not attempt to set the standard charging current unless the battery can accept this current.
- Never exceed the maximum charging time.
- Charging time must be within the range specified in the instruction manual.
- Before removing the clips from the battery terminals, be sure to turn off the charger's power switch.
- The open-circuit voltage variation for the MF battery, after charging, is shown below. As shown in the figure, the open-circuit voltage stabilizes about 30 minutes after charging has been completed. Therefore, wait 30 minutes after charging is completed before measuring the open-circuit voltage.
Charging method using a variable voltage charger

Measure the open-circuit voltage prior to charging.

Connect a charger and ammeter to the battery and start charging.

Is the amperage higher than the standard charging amperage written on the battery?

Adjust the charging voltage to 20 ~ 25 V.

Monitor the amperage for 3 ~ 5 minutes. Is the standard charging amperage exceeded?

If the amperage does not exceed the standard charging amperage after 5 minutes, replace the battery.

If the required charging time exceeds 5 hours, it is advisable to check the charging amperage after 5 hours. If there is any change in the amperage, readjust the voltage to obtain the standard charging amperage.

Leave the battery unused for more than 30 minutes before measuring its open-circuit voltage.

12.8 V → Charging is complete.
12.0 ~ 12.7 V → Recharging is required.
Under 12.0 V → Replace the battery.
CHECKING THE BATTERY

Charging method using a constant voltage charger

Measure the open-circuit voltage prior to charging.

Connect a charger and ammeter to the battery and start charging.

Is the amperage higher than the standard charging amperage written on the battery?

**YES**

Charge the battery until the charging voltage reaches 15 V.

**NOTE:**
Set the charging time to a maximum of 20 hours.

**CAUTION:**
Constant amperage chargers are not suitable for charging MF batteries.

**NO**

This type of battery charger cannot charge an MF battery. A variable voltage charger is recommended.

Leave the battery unused for more than 30 minutes before measuring its open-circuit voltage.

12.8 V → Charging is complete.
12.0 ~ 12.7 V → Recharging is required.
Under 12.0 V → Replace the battery.
5. Check:
- Battery terminals
  Dirty → Clean with a wire brush.
  Poor connection → Correct.

**NOTE:**
After cleaning the terminals, apply a light coat of grease.

6. Install:
- Battery
7. Connect:
- Battery leads

**CAUTION:**
First, connect the positive lead ①, then connect the negative lead ②.

8. Install:
- Battery lead cover
- Battery holding bracket
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

---

**CHECKING THE FUSE**

**CAUTION:**
Always turn off the main switch when checking or replacing a fuse. Otherwise, a short circuit may occur.

1. Remove:
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.
2. Inspect:
- Fuses

*******************************************************************************

**Checking steps:**
- Connect the pocket tester to the fuse and check it for continuity.
CHECKING THE FUSE

NOTE:
Set the tester to the “Ω x 1” position.

Pocket tester:
P/N. YU-03112, 90890-03112

- If the tester indicates o, replace the fuse.

*****************************************************

3. Replace:
- Blown fuse

*****************************************************

Replacement steps:
- Turn off the ignition.
- Install a new fuse of the proper amperage.
- Turn on switches to verify operation of the related electrical devices.
- If the fuse immediately blows again, check the electrical circuit.

*****************************************************

⚠️ WARNING
Never use a fuse with a rating other than that specified. Never use other materials in place of a fuse. An improper fuse may cause extensive damage to the electrical system, a malfunction of the lighting and ignition systems and could possibly cause a fire.
4. Install:
- Seat
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

---

**ADJUSTING THE HEADLIGHT BEAM**

1. Adjust:
- Headlight beam (vertically)
  
  Turn the adjuster ① in or out.

<table>

**CHANGING THE HEADLIGHT BULB**

1. Remove:
- Front carrier
- Front fender panel
  
  Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

2. Disconnect:
- Headlight lead couplers ①

3. Remove:
- Cover ①
4. Remove:
- Cover ①
- Bulb holder ②
- Bulb

**NOTE:**
Turn the bulb holder counterclockwise and remove the defective bulb.

**WARNING**
Keep flammable products and your hands away from the bulb while it is on, since it will be hot. Do not touch the bulb until it cools down.

5. Install:
- Bulb [New]
  Secure the new bulb with the headlight unit.

**CAUTION:**
Avoid touching the glass part of the bulb. Keep it free from oil; otherwise, the transparency of the glass, life of the bulb, and luminous flux will be adversely affected. If oil gets on the bulb, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

6. Install:
- Bulb holder
- Cover
- Cover

7. Connect:
- Headlight lead couplers

8. Install:
- Front fender panel
- Front carrier

Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK”.

# ENGINE REMOVAL

## AIR DUCTS, MUFFLER AND EXHAUST PIPE

Remove the parts in the order below.

- **Engine oil**
  - Drain.
  - Refer to “CHANGING THE ENGINE OIL” in CHAPTER 3.

- **Engine side panel/engine side cover**
  - Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK” in CHAPTER 3.

- **Front and rear fender/footrest boards**

- **Fuel tank/rubber cover**

- **Carburetor assembly**
  - Refer to “CARBURETOR” in CHAPTER 6.

</table>

**NOTE:** Remove the engine assembly from the left side of the machine.

**CAUTION:** Install all of the bolts/nuts and then tighten them to full torque specifications.

Refer to “INSTALLING THE ENGINE”.

For installation, reverse the removal procedure.
INSTALLING THE ENGINE

1. Install:
   - Engine mounting bolt (front) ①
   - Rubber damper (front) ②
   - Rubber damper nut (rear) ③
   - Engine assembly ④
   - Engine mounting bolt (rear lower)/nut ⑤
   - Engine mounting bolt (rear upper) ⑥
   - Rubber damper nut (front) ⑦

**NOTE:**
Do not fully tighten the bolts and nuts.

2. Tighten:
   - Engine mounting bolt (front) ① 33 Nm (3.3 m•kg, 24 ft•lb)
   - Rubber damper nut (rear) ③ 42 Nm (4.2 m•kg, 30 ft•lb)
   - Engine mounting bolt (rear lower) ⑤ 56 Nm (5.6 m•kg, 40 ft•lb)
   - Engine mounting bolt (rear upper) ⑥ 10 Nm (1.0 m•kg, 7.2 ft•lb)
   - Rubber damper nut (front) ⑦ 42 Nm (4.2 m•kg, 30 ft•lb)
Removing the cylinder head cover

Remove the parts in the order below.

1. Union bolt
2. Copper washer
3. Oil delivery pipe 3
4. Oil delivery pipe 2
5. Spark plug
6. Tappet cover (intake)
7. Tappet cover (exhaust)

Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK” in CHAPTER 3.

Refer to “ADJUSTING THE VALVE CLEARANCE” in CHAPTER 3.

Refer to “ENGINE REMOVAL”.

<table>
<thead>
<tr>

### CYLINDER HEAD COVER

**Order** | **Job name/Part name** | **Q'ty** | **Remarks**
---|---|---|---
8 | Cylinder head cover | 1 | Refer to “REMOVING/INSTALLING THE CYLINDER HEAD COVER”.
9 | Dowel pin | 2 | For installation, reverse the removal procedure.

**Torque Specifications:***
- 10 Nm (1.0 m·kg, 7.2 ft·lb)
- 7 Nm (0.7 m·kg, 5.1 ft·lb)
- 10 Nm (1.0 m·kg, 7.2 ft·lb)
- 20 Nm (2.0 m·kg, 14 ft·lb)
- 18 Nm (1.8 m·kg, 13 ft·lb)
- 12 Nm (1.2 m·kg, 8.7 ft·lb)
- 35 Nm (3.5 m·kg, 25 ft·lb)
**REMOVING THE CYLINDER HEAD COVER**

1. **Align:**
   - “I” mark (with stationary pointer)

   *****************************************************************************

   **Checking steps:**
   - Turn the crankshaft counterclockwise with a wrench.
   - Align the “I” mark ① on the rotor with the stationary pointer ② on the crankcase cover. When the “I” mark is aligned with the stationary pointer, the piston is at the Top Dead Center (T.D.C.).

   **NOTE:**
   - When the piston is at the top dead center (T.D.C.) on the compression stroke, there should be clearance between the valve stem tips and their respective rocker arm adjusting screws.
   - If there is no clearance, rotate the crankshaft counterclockwise one turn.

   *****************************************************************************

2. **Remove:**
   - Cylinder head cover

   **NOTE:**
   Loosen each bolt 1/4 of a turn at a time, in stages and in a crisscross pattern. After all the bolts are loosened, remove them.

---

**CHECKING THE CYLINDER HEAD COVER**

1. **Check:**
   - Cylinder head cover

   Cracks/damage → Replace the cylinder head cover and cylinder head as a set.
CHECKING THE TAPPET COVER
1. Check:
   - Tappet cover (intake) ①
   - Tappet cover (exhaust) ②
     Cracks/damage → Replace.
   - O-ring ③ New

INSTALLING THE CYLINDER HEAD COVER
1. Apply:
   - Sealant (Quick Gasket®) ①
     (to the mating surfaces of the cylinder head and cylinder head cover)

   Sealant (Quick Gasket®) ①:
P/N. ACC-11001-05-01
Yamaha bond No. 1215:
P/N. 90890-85505

2. Install:
   - Cylinder head cover
   - Washers ①
   - Bolts
     ① Bolt: \( \varnothing = 25 \text{ mm} \)
     ② Bolt: \( \varnothing = 40 \text{ mm} \)
     ③ Bolt: \( \varnothing = 55 \text{ mm} \)
     ④ Bolt: \( \varnothing = 115 \text{ mm} \)
     ⑤ Bolt: \( \varnothing = 130 \text{ mm} \)

   **NOTE:**
   Tighten the cylinder head cover bolts in stages, using a crisscross pattern.
## Removing the rocker arm

Cylinder head cover

<table>

<td></td>
</tr>
<tr>
<td>8</td>
<td>Rocker arm 1</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>Rocker arm 2</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>
For installation, reverse the removal procedure.
REMOVING THE ROCKER ARM
1. Remove:
   - Rocker arm shafts
   - Rocker arms

NOTE:
Use a slide hammer bolt and weight to remove the rocker arm shafts.

Slide hammer set:
P/N. YU-01083-A
Slide hammer bolt (M6):
P/N. 90890-01083
Weight:
P/N. 90890-01084

CHECKING THE ROCKER ARM
1. Check:
   - Rocker arm lobes
   - Valve adjusters
     Blue discoloration/pitting/scratches → Replace.
2. Check:
   - Rocker arms
   - Rocker arm shafts
     Damage/wear → Replace.

Checking steps:
- Check the two contact areas on the rocker arms for signs of abnormal wear.
  1) Rocker arm shaft hole.
  2) Camshaft lobe contact surface.
     Excessive wear → Replace.
- Check the surface of the rocker arm shafts.
  Blue discoloration/pitting/scratches → Replace/check lubrication.
- Measure the inside diameter of the rocker arm holes.
  Out of specification → Replace.

Rocker arm inside diameter:
12.000 ~ 12.018 mm
(0.4724 ~ 0.4731 in)
ROCKER ARMS

- Measure the outside diameter \( b \) of the rocker arm shafts.
  
  Out of specification → Replace.

Rocker arm shaft outside diameter:

\[
11.976 ~ 11.991 \text{ mm} \\
(0.4715 ~ 0.4721 \text{ in})
\]

- Calculate the clearance by subtracting the rocker arm shaft outside diameter from the rocker arm inside diameter.
  
  Clearance greater than 0.08 mm (0.003 in) → Replace the defective part(s).

Rocker arm to shaft standard clearance:

\[
0.009 ~ 0.042 \text{ mm} \\
(0.0004 ~ 0.0017 \text{ in})
\]

INSTALLED THE ROCKER ARM

1. Apply:
   - Engine oil
     (onto the rocker arm shafts)

2. Install:
   - Rocker arms ①
   - Rocker arm shafts ②

NOTE:

- The thread hole ③ of the rocker arm shaft must face to the outside.
- After installation, make sure that the thread hole ③ of the rocker arm shaft is positioned correctly, as shown in the illustration.
## Removing the camshaft and cylinder head

Remove the parts in the order below.

- Seat/front fender
- Fuel tank/plastic covers
- Carburetors
- Thermostat
- Thermostat assembly breather hose
- Muffler/exhaust pipe
- Thermo switch lead
- Cylinder head cover

<table>

For installation, reverse the removal procedure.
REMOVING THE CAMSHAFT AND CYLINDER HEAD

1. Loosen:
   - Camshaft sprocket bolts

2. Loosen:
   - Timing chain tensioner cap bolt

3. Remove:
   - Timing chain tensioner
   - Timing chain guide (exhaust)
   - Decompressor cam guide plates
   - Camshaft sprocket
   - Camshaft

**NOTE:**
- Fasten a safety wire to the timing chain to prevent it from falling into the crankcase.
- When removing the camshaft sprocket, it is not necessary to separate the timing chain.

4. Remove:
   - Cylinder head

**NOTE:**
- Loosen the bolts in the proper sequence.
- Follow the numerical order shown in the illustration. Loosen each bolt 1/4 of a turn at a time until all of the bolts are loose.
CHECKING THE CAMSHAFT
1. Check:
   - Cam lobes
     Pitting/scratches/blue discoloration → Replace.
2. Measure:
   - Cam lobes length a and b.
     Out of specification → Replace.

Camshaft lobe limit:
Intake:
   a 35.59 mm (1.4012 in)
   b 29.96 mm (1.1795 in)
Exhaust:
   a 36.40 mm (1.4331 in)
   b 30.01 mm (1.1815 in)

CHECKING THE CAMSHAFT SPROCKET
1. Check:
   - Camshaft sprocket
     Wear/damage → Replace the camshaft sprocket and timing chain as a set.
   a 1/4 of a tooth
   b Correct
   ① Timing chain
   ② Sprocket

CHECKING THE DECOMPRESSION SYSTEM
1. Check:
   - Decompression system

*************************************************************
Checking steps:
Check while the camshaft sprocket is installed on the camshaft.
- Check that the decompressor lever pin ① projects from the camshaft.
- Check that the decompressor cam ② moves smoothly.
*************************************************************
CHECKING THE TIMING CHAIN GUIDE
1. Check:
   - Exhaust side timing chain guide
     Wear/damage → Replace.

CHECKING THE TIMING CHAIN TENSIONER
1. Check:
   - Timing chain tensioner
     Cracks/damage/rough movement → Replace.

*************************************************
   a. Lightly press the timing chain tensioner rod into the timing chain tensioner housing by hand.

   NOTE:  
   While pressing the timing chain tensioner rod, wind it clockwise with a thin screwdriver ① until it stops.

   b. Removing the screwdriver and slowly release the timing chain tensioner rod.

   c. Make sure that the timing chain tensioner rod comes out of the timing chain tensioner housing smoothly. If there is rough movement, replace the timing chain tensioner.

*************************************************

CHECKING THE CYLINDER HEAD
1. Eliminate:
   - Carbon deposits (from the combustion chambers)
     Use a rounded scraper.

   NOTE:  
   Do not use a sharp instrument to avoid damaging or scratching:
   - Spark plug threads
   - Valve seats

2. Check:
   - Cylinder head
     Scratches/damage → Replace the cylinder head cover and cylinder head as a set.
   - Cylinder head water jacket
     Mineral deposits/rust → Eliminate.
3. Measure:
- Cylinder head warpage
  Out of specification → Resurface.

**Cylinder head warpage:**
Less than 0.05 mm (0.002 in)

Measurement and resurfacing steps:
- Place a straightedge and a feeler gauge across the cylinder head.
- Use a feeler gauge to measure the warpage.
- If the warpage is out of specification, resurface the cylinder head.
- Place a 400 ~ 600 grit wet sandpaper on the surface plate, and resurface the head using a figure-eight sanding pattern.

**NOTE:**
To ensure an even surface rotate the cylinder head several times.

---

**INSTALLING THE CAMSHAFT AND CYLINDER HEAD**

1. Install:
- Cylinder head
- Bolts (M9: 1 ~ 6)
  - 38 Nm (3.8 m·kg, 27 ft·lb)
- Bolt (M6: 7)
  - 10 Nm (1.0 m·kg, 7.2 ft·lb)

**NOTE:**
- Tighten the bolts in the proper sequence.
- Follow the numerical order shown in the illustration. Tighten the bolts in two stages.
2. Install:
- Camshaft
- Camshaft sprocket

Installation steps:
- Turn the crankshaft counterclockwise with a wrench.
- Align the “I” mark ① on the rotor with the stationary pointer ② on the crankcase cover. When the “I” mark is aligned with the stationary pointer, the piston is at the Top Dead Center (T.D.C.).

**CAUTION:**
Do not turn the crankshaft during the camshaft installation.

- Temporarily install the camshaft sprocket on the camshaft. (Do not install the bolts.) Then, install the timing chain on the camshaft sprocket.

**NOTE:**
Make sure the small holes ③ on the camshaft face upward.

- Align the notches ④ on the decompressor cams with the projections ⑤ on the decompressor spring lever, then install the camshaft sprocket on the camshaft.

**NOTE:**
Check that each part is positioned as shown in the illustration.

- Small holes on camshaft sprocket
- Punch mark on decompressor spring lever
- Top front of cylinder head
- Install the decompressor cam guide plates (9) and camshaft sprocket bolts (10).

| Camshaft sprocket bolt:  
20 Nm (2.0 m • kg, 14 ft • lb) |

**NOTE:**
Insert a screwdriver into the timing chain tensioner hole and push the timing chain guide inward.

- Remove the retaining wire.

**NOTE:**
Insert a screwdriver into the timing chain tensioner hole and push the timing chain guide inward.

3. Install:
- Timing chain guide

4. Install:
- Timing chain tensioner

**Installation steps:**

a. Lightly press the timing chain tensioner rod into the timing chain tensioner housing by hand.

b. While pressing the timing chain tensioner rod, wind it clockwise with a thin screwdriver (1) until it stops.

c. With the screwdriver still inserted into the timing chain tensioner, install the timing chain tensioner and gasket onto the cylinder block. Then, tighten the timing chain tensioner bolts to the specified torque.

**WARNING**
Always use a new gasket.

**NOTE:**
The “UP” mark on the timing chain tensioner should face up.

| Timing chain tensioner bolt  
10 Nm (1.0 m • kg, 7.2 ft • lb) |

d. Remove the screwdriver, make sure that the timing chain tensioner rod releases, and tighten the cap bolt to the specified torque.

| Timing chain tensioner cap bolt  
7 Nm (0.7 m • kg, 5.7 ft • lb) |

5. Check:
- Small holes on camshaft sprocket
- Rotor “I” mark
  Out of alignment → Adjust.
### Removing the valve and valve spring

**Cylinder head**

</tbody>
</table>
REMOVING THE VALVE AND VALVE SPRING

1. Check:
   - Valve sealing
     Leakage at the valve seat → Inspect the valve face, valve seat and valve seat width.
     Refer to “CHECKING THE VALVE AND VALVE SPRING”.

Checking steps:
   - Pour a clean solvent ① into the intake and exhaust ports.
   - Check that the valve seals properly.
     There should be no leakage at the valve seat ②.

2. Remove:
   - Valve cotters

NOTE: Attach a valve spring compressor ① and valve spring compressor attachment ② between the valve spring retainer and the cylinder head to remove the valve cotters.

Valve spring compressor:
P/N. YM-04019, 90890-04019

Valve spring compressor attachment:
P/N. 90890-01243
CHECKING THE VALVE AND VALVE SPRING

1. Measure:
   - Stem-to-guide clearance

   **Stem-to-guide clearance = valve guide inside diameter \( \mathbf{a} \) – valve stem diameter \( \mathbf{b} \)**

   Out of specification → Replace the valve guide.

   **Clearance (stem to guide):**
   - Intake: 0.010 ~ 0.037 mm (0.0004 ~ 0.0015 in)
     <Limit>: 0.08 mm (0.0031 in)
   - Exhaust: 0.025 ~ 0.052 mm (0.0010 ~ 0.0020 in)
     <Limit>: 0.10 mm (0.0039 in)

2. Replace:
   - Valve guide

   -------------------------------------

   **Replacement steps:**

   **NOTE:**
   To ease guide removal, installation and to maintain correct fit, heat the cylinder head to 100 °C (212 °F) in an oven.

   - Remove the valve guide using a valve guide remover \( \mathbf{1} \).
   - Install the new valve guide using a valve guide remover \( \mathbf{1} \) and valve guide installer \( \mathbf{2} \).
   - After installing the valve guide, bore the valve guide using a valve guide reamer \( \mathbf{3} \) to obtain proper stem-to-guide clearance.

   **Valve guide remover (ø 6):**
   P/N. YM-4064-A, 90890-04064
   **Valve guide installer (ø 6):**
   P/N. YM-04065-A, 90890-04065
   **Valve guide reamer (ø 6):**
   P/N. YM-04066, 90890-04066

   **NOTE:**
   After replacing the valve guide reface the valve seat.

   -------------------------------------
3. Check:
- Valve face
  Pitting/wear → Grind the face.
- Valve stem end
  Mushroom shape or diameter larger than the body of the stem → Replace.

4. Measure:
- Margin thickness @
  Out of specification → Replace.

   Margin thickness:
   Intake:
   0.85 ~ 1.15 mm
   (0.0335 ~ 0.0452 in)
   Exhaust:
   0.85 ~ 1.15 mm
   (0.0335 ~ 0.0452 in)

5. Measure:
- Runout (valve stem)
  Out of specification → Replace.

   Runout limit:
   0.01 mm (0.0004 in)

   NOTE:
   - When installing a new valve always replace the guide.
   - If the valve is removed or replaced always replace the oil seal.

6. Eliminate:
- Carbon deposits
  (from the valve face and valve seat)

7. Check:
- Valve seats
  Pitting/wear → Reface the valve seat.
8. Measure:
- Valve seat width [a]
  Out of specification → Reface the valve seat.

Valve seat width:
- Intake:
  - 0.9 ~ 1.1 mm
  - (0.0354 ~ 0.0433 in)
  - <Limit>: 1.6 mm (0.0630 in)
- Exhaust:
  - 0.9 ~ 1.1 mm
  - (0.0354 ~ 0.0433 in)
  - <Limit>: 1.6 mm (0.0630 in)

Measurement steps:
- Apply Mechanic’s blueing dye (Dykem) [b] to the valve face.
- Install the valve into the cylinder head.
- Press the valve through the valve guide and onto the valve seat to make a clear pattern.
- Measure the valve seat width. Where the valve seat and valve face made contact, blueing will have been removed.
- If the valve seat is too wide, too narrow, or the seat is not centered, the valve seat must be refaced.

9. Lap:
- Valve face
- Valve seat

NOTE: After refacing the valve seat or replacing the valve and valve guide, the valve seat and valve face should be lapped.

Lapping steps:
- Apply a coarse lapping compound to the valve face.
  
  CAUTION: Do not let the compound enter the gap between the valve stem and the guide.
- Apply molybdenum disulfide oil to the valve stem.
VALVES AND VALVE SPRINGS

- Install the valve into the cylinder head.
- Turn the valve until the valve face and valve seat are evenly polished, then clean off all of the compound.

**NOTE:**
For best lapping results, lightly tap the valve seat while rotating the valve back and forth between your hands.

- Apply a fine lapping compound to the valve face and repeat the above steps.

**NOTE:**
After every lapping operation be sure to clean off all of the compound from the valve face and valve seat.

- Apply Mechanic’s blueing dye (Dykem) to the valve face.
- Install the valve into the cylinder head.
- Press the valve through the valve guide and onto the valve seat to make a clear pattern.
- Measure the valve seat width again. If the valve seat width is out of specification, reface and relap the valve seat.

******************************************************************************

10. Measure:
- Valve spring free length
  - Out of specification → Replace.

<table>
<thead>
<tr>
<th>Free length (valve spring):</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intake:</td>
</tr>
<tr>
<td>32.63 mm (1.28 in)</td>
</tr>
<tr>
<td>&lt;Limit&gt;: 31.0 mm (1.22 in)</td>
</tr>
<tr>
<td>Exhaust:</td>
</tr>
<tr>
<td>36.46 mm (1.44 in)</td>
</tr>
<tr>
<td>&lt;Limit&gt;: 34.6 mm (1.36 in)</td>
</tr>
</tbody>
</table>
VALVES AND VALVE SPRINGS

11. Measure:
   - Compressed spring force ③
     Out of specification → Replace.
   b) Installed length

   Compressed spring force:
   Intake:
   100.0 ~ 115.7 N at 27.5 mm
   (10.20 ~ 11.80 kg,
   22.48 ~ 26.01 lb at 1.08 in)
   Exhaust:
   120.6 ~ 138.3 N at 31.0 mm
   (12.30 ~ 14.10 kg,
   27.11 ~ 31.09 lb at 1.22 in)

12. Measure:
   - Spring tilt ③
     Out of specification → Replace.

   Spring tilt limit:
   Intake:
   2.5°/1.4 mm (0.06 in)
   Exhaust:
   2.5°/1.6 mm (0.06 in)

INSTALLING THE VALVE AND VALVE SPRING

1. Apply:
   - Molybdenum disulfide oil
     (onto the valve stem and valve stem seal)

2. Install:
   - Valve spring seats
   - Valve stem seals New
   - Valves
   - Valve springs
   - Valve spring retainers

NOTE:
Install the valve springs with the larger pitch ③ facing upwards.

b) Smaller pitch
3. Install:
- Valve cotters

**NOTE:**
Install the valve cotters while compressing the valve spring with the valve spring compressor ① and valve spring compressor attachment ②.

**Valve spring compressor:**
P/N. YM-04019, 90890-04019
**Valve spring compressor attachment:**
P/N. 90890-01243

4. To secure the valve cotters onto the valve stem, lightly tap the valve tip with a piece of wood.

**CAUTION**
Hitting the valve tip with excessive force could damage the valve.
Removing the cylinder and piston
Remove the parts in the order below. Refer to “WATER PUMP” in CHAPTER 5. Refer to “CAMSHAFT AND CYLINDER HEAD”.

<table>

</tbody>
</table>

1. 42 Nm (4.2 m·kg, 30 ft·lb)
2. 10 Nm (1.0 m·kg, 7.2 ft·lb)
REMOVING THE PISTON

1. Remove:
   - Piston pin clips ①
   - Piston pin ②
   - Piston ③

**NOTE:**
- Put identification marks on each piston head for reference during reinstallation.
- Before removing each piston pin, deburr the clip groove and pin hole area. If the piston pin groove is deburred and the piston pin is still difficult to remove, use the piston pin puller ④.

**CAUTION:**
- Do not use a hammer to drive the piston pin out.

2. Remove:
   - Piston rings

**NOTE:**
- Spread the end gaps apart while at the same time lifting the piston ring over the top of the piston crown, as shown in the illustration.

CHECKING THE CYLINDER AND PISTON

1. Check:
   - Cylinder and piston walls
     - Vertical scratches → Rebore or replace the cylinder and the piston.

2. Measure:
   - Piston-to-cylinder clearance

**Measurement steps:**

1st step:
- Measure the cylinder bore “C” with a cylinder bore gauge ①.
- ① 50 mm (2.0 in) from the top of the cylinder
NOTE:
Measure cylinder bore “C” in parallel to and at right angles to the cylinder matching surface. Then, find the average of the measurements.

<table>
<thead>
<tr>
<th>Cylinder bore “C”</th>
<th>Standard</th>
<th>Wear limit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>100.005 ~ 100.055 mm (3.9372 ~ 3.9392 in)</td>
<td>100.100 mm (3.9404 in)</td>
</tr>
</tbody>
</table>

\[ C = \frac{X+Y}{2} \]

- If out of specification, rebore or replace the cylinder, and replace the piston and piston rings as a set.

2nd step:
- Measure piston skirt diameter “P” with a micrometer.
- 5.0 mm (0.20 in) from the piston bottom edge

<table>
<thead>
<tr>
<th>Piston skirt diameter “P”</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>99.945 ~ 99.995 mm (3.9348 ~ 3.9368 in)</td>
</tr>
</tbody>
</table>

- If out of specification, replace the piston and piston rings as a set.

3rd step:
- Find the piston-to-cylinder clearance with the following formula.

\[ \text{Piston-to-cylinder clearance} = \frac{C}{P} \]

- If out of specification, rebore or replace the cylinder, and replace the piston and piston rings as a set.

******************************************

Standard Wear limit

<table>
<thead>
<tr>
<th>Cylinder bore “C”</th>
<th>100.100 mm (3.9404 in)</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>

<th>0.05 ~ 0.07 mm (0.0020 ~ 0.0028 in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;Limit&gt;</td>
<td>0.15 mm (0.0059 in)</td>
</tr>
</tbody>
</table>

******************************************
CHECKING THE PISTON RING

1. Measure:
   - Ring side clearance
     Use a feeler gauge.
     Out of specification → Replace the piston and rings as a set.

   **NOTE:**
   Clean carbon from the piston ring grooves and rings before measuring the side clearance.

<table>
<thead>
<tr>
<th>Side clearance</th>
<th>Standard</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top ring</td>
<td>0.04 ~ 0.08 mm (0.0016 ~ 0.0031 in)</td>
<td>0.13 mm (0.0051 in)</td>
</tr>
<tr>
<td>2nd ring</td>
<td>0.03 ~ 0.07 mm (0.0012 ~ 0.0028 in)</td>
<td>0.13 mm (0.0051 in)</td>
</tr>
</tbody>
</table>

2. Position:
   - Piston ring
     (in cylinder)

   **NOTE:**
   Insert a ring into the cylinder and push it approximately 50 mm (2.0 in) into the cylinder.
   Push the ring with the piston crown so that the ring will be at a right angle to the cylinder bore.

   @ 50 mm (2.0 in)

3. Measure:
   - Ring end gap
     Out of specification → Replace.

   **NOTE:**
   You cannot measure the end gap on the expander spacer of the oil control ring. If the oil control ring rails show excessive gap, replace all three rings.

<table>
<thead>
<tr>
<th>End gap</th>
<th>Standard</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Top ring</td>
<td>0.30 ~ 0.45 mm (0.0118 ~ 0.0177 in)</td>
<td>0.70 mm (0.0276 in)</td>
</tr>
<tr>
<td>2nd ring</td>
<td>0.30 ~ 0.45 mm (0.0118 ~ 0.0177 in)</td>
<td>0.80 mm (0.0315 in)</td>
</tr>
<tr>
<td>Oil ring</td>
<td>0.2 ~ 0.7 mm (0.0079 ~ 0.0276 in)</td>
<td>—</td>
</tr>
</tbody>
</table>
CHECKING THE PISTON PIN

1. Check:
   - Piston pin
     Blue discoloration/grooves → Replace, then inspect the lubrication system.

2. Measure:
   - Piston pin-to-piston clearance

   ***************************************************************
   Measurement steps:
   - Measure the piston pin outside diameter \( \text{①} \).
     If out of specification, replace the piston pin.
   - Measure the piston inside diameter \( \text{②} \).
   - Calculate the piston pin-to-piston clearance with the following formula.
     \[
     \text{Piston pin-to-piston clearance} = \text{Bore size (piston pin) } \text{②} - \text{Outside diameter (piston pin) } \text{①}
     \]
     If out of specification, replace the piston.

   ***************************************************************

INSTALLING THE PISTON

1. Install:
   - Piston rings
     (onto the piston)

   **NOTE:**
   - Be sure to install the piston rings so that the manufacturer’s marks or numbers are located on the upper side of the rings.
   - Lubricate the piston and piston rings liberally with engine oil.
2. Position:
- Top ring
- 2nd ring
- Oil ring
Offset the piston ring end gaps as shown.

① Top ring end
② Oil ring end (lower)
③ Oil ring end (upper)
④ 2nd ring end

3. Install:
- Piston ①
- Piston pin ②
- Piston pin clips ③ New

**NOTE:**
- Apply engine oil onto the piston pin, piston ring and piston.
- Be sure that the arrow mark ① on the piston points to the exhaust side of the engine.
- Before installing the piston pin clip, cover the crankcase with a clean rag to prevent the piston pin clip from falling into the crankcase.

4. Lubricate:
- Piston
- Piston rings
- Cylinder

**NOTE:**
Apply a liberal coating of engine oil.

**INSTALLING THE CYLINDER**
1. Install:
- Cylinder
- O-ring New
- Bolts (M10) \(42 \text{ Nm (4.2 m \cdot \text{kg, 30 ft \cdot lb})}\)
- Bolts (M6) \(10 \text{ Nm (1.0 m \cdot \text{kg, 7.2 ft \cdot lb})}\)

**NOTE:**
Install the cylinder with one hand while compressing the piston rings with the other hand.

**CAUTION:**
- Be careful not to damage the timing chain damper during installation.
- Pass the timing chain through the timing chain cavity.

RECOIL STARTER AND AC MAGNETO

REMOVING THE AC MAGNETO
1. Remove:
   - Starter pulley

   **NOTE:**
   Use the rotor holding tool to hold the starter pulley.

   **Rotor holding tool:**
   P/N. YU-01235, 90890-01235

2. Remove:
   - Crankcase cover (left)
   - Gasket
   - Dowel pins

   **NOTE:**
   Working in a crisscross pattern, loosen each bolt 1/4 of a turn. Remove them after all of them are loosened.

3. Remove:
   - CDI rotor

   **NOTE:**
   Use the flywheel puller.

   **Flywheel puller:**
   P/N. YM-01404, 90890-01404

DISASSEMBLING THE RECOIL STARTER
1. Remove:
   - Cap
   - Starter handle

   **NOTE:**
   Before untieing the knot above the starter handle, make a knot in the rope so that the rope is not pulled into the case.

CHECKING THE AC MAGNETO
1. Check:
   - Starter coil
   - Pickup coil
     Damage → Replace.
CHECKING THE STARTER CLUTCH

1. Check:
   • Starter one-way clutch ①
     Cracks/damage → Replace.
   • Bolts ② (starter clutch)
     Loose → Replace with a new one, and clinch the end of the bolt.

**NOTE:**
The arrow mark on the starter clutch must face inward, away from the CDI rotor.

---

**Inspection steps:**

- Install the starter wheel gear to the starter clutch, and hold the starter clutch.
- When turning the starter wheel gear counterclockwise A, the starter clutch and the wheel gear should be engaged. If not, the starter clutch is faulty. Replace it.
- When turning the starter wheel gear clockwise B, the starter wheel gear should turn freely. If not, the starter clutch is faulty. Replace it.

---

2. Check:
   - Gear teeth (starter idle) ①
   - Gear teeth (starter wheel) ②
     Burrs/clips/roughness/wear → Replace.

3. Check:
   - Starter wheel gear (contacting surface)
     Damage/pitting/wear → Replace.
CHECKING THE STARTER PULLEY
1. Check:
   - Starter pulley
     Cracks/pitting → Deburr or replace.

CHECKING THE RECOIL STARTER
1. Check:
   - Rope ①
   - Sheave drum ②
   - Drive pawl ③
     Wear/damage → Replace.
   - Coil spring ④
   - Pawl spring ⑤
   - Spring ⑥
     Fatigue → Replace.

ASSEMBLING THE RECOIL STARTER
1. Install:
   - Sheave drum ①
   - Rope ②
   - Pawl spring ③
   - Drive pawl ④

**NOTE:**
Wind the rope 4-1/2 turns clockwise around the sheave drum. Then insert the rope into the drum slit ⑧.
2. Install:
- Starter spring ①
- Sheave drum assembly ②

**NOTE:**
- Mesh the spring hook ③ with the case slit, then wind the spring clockwise into the case from the larger to smaller diameter.
- Mesh the sheave drum hook ④ with the spring hook ⑤.

3. Install:
- Spring ①
- Friction plate ②
- Nut

**NOTE:**
Insert the spring hooks into the pawl side holes.

4. Turn the sheave drum 3-turn clockwise to give preload to the spring.

5. Install:
- Starter handle ①
- Cap ②

**NOTE:**
- Pass the rope through the case hole and make a knot ③ on the rope so that the rope is not pulled into the case.
- Untie the knot ③ after making a knot ④ above the handle.

**INSTALLING THE AC MAGNETO**

1. Apply:
- Sealant (Quick Gasket®) ① (into the slit)

**Sealant (Quick Gasket®):**
P/N. ACC-11001-05-01
Yamaha bond No. 1215:
P/N. 90890-85505
2. Install:
- Woodruff key
- CDI rotor

**NOTE:**
- Before installing the rotor, clean the outside of the crankshaft and the inside of the rotor.
- After installing the rotor, check that the rotor rotates smoothly. If not, reinstall the key and rotor.

3. Install:
- Dowel pins
- Gasket New
- Crankcase cover (left)

**NOTE:**
- When installing the crankcase cover (left), use a long rod to hold the CDI rotor in position from the outside. This will make assembly easier. Be careful not to damage the oil seal.
- Tighten the bolts in stages, using a criss-cross pattern.

4. Install:
- Starter pulley 1

**NOTE:**
Use a rotor holding tool 2 to hold the starter pulley.

**Rotor holding tool:**
P/N. YU-01235, 90890-01235

**NOTE:**
Before installing the starter pulley, do not forget to install the O-ring.
5. Install:
- Select lever unit
- Select lever shift rod

**NOTE:**
Before installing the select lever shift rod, make sure that the select lever and shift cam is in the NEUTRAL position.

6. Adjust:
- Select lever shift rod
  Refer to “ADJUSTING THE SELECT LEVER CONTROL CABLE AND SHIFT ROD” in CHAPTER 3.
**Removing the balancer gears and oil pump gears**

</tbody>
</table>
REMOWING THE BALANCER DRIVE GEAR AND BALANCER DRIVEN GEAR
1. Straighten the lock washer tabs.
2. Loosen:
   • Balancer driven gear nut ①

NOTE: ____________________________________________________________________________________
Place an aluminum plate ② between the teeth of the balancer drive gear ③ and balancer driven gear ④.

REMOWING THE BALANCER DRIVE GEAR AND BUFFER BOSS
1. Remove:
   • Plate ①
   • Balancer drive gear ②
   • Springs ③
   • Pins ④
   • Buffer boss ⑤

NOTE: ____________________________________________________________________________________
   • Using a three-leg puller ⑥ when removing the balancer drive gear ② and buffer boss ⑤.

CHECKING THE OIL PUMP DRIVE
1. Check:
   • Oil pump drive gear ①
   • Oil pump driven gear ②
   Cracks/wear/damage → Replace.
BALANCER GEARS AND OIL PUMP GEARS

CHECKING THE BALANCER DRIVE
1. Check:
   - Balancer drive gear ①
   - Balancer driven gear ②
     Damage/wear → Replace the balancer drive gear and balancer driven gear as a set.
     Excessive noise during operation → Replace the balancer drive gear and balancer driven gear as a set.

INSTALLING THE BALANCER DRIVE GEAR AND BALANCER DRIVEN GEAR
1. Install:
   - Pin
   - Spring
   - Balancer drive gear
     (onto the buffer boss)

   **NOTE:**
   Align the punch mark ③ on the balancer drive gear with the hole ④ to the buffer boss.

2. Install:
   - Balancer drive gear
   - Balancer driven gear

   **NOTE:**
   Align the punch mark ③ on the balancer drive gear with the punch mark ⑥ on the balancer driven gear.
3. Install:
   - Lock washer [New]
   - Balancer driven gear nut ①
     - 140 Nm (14.0 m•kg, 100 ft•lb)

**NOTE:**
- Place an aluminum plate ② between the teeth of the balancer drive gear ③ and balancer driven gear ④.
- Apply the molybdenum disulfide grease to the thread of axles and nuts.

4. Bend the lock washer tabs along the balancer driven gear nut.

### PRIMARY AND SECONDARY SHEAVES

#### Order | Job name/Part name | Q'ty | Remarks
--- | --- | --- | ---
7 | Primary fixed sheave | 1 | Refer to “REMOVING/INSTALLING THE PRIMARY AND SECONDARY SHEAVES”.
8 | Secondary sheave assembly | 1 |  
9 | Drive belt case | 1 |  
10 | Rubber gasket | 2 | For installation, reverse the removal procedure.

**T R.**

- **10 Nm (1.0 m·kg, 7.2 ft·lb)**
- **100 Nm (10.0 m·kg, 72 ft·lb)**
- **120 Nm (12.0 m·kg, 85 ft·lb)**
### PRIMARY SHEAVE

**Order** | **Job name/Part name** | **Q'ty** | **Remarks**
--- | --- | --- | ---
1 | Disassembling the primary sheave | 1 | Remove the parts in the order below.
2 | Primary pulley sheave cap | 4 | Refer to “ASSEMBLING THE PRIMARY SHEAVE”.
3 | Primary pulley slider | 4 |
4 | Spacer | 1 |
5 | Primary pulley cam | 8 |
6 | Primary pulley weight | 1 |
7 | Collar | 2 |
8 | Oil seal | 1 |
9 | Primary sliding sheave | 1 |
10 | O-ring | 1 |

**3 Nm (0.3 m·kg, 2.2 ft·lb)**

Disassembling the primary sheave:

1. Primary pulley sheave cap
2. Primary pulley slider
3. Spacer
4. Primary pulley cam
5. Primary pulley weight
6. Collar
7. Oil seal
8. Primary sliding sheave
9. O-ring

For assembly, reverse the disassembly procedure.
**SECONDARY SHEAVE**

- **Disassembly the secondary sheave**
  
  1. Nut  
  2. Spring seat  
  3. Compression spring  
  4. Spring seat  
  5. Guide pin  
  6. Secondary sliding sheave  
  7. O-ring  
  8. Secondary fixed sheave  
  9. Oil seal  
  10. Oil seal

**Q'ty**

- 1
- 1
- 1
- 1
- 1
- 4
- 1
- 2
- 1
- 1

**Remarks**

- Remove the parts in the order below.
- Refer to "DISASSEMBLING/ASSEMBLING SECONDARY SHEAVE".
- For assembly, reverse the disassembly procedure.

**Special Cautions**

- 90 Nm (9.0 m·kg, 65 ft·lb)
REMOVING THE PRIMARY AND SECONDARY SHEAVES

1. Loosen:
   - Nut (secondary sheave) ①
   - Nut (primary sheave) ②

NOTE:
- Use the sheave holder ③ to hold the primary sheave.
- First, loosen the nut (secondary sheave) ②, then loosen the nut (primary sheave) ①.

Sheave holder:
P/N. YU-01880, 90890-01701

DISASSEMBLING THE SECONDARY SHEAVE

1. Remove:
   - Nut ①

Removing steps:
- Attach the sheave fixed block ②, locknut wrench ③ and sheave spring compressor ④ to the secondary sheave assembly.

Sheave fixed block:
P/N. YM-04135, 90890-04135
Locknut wrench:
P/N. 90890-01348
Sheave spring compressor:
P/N. YM-04134, 90890-04134

- Place the sheave fixed block in a vise and secure it.
- Tighten the sheave spring compressor nut ⑤ and compress the spring.
- Loosen the nut ① with the locknut wrench ③.
- Remove the nut ①.
- Remove the sheave spring compressor and locknut wrench.
CHECKING THE PRIMARY SHEAVE
1. Check:
   - Weight outside diameter \( \text{a} \)
     - Out of specification → Replace the weight.

   \[
   \text{Weight outside diameter:} \\
   30 \text{ mm (1.18 in)} \\
   <\text{Limit}>: \ 29.5 \text{ mm (1.16 in)}
   \]

2. Check:
   - Primary puller slider
   - Primary sliding sheave splines
     - Wear/cracks/damage → Replace.
   - Spacer
   - Primary puller cam
     - Cracks/damage → Replace.

3. Check:
   - Primary sliding sheave
   - Primary fixed sheave
     - Cracks/damage → Replace.

CHECKING THE SECONDARY SHEAVE
1. Check:
   - Secondary fixed sheave smooth operation
   - Secondary sliding sheave smooth operation
     - Scratches/damage → Replace as a set.

2. Check:
   - Torque cam groove \( \text{1} \)
     - Wear/damage → Replace.

3. Check:
   - Guide pin \( \text{2} \)
     - Wear/damage → Replace.

4. Check:
   - Secondary sheave spring
     - Damage → Replace.

5. Measure:
   - Secondary sheave spring free length \( \text{a} \)
     - Out of specification → Replace the secondary sheave spring.

   \[
   \text{Free length:} \\
   124.2 \text{ mm (4.89 in)} \\
   <\text{Limit}>: \ 121.2 \text{ mm (4.77 in)}
   \]
ASSEMBLING THE PRIMARY SHEAVE

1. Clean:
   - Primary sliding sheave face (1)
   - Primary fixed sheave face (2)
   - Collar (3)
   - Weight (4)
   - Primary sliding sheave cam face

   **NOTE:**
   Remove any excess grease.

2. Install:
   - Weight (1)

   **NOTE:**
   - Apply Yamaha Grizzly grease (90 g) to the whole outer surface of the weight and install.
   - Apply Yamaha Grizzly grease to the inner surface of the collar.
   - Apply Yamaha Grizzly grease to the inner surface of the primary sliding sheave.

3. Install:
   - Spacer
   - Slider (1)
   - Cam (2)
   - Primary sliding sheave cap

   **T R.**
   3 Nm (0.3 m • kg, 2.2 ft • lb)

ASSEMBLING THE SECONDARY SHEAVE

1. Apply:
   - BEL-RAY assembly lube®
     (to the secondary sliding sheave (1) inner surface and oil seals)
   - BEL-RAY assembly lube®
     (to the bearings, oil seals and inner surface of the secondary fixed sheave (2))

2. Install:
   - Guide pin (1)
3. Apply:
- BEL-RAY assembly lube®
  (to the guide pin sliding groove ①, and O-ring ② New)

4. Install:
- Spring seat
- Compression spring
- Spring seat
- Nut

Installing steps:
- Attach the sheave fixed block, locknut wrench and sheave spring compressor to the secondary sheave assembly.

<table>
<thead>
<tr>
<th>Sheave fixed block:</th>
<th>P/N. YM-04135, 90890-04135</th>
</tr>
</thead>
<tbody>
<tr>
<td>Locknut wrench:</td>
<td>P/N. 90890-01348</td>
</tr>
<tr>
<td>Sheave spring compressor:</td>
<td>P/N. YM-04134, 90890-04134</td>
</tr>
</tbody>
</table>

- Place the sheave fixed block in a vise and secure it.
- Tighten the sheave spring compressor nut ① and compress the spring.
- Install the nut ② and tighten it to the specified torque using the locknut wrench.

<table>
<thead>
<tr>
<th>Nut:</th>
<th>90 Nm (9.0 m • kg, 65 ft • lb)</th>
</tr>
</thead>
</table>

- Remove the sheave spring compressor, locknut wrench, and sheave fixed block.
INSTALLING THE PRIMARY AND SECONDARY SHEAVES

1. Install:
   - Secondary sheave assembly
   - V-belt
   - Primary sheave assembly

**NOTE:**
- Tightening the bolts ① will push the secondary sliding sheave away, causing the gap between the secondary fixed and sliding sheaves to widen.
- Install the V-belt so that its arrow faces the direction show in the illustration.

2. Tighten:
   - Nut (primary sheave) ①
     - Max. 100 Nm (10.0 m·kg, 72 ft·lb)
   - Nut (secondary sheave) ②
     - Max. 120 Nm (12.0 m·kg, 85 ft·lb)

**NOTE:**
- Use the sheave holder ③ to hold the primary sheave.
- First, tighten the nut (primary sheave) ①, then tighten the nut (secondary sheave) ②.

Sheave holder:
P/N. YU-01880, 90890-01701

Remove the parts in the order below.
Refer to “PRIMARY AND SECONDARY SHEAVES”.

10 Nm (1.0 m · kg, 7.2 ft · lb)
160 Nm (16.0 m · kg, 115 ft · lb)
Disassembling the clutch housing

1. Oil seal
2. Circlip
3. Bearing housing
4. Circlip
5. Bearing
6. Circlip
7. Bearing
8. Clutch housing

Remove the parts in the order below.

For assembly, reverse the disassembly procedure.
REMOVING THE CLUTCH

1. Remove:
   - Clutch housing assembly
   - Gasket
   - Dowel pins

**NOTE:**
Working in crisscross pattern, loosen each bolt 1/4 of a turn. Remove them after all of them are loosened.

2. Straighten:
   - Punched portion of the nut ①

3. Remove:
   - Nut ①

**NOTE:**
Use a clutch holding tool ② to hold the clutch carrier assembly.

CHECKING THE CLUTCH

1. Check:
   - Clutch housing ①
     - Heat damage/wear/damage → Replace.
   - One-way clutch bearing ②
     - Chafing/wear/damage → Replace.

**NOTE:**
- Replace the one-way clutch assembly and clutch housing as a set.
- The one-way clutch bearing must be installed with the flange side facing in.

Checking steps:
- Install the one-way clutch bearing and clutch carrier assembly to the clutch housing and hold the clutch carrier assembly.
- When turning the clutch housing clockwise [A], the clutch housing should turn freely.
  If not, the one-way clutch assembly is faulty.
  Replace it.
- When turning the clutch housing counterclockwise [B], the clutch housing and crankshaft should be engaged.
  If not, the one-way clutch assembly is faulty.
  Replace it.

Clutch holding tool:
P/N. YM-91042, 90890-04086
2. Check:
- Clutch shoe
  Heat damage $\rightarrow$ Replace.
3. Measure:
- Clutch shoe thickness
  Out of specification $\rightarrow$ Replace.

Clutch shoe thickness:
1.5 mm (0.06 in)
Clutch shoe wear limit $\circledast$:
1.0 mm (0.04 in)

**INSTALLING THE CLUTCH**

1. Install:
- Collar
- Clutch carrier assembly
- Nut

**NOTE:**
Use a clutch holding tool $\circledast$ to hold the clutch carrier assembly.

Clutch holding tool:
P/N. YM-91042, 90890-04086

2. Lock the threads with a drift punch.

3. Install:
- One-way clutch bearing

**NOTE:**
The one-way clutch bearing should be installed in the clutch carrier assembly with the arrow mark $\circledast$ facing toward the clutch housing.
4. Install:
- Dowel pins
- Gasket [New]
- Clutch housing assembly

**NOTE:**
- Tighten the bolts in stages, using a criss-cross pattern.
- After tightening the bolts, check that the clutch housing assembly to counterclockwise rotates smoothly.

**Torque:** 10 Nm (1.0 m·kg, 7.2 ft·lb)
SEPARATING THE CRANKCASE
1. Separate:
   - Left crankcase
   - Right crankcase

****************************************************
Separation steps:
- Remove the crankcase bolts.

NOTE:
- Loosen each bolt 1/4 of a turn at a time and after all the bolts are loosened, remove them.
- Loosen the bolts in stages, using a criss-cross pattern.

A) Left crankcase
B) Right crankcase
- Remove the left crankcase.

CAUTION:
Use a soft hammer to tap on one side of the crankcase. Tap only on reinforced portions of the crankcase. Do not tap on the crankcase mating surfaces. Work slowly and carefully. Make sure that the crankcase halves separate evenly.
- Remove the dowel pins.

****************************************************

CHECKING THE TIMING CHAIN AND GUIDE
1. Check:
   - Timing chain
     Cracks/stiff → Replace the timing chain and camshaft sprocket as a set.

2. Check:
   - Intake side timing chain guide
     Wear/damage → Replace.

CHECKING THE OIL DELIVERY PIPE
1. Check:
   - Oil delivery pipe
     Cracks/damage → Replace.
     Clogged → Blow out with compressed air.
CHECKING THE CRANKCASE
1. Thoroughly wash the case halves in a mild solvent.
2. Clean all the gasket mating surfaces and crankcase mating surfaces thoroughly.
3. Check:
   - Crankcase
     Cracks/damage → Replace.
   - Oil delivery passages
     Clogged → Blow out with compressed air.

CHECKING THE BEARINGS
1. Check:
   - Bearing
     Clean and lubricate, then rotate the inner race with a finger.
     Roughness → Replace.

ASSEMBLING THE CRANKCASE
1. Apply:
   - Sealant (Quick Gasket®) ①
     (to the mating surfaces of both case halves)
   - Dowel pin ②

2. Install:
   - Dowel pin ②

3. Fit the left crankcase onto the right case. Tap lightly on the case with a soft hammer.

**CAUTION**
Before installing and torquing the crankcase holding bolts, be sure to check whether the transmission is functioning properly by manually rotating the shift cam in both directions.
4. Tighten:
   - Crankcase bolts
     (follow the proper tightening sequence)
     \[10 \text{ Nm (1.0 m • kg, 7.2 ft • lb)}\]
   A Right crankcase
   B Left crankcase

**NOTE:**
Tighten the bolts in stages, using a crisscross pattern.

5. Apply:
   - 4-stroke engine oil
     (to the crank pin, bearing and oil delivery hole)

6. Check:
   - Crankshaft and transmission operation
     Unsmooth operation → Repair.

**INSTALLATING THE SHIFT LEVER**

1. Install:
   - Shift lever 2 assembly \(\textcircled{1}\)
     \[14 \text{ Nm (1.4 m • kg, 10 ft • lb)}\]
   - Shift lever 1 \(\textcircled{2}\)

**NOTE:**
When installing the shift lever 1, align the punch mark \(\textcircled{3}\) on the shift lever 1 with the punch marks \(\textcircled{4}\) on the shift lever 2.
Removing the crankshaft and oil pump
Crackcase separation
1 Oil strainer/O-ring 1/1
2 Oil pump assembly/gasket 1/1
3 Balancer 1
4 Plate 1
5 Relief valve assembly 1
6 Crankshaft 1

For installation, reverse the removal procedure.

Remove the parts in the order below.

Refer to “CRANKCASE”.

Refer to “REMOVING THE CRANKSHAFT/INSTALLING THE CRANKSHAFT AND BALANCER”.

Order | Job name/Part name | Q'ty | Remarks
--- | --- | --- | ---
1 | Oil strainer/O-ring | 1/1 | Remove the parts in the order below.
2 | Oil pump assembly/gasket | 1/1 |
3 | Balancer | 1 |
4 | Plate | 1 |
5 | Relief valve assembly | 1 |
6 | Crankshaft | 1 |
Disassembling the oil pump

For assembly, reverse the disassembly procedure.
CRANKSHAFT AND OIL PUMP

REMOVING THE CRANKSHAFT

1. Remove:
   • Crankshaft
     Use a crankcase separating tool ①.

<table>
<thead>
<tr>
<th>Crankcase separating tool:</th>
</tr>
</thead>
<tbody>
<tr>
<td>P/N. YU-01135-A, 90890-01135</td>
</tr>
</tbody>
</table>

CHECKING THE OIL PUMP

1. Check:
   • Rotor housings
   • Rotor cover
     Cracks/wear/damage → Replace.

2. Measure:
   • Tip clearance ③
     (between the inner rotor ① and the outer rotor ②)
   • Side clearance ④
     (between the outer rotor ② and the pump housing ③)
     Out of specification → Replace the oil pump.

<table>
<thead>
<tr>
<th>Tip clearance ③:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.03 ~ 0.10 mm</td>
</tr>
<tr>
<td>(0.0012 ~ 0.0039 in)</td>
</tr>
<tr>
<td>&lt;Limit&gt;: 0.15 mm (0.006 in)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Side clearance ④:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.03 ~ 0.10 mm</td>
</tr>
<tr>
<td>(0.0012 ~ 0.0039 in)</td>
</tr>
<tr>
<td>&lt;Limit&gt;: 0.12 mm (0.005 in)</td>
</tr>
</tbody>
</table>

3. Check:
   • Oil pump operation
     Unsmooth → Repeat steps #1 and #2 or replace the defective parts.
CHECKING THE RELIEF VALVE
1. Check:
   - Relief valve body 🔄
   - Relief valve 🔄
   - Spring 🔄
   - O-ring 🔄
   Damage/wear → Replace the defective parts(s).

CHECKING THE OIL STRAINER
1. Check:
   - Oil strainer 🔄
   - O-ring 🔄
   Damage → Replace.
   Contaminants → Clean with engine oil.

ASSEMBLING THE OIL PUMP
1. Install:
   - Inner rotor
   - Outer rotor
   - Oil pump shaft
   (with the recommended lubricant)

<table>
<thead>
<tr>
<th>Recommended lubricant:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine oil</td>
</tr>
</tbody>
</table>
CHECKING THE CRANKSHAFT

1. Measure:
   - Crank width \( \mathbb{A} \)
     Out of specification → Replace the crankshaft.

   - Side clearance \( \mathbb{D} \)
     Out of specification → Replace the crankshaft.

   - Runout \( \mathbb{C} \)
     Out of specification → Replace the crankshaft.

Crankshaft reassembling point:
The crankshaft ① and the crank pin ② oil passages must be properly interconnected with a tolerance of less than 1 mm (0.040 in).

CAUTION:
The buffer boss and woodruff key should be replaced when removed from the crankshaft.
INSTALLING THE CRANKSHAFT AND BALANCER

1. Install:
   - Crankshaft

**NOTE:**
Hold the connecting rod at the Top Dead Center (T.D.C.) with one hand while turning the nut of the installing tool with the other. Operate the installing tool until the crankshaft bottoms against the bearing.

**CAUTION:**
Apply engine oil to each bearing to protect the crankshaft against scratches and to make installation easier.

</tr>
</tbody>
</table>

Remove the parts in the order below.

For assembly, reverse the disassembly procedure.
REMOVING THE TRANSMISSION

1. Remove:
   • Sift cam ①
   • Sift fork assembly ②

*****************************************************

Removing steps:
   • Pull out the guide bar from the left crankcase.
   • Push down on the drive shaft, and then slide the shift fork assembly to remove the shift fork cam followers.
   • Remove the shift cam.
   • Remove the shift fork assembly.

*****************************************************

2. Remove:
   • Secondary shaft ①
   • Drive axle assembly ②
   • Chain ③

NOTE: Remove the secondary shaft, drive axle assembly, and chain as a set.

CHECKING THE SHIFT FORK

1. Check:
   • Shift fork cam follower ①
   • Shift fork pawl ②
     Scoring/bends/wear/damage → Replace.

2. Check:
   • Guide bar
     Roll the guide bar on a flat surface.
     Bends → Replace.

⚠️ WARNING

Do not attempt to straighten a bent guide bar.
3. Check:
- Shift fork movement (on the guide bar)
  Unsmooth operation → Replace the shift fork and the guide bar.

4. Check:
- Spring
  Cracks/damage → Replace.

CHECKING THE SHIFT CAM
1. Check:
- Shift cam grooves
  Scratches/wear/damage → Replace.

CHECKING THE DRIVE AXLE
1. Measure:
- Axle runout
  Use a centering device and a dial gauge.
  Out of specification → Replace the bent axle.

   Runout limit (drive axle):
   0.03 mm (0.001 in)

CHECKING THE HIGH WHEEL GEAR AND MIDDLE DRIVE GEAR
1. Check:
- Gear teeth
  Blue discoloration/pitting/wear → Replace.
- Mated dogs
  Rounded edges/cracks/missing portions → Replace.
2. Check:
- Gear movement
  Unsmooth → Repeat steps #1 or replace the defective parts.

3. Check:
- Circlip
  Bends/looseness/damage → Replace.

CHECKING THE SECONDARY SHAFT AND DRIVEN SPROCKET

1. Check
- Gear teeth
  Blue discoloration/pitting/wear → Replace.

2. Check:
- Gear movement
  Unsmooth → Repeat steps #1 or replace the defective parts.

3. Check:
- Circlip
  Bends/looseness/damage → Replace.

CHECKING THE CHAIN

1. Check
- Chain
  Cracks/shift → Replace the chain, secondary shaft and driven sprocket as a set.

CHECKING THE STOPPER LEVER AND STOPPER WHEEL

1. Check
- Stopper lever pawl ①
  Bends/damage/wear → Replace the stopper lever and stopper wheel as a set.
- Stopper wheel ②
  Damage/wear → Replace the stopper wheel and stopper lever as a set.
- Shaft ③
  Bends/damage/wear → Replace.
ASSEMBLING THE SHIFT FORK ASSEMBLY
1. Install:
   - Guide bar ①
   - Shift fork 2 ②
   - Long spring ③
   - Shift fork 1 ④
   - Short spring ⑤

INSTALLING THE TRANSMISSION
1. Install:
   - Stopper lever
   - Shaft ①
   - Chain ②
   - Drive axle assembly ③
   - Secondary shaft ④
   - Shift fork assembly ⑤
   - Shift cam ⑥
   - Low wheel gear

2. Check:
   - Shift operation
     Unsmooth operation → Repair.

NOTE:
- Oil each gear and bearing thoroughly.
- Before assembling the crankcase, be sure that the transmission is in neutral and that the gears turn freely.

</tbody>
</table>
REMOVING THE MIDDLE DRIVE SHAFT
1. Straighten:
   ● Punched portion of the nut (middle drive pinion gear)
2. Loosen:
   ● Nut (middle drive pinion gear) ①

NOTE: Secure the middle drive shaft in the vise with a clean rag.

3. Remove:
   ● Nut (middle drive pinion gear)
   ● Middle drive pinion gear
   ● Shim(s)

REMOVING THE MIDDLE DRIVEN SHAFT
1. Remove:
   ● Universal joint

*****************************************************
Removal steps:
● Remove the circlips ①.
● Place the U-joint in a press.
● With a suitable diameter pipe ② beneath the yoke ③, press the bearing ④ into the pipe as shown.

NOTE: It may be necessary to lightly tap the yoke with a punch.

● Repeat the steps for the opposite bearing.
● Remove the yoke.

NOTE: It may be necessary to lightly tap the yoke with a punch.

*****************************************************
2. Remove:
- Nut ①
- Washer
- Universal joint yoke

**NOTE:**
Use the universal joint holder ② to hold the universal joint yoke.

- Universal joint holder:
P/N. YM-04062

3. Remove:
- Nut ①
- Washer
- Coupling gear ②

**NOTE:**
Use the coupling gear/middle shaft tool ③ to hold the coupling gear.

- Coupling gear/middle shaft tool
P/N. YM-01230,90890-0229

4. Remove:
- Bearing housing assembly ①

**Removal steps:**
- Clean the outside of the middle driven shaft.
- Place the middle driven shaft onto a hydraulic press.

**CAUTION:**
- Never directly press the shaft end with a hydraulic press, this will result in damage to the shaft thread.
- Install the suitable socket ② on the shaft end to protect the thread from damage.
- Press the shaft end and remove the bearing housing.
5. Remove:
- Bearing retainer
- Bearing

*********************************************************************************
Removal steps:
- Attach the folded rag ①.
- Secure the bearing housing edge in the vise.
- Attach the bearing retainer wrench ②.

CAUTION: The middle driven shaft bearing retainer has left-handed threads. To loosen the retainer turn it clockwise.

- Remove the bearing retainer and bearing.

*********************************************************************************

Bearing retainer wrench:
P/N. YM-04128, 90890-04128

6. Remove:
- Front drive shaft coupling
- Oil seal ①
- Bearing retainer ②
- Bearing

NOTE: Attach the ring nut wrench ③.

CAUTION: The middle driven shaft bearing retainer has left-handed threads. To loosen the retainer turn it clockwise.

Ring nut wrench:
P/N. YM-38404, 90890-01430

7. Remove:
- Middle drive shaft ① (with bearing)
CHECKING THE PINION GEAR

1. Check
   • Gear teeth (drive pinion gear) ①
   • Gear teeth (driven pinion gear) ②
     Pitting/galling/wear → Replace.

2. Check
   • O-ring
     Damage → Replace.
   • Bearings
     Pitting/damage → Replace.

3. Check:
   • U-joint movement
     Roughness → Replace U-joint.

MIDDLE DRIVE AND DRIVEN GEAR SHIM SELECTION

When the drive and driven gear, bearing housing assembly and/or crankcase replaced, be sure to adjust the gear shim ① and ②.

1. Select:
   • Middle drive gear shim ①
   • Middle driven gear shim ②

****************************************************
Selection steps:
• Position middle drive and driven gear by using shims ① and ② with their respective thickness calculated from information marked on crankcase, bearing housing and drive gear end.

① Shim thickness “A”
② Shim thickness “B”

• To find shim thickness “A” use following formula:

Middle drive pinion gear shim thickness:
“A” = ③ + ④ – ⑤ – ⑥
Where:
- $a$ = a numeral (usually a decimal number) on the bearing housing is either added to or subtracted from "7.5".
- $b$ = 17.0
- $c$ = 55.0
- $d$ = a numeral (usually a decimal number) on the right crankcase specifies a thickness of "64.98".

Example:
1) If the bearing housing is marked "+02", ..... $a$ is 7.52,
2) $b$ is 17
3) $c$ is 55
4)If the crankcase (right) is marked "64.98", ..... $d$ is 64.98.
5) Therefore, the shim thickness is 0.50 mm.

\[
A = 7.52 + 64.98 - 17 - 55 = 0.50
\]
6) Round off hundredths digit and select appropriate shim(s).
   In the example above, the calculated shim thickness is 0.50 mm. The chart instructs you, however, to round off 0 to 0.

<table>
<thead>
<tr>
<th>Hundredths</th>
<th>Round value</th>
</tr>
</thead>
<tbody>
<tr>
<td>0, 1, 2</td>
<td>0</td>
</tr>
<tr>
<td>3, 4, 5, 6, 7</td>
<td>5</td>
</tr>
<tr>
<td>8, 9</td>
<td>10</td>
</tr>
</tbody>
</table>

Shims are supplied in the following thickness.

<table>
<thead>
<tr>
<th>Middle drive pinion gear shim</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thickness (mm)</td>
</tr>
<tr>
<td>0.10</td>
</tr>
<tr>
<td>0.15</td>
</tr>
<tr>
<td>0.20</td>
</tr>
</tbody>
</table>
To find shim thickness “B” use the following formula:

\[
B = \text{Middle driven pinion gear shim thickness:} \\
\text{“B”} = \Theta - \text{f} + \text{g} - \text{h} + \text{i} - 0.05
\]

Where:
- \(\Theta\) = a numeral (usually a decimal number) on the bearing housing is either added to or subtracted from “76”.
- \(\text{f}\) = a numeral (usually a decimal number) on the middle driven pinion gear is either added to or subtracted from “60”.
- \(\text{g}\) = a numeral (usually a decimal number) on the middle driven pinion gear is either added to or subtracted from “80.5”.
- \(\text{h}\) = a numeral (usually a decimal number) on the left crankcase specifies a thickness of “97.29”.
- \(\text{i}\) = a numeral (usually a decimal number) on the right crankcase specifies a thickness of “1.67”.

Example:
1) If the bearing housing is marked “–06”, ..... \(\Theta\) is 75.94.
2) If the driven pinion gear is marked “+0”, ..... \(\text{f}\) is 60.00.
3) If the driven pinion gear is marked “–13”, ..... \(\text{g}\) is 80.37.
4) If the crankcase (left) is marked “97.29”, ..... \(\text{h}\) is 97.29.
5) If the crankcase (right) is marked “1.67”, ..... \(\text{i}\) is 1.67.
6) Therefore, the shim thickness is 0.64 mm.

\[
B = 75.94 - 60.00 + 80.37 - 97.29 + 1.67 - 0.05 = 0.64
\]
6) Round off hundredths digit and select appropriate shim(s).
In the example above, the calculated shim thickness is 0.64 mm. The chart instructs you, however, to round off 4 to 5.

<table>
<thead>
<tr>
<th>Hundredths</th>
<th>Round value</th>
</tr>
</thead>
<tbody>
<tr>
<td>0, 1, 2</td>
<td>0</td>
</tr>
<tr>
<td>3, 4, 5, 6, 7</td>
<td>5</td>
</tr>
<tr>
<td>8, 9</td>
<td>10</td>
</tr>
</tbody>
</table>

Shims are supplied in the following thickness.

<table>
<thead>
<tr>
<th>Middle drive pinion gear shim</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thickness (mm)</td>
</tr>
<tr>
<td>0.10 0.40</td>
</tr>
<tr>
<td>0.15 0.50</td>
</tr>
<tr>
<td>0.20 0.60</td>
</tr>
<tr>
<td>0.30</td>
</tr>
</tbody>
</table>

**INSTALLING THE MIDDLE DRIVEN SHAFT**

1. Install:
   - Bearing retainer

\[ \times 80 \text{Nm (8.0 m \cdot kg, 58 ft \cdot lb)} \]

**NOTE:**
Attach the ring nut wrench.

**CAUTION:**
The middle driven shaft bearing retainer has left-handed threads. To tighten the retainer turn it counterclockwise.
2. Install:
- Bearing retainer ①

*************************************************

**Installation steps:**
- Attach the folded rag ②.
- Secure the bearing housing edge in the vise.
- Attach the bearing retainer wrench ③.

<table>
<thead>
<tr>
<th>Bearing retainer wrench:</th>
</tr>
</thead>
<tbody>
<tr>
<td>P/N. YM-04128, 90890-04128</td>
</tr>
</tbody>
</table>

- Tighten the bearing retainer.

**CAUTION:**
The middle driven shaft bearing retainer has left-handed threads. To tighten the retainer turn it counterclockwise.

<table>
<thead>
<tr>
<th>Bearing retainer:</th>
</tr>
</thead>
<tbody>
<tr>
<td>110 Nm (11.0 m • kg, 80 ft • lb)</td>
</tr>
</tbody>
</table>

*************************************************

3. Install:
- Shims ①
- Bearing housing

**NOTE:**
Install the shims so that the tabs are positioned as shown in the illustration.

4. Install:
- Universal joint yoke (rear side)
- Washer
- Nut ①

**NOTE:**
Use the universal joint holder ② to hold the yoke.

<table>
<thead>
<tr>
<th>Universal joint holder:</th>
</tr>
</thead>
<tbody>
<tr>
<td>P/N. YM-04062, 90890-04062</td>
</tr>
</tbody>
</table>
5. Install:
- Universal joint

***************************************************

**Installation steps:**
- Install the opposite yoke into the U-joint.
- Apply wheel bearing grease to the bearings.
- Install the bearing ① onto the yoke.

**CAUTION:**
Check each bearing. The needles can easily fall out of their races. Slide the yoke back and forth on the bearings; the yoke will not go all the way onto a bearing if a needle is out of place.

- Press each bearing into the U-joint using a suitable socket.

**NOTE:**
The bearing must be inserted far enough into the U-joint so that the circlip can be installed.

- Install the circlips ② into the groove of each bearing.

***************************************************

**INSTALLING THE MIDDLE DRIVE SHAFT**

1. Tighten:
   - Nut (middle drive pinion gear) ① New
     \[145 \text{Nm} (14.5\text{ m\cdot kg}, 105\text{ ft\cdot lb})\]

**NOTE:**
Secure the middle drive shaft in the vise with a clean rag.

2. Lock the threads with a drift punch.
MEASURING THE MIDDLE GEAR BACKLASH

1. Measure:
- Gear lash

<table>
<thead>
<tr>
<th>Middle gear lash:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.1 ~ 0.3 mm (0.004 ~ 0.012 in)</td>
</tr>
</tbody>
</table>

Measurement steps:
- Temporary install the right crankcase.
- Wrap a rag ② around a screwdriver ③, and then insert it into the installation hole ① of the left crankcase speed sensor to hold the middle driven gear.
- Attach the gear lash measurement tool ③ and dial gauge ④.

<table>
<thead>
<tr>
<th>Gear lash measurement tool:</th>
</tr>
</thead>
<tbody>
<tr>
<td>P/N. YM-01467, 90890-01467</td>
</tr>
</tbody>
</table>

ₐ 46 mm (1.8 in)
- Measure the gear lash while rotating the middle driven shaft back and forth.

**NOTE:**
Measure the gear lash at 4 positions. Rotate the middle driven gear 90° each time.

- If the gear lash is incorrect, adjust the gear lash by middle driven pinion gear shims and/or middle drive pinion gear shim(s).
Removing the radiator
Remove the parts in the order below.

1. Plastic clamp
   - Quantity: 1
   - Remarks: Disconnect.

2. Thermo switch coupler
   - Quantity: 1
   - Remarks: Disconnect.

3. Coolant reservoir hose
   - Quantity: 1
   - Remarks: Disconnect.

4. Radiator fan breather hose
   - Quantity: 1

Seat and side panels
Refer to “SEAT AND SIDE PANELS” in CHAPTER 3.

Front carrier, front bumper and front grill
Refer to “FRONT CARRIER, FRONT BUMPER AND FRONT GRILL” in CHAPTER 3.

Handlebar cover, fuel tank cover and front fender
Refer to “HANDLEBAR COVER, FUEL TANK COVER AND FRONT FENDER” in CHAPTER 3.

Left footrest board
Refer to “FOOTREST BOARDS” in CHAPTER 3.

Coolant
Drain.
Refer to “CHANGING THE COOLANT” in CHAPTER 3.
<table>

</table>
CHECKING THE RADIATOR

1. Check:
   - Radiator fins
     Obstruction → Clean.
     Apply compressed air to the rear of the radiator.
     Damage → Repair or replace.

   **NOTE:**
   Straighten any flattened fins with a thin, flat-head screwdriver.

2. Check:
   - Radiator hoses
     Cracks/damage → Replace.

3. Measure:
   - Radiator cap opening pressure
     Below the specified pressure → Replace the radiator cap.

   **Radiator cap opening pressure:**
   93.3 ~ 122.7 kPa
   (0.933 ~ 1.227 kg/cm², 13.53 ~ 17.79 psi)

   **Measurement steps:**
   - Install the radiator cap tester ① and adapter ② onto the radiator cap ③.

   **Radiator cap tester:**
   P/N. YU-24460-01, 90890-01325
   **Adapter:**
   P/N. YU-33984, 90890-01352

   - Apply the specified pressure for ten seconds and make sure that there is no drop in pressure.

4. Check:
   - Radiator fan
     Damage → Replace.
     Malfunction → Check and repair.
     Refer to “COOLING SYSTEM” in CHAPTER 9.
INSTALLING THE RADIATOR

1. Fill:
   * Cooling system
     (with the specified amount of the recommended coolant)
     Refer to “CHANGING THE COOLANT” in CHAPTER 3.

2. Check:
   * Cooling system
     Leaks → Repair or replace any faulty part.
Removing the thermostat
Seat and fuel tank side panel (right)
Coolant

1 Radiator inlet hose 1
2 Thermostat cover 1
3 Thermostat 1

Remarks
Remove the parts in the order below.
Refer to “SEAT AND SIDE PANELS” in CHAPTER 3.
Drain.
Refer to “CHANGING THE COOLANT” in CHAPTER 3.

For installation, reverse the removal procedure.

10 Nm (1.0 m·kg, 7.2 ft·lb)
CHECKING THE THERMOSTAT

1. Check:
   - Thermostat ①
     Does not open at 50 ~ 54 °C (122 ~ 158 °F) → Replace.

*****************************************************

Checking steps:
   - Suspend the thermostat in a container filled with water.
   - Slowly heat the water.
   - Place a thermometer in the water.
   - While stirring the water, observe the thermostat and thermometer’s indicated temperature.

*****************************************************

1. Thermostat
2. Thermometer
3. Water
4. Container
   A] Fully closed
   B] Fully open

NOTE: If the accuracy of the thermostat is in doubt, replace it. A faulty thermostat could cause serious overheating or overcooling.

2. Check:
   - Thermostat housing cover
   - Thermostat housing
     Cracks/damage → Replace.

INSTALLING THE THERMOSTAT

1. Install:
   - Thermostat ①
   - Thermostat housing cover

NOTE: Install the thermostat with its breather hole ③ facing up.

2. Fill:
   - Cooling system
     (with the specified amount of the recommended coolant)
     Refer to “CHANGING THE COOLANT” in CHAPTER 3.

3. Check:
   - Cooling system
     Leak → Repair or replace any faulty part.
**Removing the water pump**

- Seat, fuel tank side panel (left) and engine side cover
- Left footrest board
- Coolant reservoir

DISASSEMBLING THE WATER PUMP

1. Remove:
   - Rubber damper holder ①
   - Rubber damper ②
     (from the impeller, with a thin, flathead screwdriver)

   **NOTE:**
   Do not scratch the impeller shaft.

2. Remove:
   - Water pump seal ①

   **NOTE:**
   Tap out the water pump seal from the inside of the water pump housing.

3. Remove:
   - Bearing ①
   - Oil seal ②

   **NOTE:**
   Tap out the bearing and oil seal from the outside of the water pump housing.

CHECKING THE WATER PUMP

1. Check:
   - Water pump housing cover ①
   - Water pump housing ②
   - Impeller ③
   - Rubber damper ④
   - Rubber damper holder ⑤
     Cracks/damage/wear → Replace.

2. Check:
   - Water pump seal
   - Oil seal
   - Water pump outlet pipe
     Cracks/damage/wear → Replace.
   - Bearing
     Rough movement → Replace.
ASSEMBLING THE WATER PUMP

1. Install:
   - Oil seal (into the water pump housing)
   
   **NOTE:**
   - Before installing the oil seal, apply tap water or coolant onto its outer surface.
   - Install the oil seal with a socket that matches its outside diameter.

2. Install:
   - Water pump seal (into the water pump housing)
   
   **CAUTION:**
   Never lubricate the water pump seal surface with oil or grease.

   **NOTE:**
   Install the water pump seal with the special tools.

   - Mechanical seal installer:
     P/N. YM-33221, 90890-04078
   - Middle driven shaft bearing driver:
     P/N. YM-04058-1, 90890-04058

3. Install:
   - Rubber damper
   - Rubber damper holder

   **NOTE:**
   Before installing the rubber damper, apply tap water or coolant onto its outer surface.
4. Measure:
- Impeller shaft tilt
  Out of specification → Repeat steps (3) and (4).

**CAUTION:**
Make sure that the rubber damper and rubber damper holder are flush with the impeller.

Max. impeller shaft tilt: 0.15 mm (0.006 in)

1. Straightedge
2. Impeller
Removing the carburetor
Remove the parts in the order below.
Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK” in CHAPTER 3.

Exhaust pipe protector
Refer to “ENGINE REMOVAL” in CHAPTER 3.

<td>For assembly, reverse the disassembly procedure.</td>
</tr>
</tbody>
</table>

For assembly, reverse the disassembly procedure.
NOTE:
Before disassembling the carburetor, make sure to note the number of times the pilot screw is turned out from the seated position to its set position.

CHECKING THE CARBURETOR

1. Check:
   - Carburetor body
   - Float chamber
     Cracks/damage → Replace.
   - Fuel passage
     Contamination → Clean as indicated.
   - Fuel chamber body
     Contamination → Clean.

Cleaning steps:
- Wash the carburetor in a petroleum based solvent.
  (Do not use any caustic carburetor cleaning solution.)
- Blow out all of the passages and jets with compressed air.

2. Check:
   - Float ①
   - Float tang ②
     Damage → Replace.

3. Check:
   - Valve seat ①
   - Needle valve ②
   - O-ring ③
     Contamination/wear/damage → Replace as a set.

NOTE:
Always replace the needle valve and valve seat as a set.
4. Check:
- Piston valve ①
  Scratches/wear/damage → Replace.
- Rubber diaphragm ②
  Tears → Replace.

5. Check:
- Vacuum chamber cover ①
- Spring ②
  Cracks/damage → Replace.

6. Check:
- Diaphragm (coasting enricher) ①
- Spring ②
- Cover ③
  Tears (diaphragm) /damage → Replace.

7. Check:
- Jet needle ①
- Main jet ②
- Needle jet ③
- Pilot air jet ④
- Pilot jet ⑤
- Starter jet ⑥
- Starter plunger ⑦
  Bends/wear/damage → Replace.
- Blockage → Blow out the jets with compressed air.
8. Check:
- Free movement (piston valve)
  Sticks → Replace the piston valve guide and the piston valve.
  Insert the piston valve into the carburetor body, and check for free movement.

9. Check:
- Free movement (throttle valve)
  Sticks → Replace.

**ASSEMBLING THE CARBURETOR**

**NOTE:**
Before assembling the carburetor, make sure to turn out the pilot screw the same number of times, as noted before disassembly, from the seated position to the set position.

**CAUTION:**
Before assembling, wash all of the parts in a clean petroleum based solvent.

1. Measure:
- Float height @
  Out of specification → Adjust.

<table>
<thead>
<tr>
<th>Float height (F.H.):</th>
</tr>
</thead>
<tbody>
<tr>
<td>13 mm (0.51 in)</td>
</tr>
</tbody>
</table>

**Measurement and adjustment steps:**
- Hold the carburetor in an upside down position.
- Measure the distance from the front mating surface of the float chamber (gasket removed) to the top of the float.

**NOTE:**
The float arm should be resting on the needle valve, but not compressing it.

- If the float height is not within the specification, inspect the valve seat and needle valve.
CARBURETOR

- If either is worn, replace them both.
- If both are fine, adjust the float height by bending the float tang 1 on the float.
- Recheck the float height.

*****************************************************

ADJUSTING THE FUEL LEVEL

1. Measure:
   - Fuel level 2
     Out of specification → Adjust.

   **Fuel level:**
   - 4.5 mm (0.18 in)
     Above the float chamber mating surface

   *****************************************************

   Measurement and adjustment steps:
   - Place the machine on a level surface.
   - Connect the fuel level gauge 1 to the drain pipe 2.

   **Fuel level gauge:**
   - P/N. YM-01312-A, 90890-01312

   - Loosen the drain screw 3.
   - Hold the gauge vertically next to the float chamber line.
   - Measure the fuel level 2 with the gauge.
   - If the fuel level is incorrect, adjust the fuel level.
   - Remove the carburetor.
   - Inspect the valve seat and needle valve.
   - If either is worn, replace them both.
   - If both are fine, adjust the float level by bending the float tang 4 slightly.
   - Install the carburetor.
   - Recheck the fuel level.

   *****************************************************
DRIVE TRAIN

TROUBLESHOOTING

The following conditions may indicate damaged shaft drive components:

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible Causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. A pronounced hesitation or “jerky” movement during acceleration,</td>
<td>A. Bearing damage.</td>
</tr>
<tr>
<td>deceleration, or sustained speed. (This must not be confused with</td>
<td>B. Improper gear lash.</td>
</tr>
<tr>
<td>engine surging or transmission characteristics.)</td>
<td>C. Gear tooth damage.</td>
</tr>
<tr>
<td>2. A “rolling rumble” noticeable at low speed; a high-pitched whine;</td>
<td>D. Broken drive shaft.</td>
</tr>
<tr>
<td>a “clunk” from a shaft drive component or area.</td>
<td>E. Broken gear teeth.</td>
</tr>
<tr>
<td>3. A locked-up condition of the shaft drive train mechanism, no power</td>
<td>F. Seizure due to lack of lubrication.</td>
</tr>
<tr>
<td>transmitted from the engine to the front and/or rear wheel.</td>
<td>G. Small foreign objects lodged between the moving</td>
</tr>
<tr>
<td></td>
<td>parts.</td>
</tr>
</tbody>
</table>

**NOTE:** Areas A, B, and C above may be extremely difficult to diagnose. The symptoms are quite subtle and difficult to distinguish from normal machine operating noise. If there is reason to believe these components are damaged, remove the components and inspect them.

**Inspection notes**

1. Investigate any unusual noises.

The following “noises” may indicate a mechanical defect:

- A “rolling rumble” noise during coasting, acceleration, or deceleration. The noise increases with front and/or rear wheel speed, but it does not increase with higher engine or transmission speeds.
  Diagnosis: Possible wheel bearing damage.

- A “whining” noise that varies with acceleration and deceleration.
  Diagnosis: Possible incorrect reassembly, too-little gear lash.
**CAUTION:**

Too little gear lash is extremely destructive to the gear teeth. If a test ride following reassembly indicates this condition, stop riding immediately to minimize gear damage.

c.A slight “thunk” evident at low speed operation. This noise must be distinguished from normal machine operation.

Diagnosis: Possible broken gear teeth.

---

**WARNING**

Stop riding immediately if broken gear teeth are suspected. This condition could result in the shaft drive assembly locking up, causing loss of control of the machine and possible injury to the rider.

---

2. Inspect:
- Drained oil

  Drained oil shows large amounts of metal particles → Check the bearing for seizure.

**NOTE:**

A small amount of metal particles in the oil is normal.

---

3. Inspect:
- Oil leakage

---

**Inspection steps:**
- Clean the entire machine thoroughly, then dry it.
- Apply a leak-localizing compound or dry powder spray to the shaft drive.
- Road test the machine for the distance necessary to locate the leak.

  Leakage → Inspect the component housing, gasket, and/or seal for damage.

  Damage → Replace the component.

**NOTE:**

- An apparent oil leak on a new or nearly new machine may be the result of a rust-preventative coating or excessive seal lubrication.
- Always clean the machine and recheck the suspected location of an apparent leakage.

---

Troubleshooting chart

When basic condition “a” and “b” exist, check the following points:

- Elevate and spin both wheels. Feel for wheel bearing damage.
  - YES: Replace the wheel bearing.
    (Refer to “STEERING SYSTEM” and “REAR KNuckle AND STABILIZER” in CHAPTER 8.)
  - NO: Check the wheel nuts and hub nuts for tightness.
    - NO: Torque to specification.
      (Refer to “FRONT WHEELS AND BRAKE DISCS” and “REAR WHEELS AND BRAKE DISC” in CHAPTER 8.)
    - YES: Check the front constant velocity joint. Feel for bearing damage.
      - NO: Constant velocity joint bearings and differential gear bearings are probably not damaged. Repeat the test or remove the individual components.
      - YES: Remove the drive shaft components.
  - NO: Check the rear brake adjustment.
    - NO: Adjust per instructions.
      (Refer to “ADJUSTING THE REAR BRAKE” in CHAPTER 3.)
    - YES: Check the rear constant velocity joint. Feel for bearing damage.
      - NO: Constant velocity joint bearings and final drive gear bearings are probably not damaged. Repeat the test or remove the individual components.
      - YES: Remove the drive shaft components.

DISASSEMBLING THE UNIVERSAL JOINT

1. Remove:
   - Universal joint

   ****************************************************

   Removal steps:
   - Remove the circlips ①.
   - Place the U-joint in a press.
   - With a suitable diameter pipe ② beneath the yoke ③, press the bearing ④ into the pipe as shown.

   NOTE: It may be necessary to lightly tap the yoke with a punch.

   - Repeat the steps for the opposite bearing.
   - Remove the yoke.

   NOTE: It may be necessary to lightly tap the yoke with a punch.

   ****************************************************

2. Remove:
   - Universal joint yoke
     Use a universal joint holder ①.

   Universal joint holder:
   P/N. YM-04062, 90890-04062
REMOVING THE RING GEAR
1. Remove:
   - Ring gear ①

NOTE: ______________________
The ring gear and the differential gear cover should be fastened together. Do not disassemble the differential gear.

CAUTION: ______________________
The differential gears are assembled into a proper unit at the factory by means of specialized equipment. Do not attempt to disassemble this unit. Disassembly will result in the malfunction of the unit.

CHECKING THE CONSTANT VELOCITY JOINT
1. Check:
   - Double off-set joint spline
   - Ball joint spline
   - Shaft spline
     Wear/damage → Replace.
2. Check:
   - Dust boots
     Cracks/damage → Replace.

CAUTION: ______________________
Always use a new boot band.

3. Check:
   - Balls and ball races
   - Inner surface of double off-set joint
     Pitting/wear/damage → Replace.

CHECKING THE DIFFERENTIAL GEAR
1. Check:
   - Gear teeth
     Pitting/galling/wear → Replace drive pinion gear and ring gear as a set.
   - Bearing
     Pitting/damage → Replace.
   - Oil seal
   - O-ring
     Damage → Replace.
2. Check:
- Drive shaft splines
- Universal joints
- Front drive gear splines
  Wear/damage → Replace.
- Spring
  Fatigue → Replace.
  Move the spring up and down.

3. Check:
- Front drive shaft
  Bends → Replace.

**WARNING**
Do not attempt to straighten a bent shaft; this may dangerously weaken the shaft.

**CHECKING THE GEAR MOTOR**
1. Check:
   - Gear motor

Checking steps:
- Connect two C size batteries to the gear motor terminals ①. (as shown illustration)

**CAUTION:**
Do not use a 12 V battery to operate the pinion gear.

[A] Check that the pinion gear ② turns counterclockwise.
[B] Check that the pinion gear ② turns clockwise.

**NOTE:**
Be sure not to disassemble gear motor and remove the pinion gear.

**ASSEMBLING THE FRONT CONSTANT VELOCITY JOINT**
1. Apply:
   - Molybdenum disulfide grease
     (into the ball joint assembly)

**NOTE:**
Molybdenum disulfide grease is included in the repair kit.
2. Install:
- Dust boots ①
- Boot bands ②, ③ New

*******************************************************

Installation steps:
- Apply molybdenum disulfide grease into the dust boots.

| Molybdenum disulfide grease: 40 g (1.4 oz) per dust boot |

- Install the dust boots.
- Install the dust boot bands.

NOTE:  
- The new boot bands may differ from the original ones.
- The dust boots should be fastened with the boot bands ③ at the grooves in the joint shaft.

*******************************************************

3. Check:
- Free play (thrust movement)
  Excessive play → Replace the joint assembly.

ASSEMBLING THE DIFFERENTIAL GEAR
1. Measure:
- Gear lash
  Refer to “MEASURING AND ADJUSTING THE DIFFERENTIAL GEAR LASH”.
2. Install:
- Gear motor
Installation steps:

- Slide the shift fork sliding gear 1, which is installed to the differential gear, to the left to put it into the 2WD mode.
- Connect two C size batteries to the gear motor terminal 2 to operate the pinion gear 3, and operate it until the paint mark 4 on the gear is aligned with the paint mark 5 on the gear motor case.

**CAUTION:**
Do not use a 12 V battery to operate the pinion gear.

- Insert 8 mm bolts 6 into the gear motor 7 and use them as a guide to set the motor on the differential gear assembly 8 so that the shift fork sliding gear 9 does not move.

**CAUTION:**
If the position of the shift fork sliding gear is moved, the position of the differential gear and the indicator light display may differ, and the 2WD or differential lock mode may not be activated.

- Remove the 8 mm bolts, and then install the motor with the gear motor bolts.

| Bolts (gear motor) | 13 Nm (1.3 m • kg, 9.4 ft • lb) |

3. Install:

- Universal joint yoke
- O-ring
- Washer
- Nut

Use a universal joint holder 1.

**Universal joint holder:**
P/N. YM-04062, 90890-04062
4. Check:
- Differential gear operation
  Unsmooth operation → Replace the differential gear assembly.
  Insert the double off-set joint into the differential gear, and turn the gear back and forth.

INSTALLING THE UNIVERSAL JOINT
1. Install:
   - Universal joint

*******************************************************************************

Installation steps:
- Install the opposite yoke into the U-joint.
- Apply wheel bearing grease to the bearings.
- Install the bearing 1 onto the yoke.

CAUTION:
Check each bearing. The needles can easily fall out of their races. Slide the yoke back and forth on the bearings; the yoke will not go all the way onto a bearing if a needle is out of plate.

- Press each bearing into the U-joint using a suitable socket.

NOTE: The bearing must be inserted far enough into the U-joint so that the circlip can be installed.

- Install the circlips 2 into the groove of each bearing.
*******************************************************************************
MEASURING AND ADJUSTING THE DIFFERENTIAL GEAR LASH

Measuring the differential gear lash

1. Secure the gear case in a vise or another supporting device.

2. Remove:
   - Drain plug
   - Gasket

3. Install:
   - A bolt of the specified size ① (into the drain plug hole)

**CAUTION:**

Finger tighten the bolt until it holds the ring gear. Otherwise, the ring gear will be damaged.

4. Attach:
   - Gear lash measurement tool ①
   - Dial gauge ②

**Gear lash measurement tool:**
P/N. YM-01467, 90890-01467

① Measuring point is 21 mm (0.83 in)

5. Measure:
   - Gear lash
   - Gently rotate the gear coupling from engagement to engagement.

**Differential gear lash:**
0.05 ~ 0.25 mm
(0.0020 ~ 0.0098 in)

**NOTE:**
Measure the gear lash at four positions. Rotate the shaft 90° each time.
Adjusting differential gear lash
1. Remove:
   - Shim(s) (left) 1
   - Differential gear assembly 2
   - Shim(s) (right) 3

2. Adjust:
   - Gear lash

***********************************************
Adjustment steps:
   - Select the suitable shims using the following chart.

<table>
<thead>
<tr>
<th>Too little gear lash</th>
<th>Reduce shim thickness.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too large gear lash</td>
<td>Increase shim thickness.</td>
</tr>
</tbody>
</table>

   - If it is necessary to increase by more than 0.05 mm (0.002 in):
     Reduce right shim thickness by 0.1 mm (0.004 in) for every 0.1 mm (0.004 in) of left shim increase.

   - If it is necessary to reduce by more than 0.1 mm (0.004 in):
     Increase right shim thickness by 0.1 mm (0.004 in) for every 0.1 mm of left shim decreased.

<table>
<thead>
<tr>
<th>Ring gear shim (left and right)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thickness (mm)</td>
</tr>
<tr>
<td>----------------</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>
CHECKING THE DIFFERENTIAL GEAR OPERATION

1. Block the rear wheels, and elevate the front wheels by placing a suitable stand under the frame.
2. Remove the wheel cap and cotter pin from the axle nut (right or left).
3. Measure the starting torque of the front wheel (i.e., differential gear preload) with the torque wrench.

NOTE:

- Repeat this step several times to obtain an average figure.
- During this test, the other front wheel will turn in the opposite direction.

Front wheel starting torque: (differential gear preload):

- New unit: 17 ~ 25 Nm (1.7 ~ 2.5 m·kg, 12 ~ 18 ft·lb)
- Minimum: 10 Nm (1.0 m·kg, 7.2 ft·lb)

4. Out of specification → Replace the differential gear assembly.
5. Within specification → Install the new cotter pin and wheel cap.
Removing the rear constant velocity joint, final drive gear assembly and drive shaft

- Final gear oil
- Rear arm (lower)
- Brake caliper assembly

</table>

**Tightening torques:**
- **40 Nm (4.0 m·kg, 29 ft·lb)**
- **23 Nm (2.3 m·kg, 17 ft·lb)**
- **16 Nm (1.6 m·kg, 11 ft·lb)**
- **70 Nm (7.0 m·kg, 50 ft·lb)**
- **170 Nm (17.0 m·kg, 125 ft·lb)**
- **21 Nm (2.1 m·kg, 15 ft·lb)**

Refer to "ASSEMBLING THE FINAL DRIVE GEAR".
ASSEMBLING THE REAR CONSTANT VELOCITY JOINT

1. Apply:
   - Lithium-soap base grease
     (into the ball joint assembly)

2. Install:
   - Dust boots ①
   - Boot bands ②, ③ New

****************************************************

Installation steps:
- Apply lithium-soap base grease into the dust boots.

Lithium-soap base grease:
- 50 g (1.8 oz) per dust boot (rear wheel side)
- 60 g (2.3 oz) per dust boot (final gear case side)

- Install the dust boots.
- Install the dust boot bands.

NOTE:
- The new boot bands may differ from the original ones.
- The dust boots should be fastened with the boot bands ③ at the grooves in the joint shaft.

****************************************************

3. Check:
- Free play (thrust movement)
  Excessive play → Replace the joint assembly.
REMOVING AND DISASSEMBLING THE FINAL DRIVE ROLLER BEARING

1. Remove:
   ● Roller bearing (ring gear) ①
     Use a suitable press tool ② and an appropriate support for the main housing.

2. Remove:
   ● Roller bearing (final drive pinion gear) ①

**Removal steps:**
   ● Heat the main housing only to 150 °C (302 °F).
   ● Remove the roller bearing outer race with an appropriately shaped punch ②.
   ● Remove the inner race from the final drive pinion gear.

**NOTE:**
The removal of the final drive pinion gear roller bearing is difficult and seldom necessary.

3. Install:
   ● Roller bearing (final drive pinion gear) New

**Installation steps:**
   ● Heat the main housing only to 150 °C (302 °F).
   ● Install the roller bearing outer race using the proper adapter.
   ● Install the inner race onto the drive pinion gear.

4. Install:
   ● Roller bearing ①
     Use a suitable press tool ② and a press to install the above components into the main housing.
POSITIONING THE FINAL DRIVE PINION GEAR AND RING GEAR
When the final drive pinion gear, ring gear, final gear case and/or ring gear bearing housing are replaced, be sure to adjust the positions of the final drive pinion gear and ring gear using the shim(s).

Final drive pinion gear shim selection
1. Select:
   ● Final drive pinion gear shim(s) ①

******************************************************************************
Selection steps:
● To find the final drive pinion gear shim thickness “A”, use the following formula.

Final drive pinion gear shim thickness:
“A” = ③ + (⑤ – ④) – ⑤

③ = 92.5 mm
④ = a numeral (usually a decimal number) on the pinion gear bearing housing either added to “34”
⑤ = a numeral (usually a decimal number) on the pinion gear bearing housing either added to “55”
⑥ = a numeral (usually a decimal number) on the final drive gear case either added to “112”

Example:
1) ③ = 92.5
2) If “98” is stamped on the pinion gear bearing housing,
   ④ = 34 + 0.98 = 34.98
3) If “48” is stamped on the pinion gear bearing housing,
   ⑤ = 55 + 0.48 = 55.48
4) If “03” is stamped on the final drive gear case,
   ⑥ = 112 + 0.03 = 112.03
5) Therefore, “A” is 0.97.
   “A” = 92.5 + (55.48 – 34.98) – 112.03
      = 0.97
6) Round off the hundredth digit and select the appropriate shim(s).
In the example above, the calculated number is 0.97. The chart instructs you to round off 7 to 5 at the hundredth place. Thus, the shim thickness is 0.95 mm.

<table>
<thead>
<tr>
<th>Hundredths</th>
<th>Rounded value</th>
</tr>
</thead>
<tbody>
<tr>
<td>0, 1, 2</td>
<td>0</td>
</tr>
<tr>
<td>3, 4, 5, 6, 7</td>
<td>5</td>
</tr>
<tr>
<td>8, 9</td>
<td>10</td>
</tr>
</tbody>
</table>

Shims are supplied in the following thicknesses.

<table>
<thead>
<tr>
<th>Final drive pinion gear shim</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thickness (mm)</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Ring gear shim selection
1. Select:
   ● Ring gear shim(s) ①

Selection steps:
   ● To find the ring gear shim thickness “B”, use the following formula.

Ring gear shim thickness:
“B” = ⑥ – ① – (⑨ + ⑩)

⑥ = a numeral (usually a decimal number) on the final drive gear case either added to “50”
① = a numeral (usually a decimal number) on the outside of the ring gear bearing housing and added to 1
⑨ = a numeral (usually a decimal number) on the inside of the ring gear either added to or subtracted from 35.00
\( h \) = bearing thickness (considered constant)

### Bearing thickness \( h \):

- **14.00 mm**

**Example:**

1. If "98" is stamped on the final drive gear case,
   \( \theta = 50 + 0.98 = 50.98 \)
2. If "55" is stamped on the ring gear bearing housing,
   \( f = 1 + 0.55 \)
   \( = 1.55 \)
3. If "–05" is stamped on the ring gear,
   \( g = 35 - 0.05 \)
   \( = 34.95 \)
4. \( h = 14.00 \)
5. Therefore, shim thickness "B" is 0.48.
   
   \[ B = 50.98 - 1.55 - (34.95 + 14.00) \]
   \( = 49.43 - 48.95 \)
   \( = 0.48 \)
6. Round off the hundredth digit and select the appropriate shim(s).

   In the example above, the calculated number is 0.48. The chart instructs you to round off 8 to 10 at the hundredth place.

   Thus, the shim thickness is 0.50 mm.

<table>
<thead>
<tr>
<th>Hundredths</th>
<th>Rounded value</th>
</tr>
</thead>
<tbody>
<tr>
<td>0, 1, 2</td>
<td>0</td>
</tr>
<tr>
<td>3, 4, 5, 6, 7</td>
<td>5</td>
</tr>
<tr>
<td>8, 9</td>
<td>10</td>
</tr>
</tbody>
</table>

Shims are supplied in the following thicknesses.

### Ring gear shim

<table>
<thead>
<tr>
<th>Thickness (mm)</th>
<th>0.25</th>
<th>0.30</th>
<th>0.35</th>
<th>0.40</th>
<th>0.45</th>
<th>0.50</th>
</tr>
</thead>
</table>

**************************************************************************************************
Thrust washer selection

1. Measure/select:
   - Ring gear thrust clearance “C”

******************************************************************************

Measurement steps:

- Place four pieces of Plastigauge® between the originally fitted thrust washer and the ring gear.
- Install the ring gear assembly and tighten the bolts to specification.

**NOTE:**
Do not turn the drive pinion gear and ring gear when measuring the clearance with Plastigauge®.

- Remove the ring gear assembly.
- Measure the thrust clearance. Calculate the width of the flattened Plastigauge®.

**Ring gear thrust clearance:**
0.1 ~ 0.2 mm (0.004 ~ 0.008 in)

- If out of specification, select the correct washer.

**Selection steps:**

- Select a suitable thrust washer using the following chart.

<table>
<thead>
<tr>
<th>Thrust washer thickness (mm)</th>
<th>1.2</th>
<th>1.3</th>
<th>1.4</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.5</td>
<td>1.6</td>
<td>1.7</td>
<td></td>
</tr>
<tr>
<td>1.8</td>
<td>1.9</td>
<td>2.0</td>
<td></td>
</tr>
<tr>
<td>2.1</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Repeat the measurement steps until the ring gear thrust clearance is within the specified limits.

******************************************************************************
Adjusting the ring gear stopper

1. Measure:
   - Ring gear stopper clearance "D"
     Use a feeler gauge ①.
     Out of specification → Adjust.

   | Ring gear stopper clearance “D”: |
   | 0.30 ~ 0.60 mm (0.012 ~ 0.024 in) |

   ① Ring gear
   ② Ring gear stopper

2. Remove:
   - Nut ①

3. Loosen:
   - Ring gear stopper ②

   ******************************

Adjusting steps:
   - Turn the ring gear stopper in or out until to the specified clearance.

   | Ring gear stopper clearance: |
   | 0.3 ~ 0.6 mm (0.012 ~ 0.024 in) |

   ******************************

4. Install:
   - Nut
   - Ring gear

   \[ \text{16 Nm (1.6 m\cdot kg, 11 ft\cdot lb)} \]

   **NOTE:**
   Use LOCTITE® on the ring gear stopper.
CHECKING THE DRIVE SHAFT
1. Check:
- Drive shaft (splines) ①
- Coupling gear (splines) ②
  Wear/damage → Replace.

CHECKING THE FINAL DRIVE GEAR
1. Check:
- Final drive gear case ①
- Ring gear bearing housing ②
  Cracks/damage → Replace.

NOTE:
When the final drive gear case and/or the ring gear bearing housing are replaced, be sure to adjust the shim of the final drive pinion gear and/or ring gear.

2. Check:
- Gear teeth
  Pitting/galling/wear → Replace the drive pinion gear and ring gear as a set.
- Oil seals
- O-rings
  Damage → Replace.
3. Check:
- Bearings
  Damage → Replace.

NOTE:
- Reusing roller bearings is acceptable, but Yamaha recommends installing new ones. Do not reuse the oil seal.
- When the final drive pinion gear and/or ring gear are replaced, be sure to adjust the shim of the final drive pinion gear and/or ring gear.
MEASUREMENT AND ADJUSTING THE FINAL GEAR LASH
Final gear lash measurement
1. Secure the gear case in a vise or another supporting device.
2. Remove:
   • Drain plug
   • Gasket
3. Install:
   • A bolt of the specified size (into the drain plug hole)

**CAUTION:**
Finger tighten the bolt until it holds the ring gear. Otherwise, the ring gear will be damaged.

4. Attach:
   • Gear lash measurement tool
   • Dial gauge

**Gear lash measurement tool:**
P/N. YM-01231, 90890-01231

① Measuring point is 22 mm (0.87 in)

5. Measure:
   • Gear lash
   Gently rotate the gear coupling from engagement to engagement.

**Final gear lash:**
0.1 ~ 0.2 mm (0.004 ~ 0.008 in)

**NOTE:**
Measure the gear lash at four positions. Rotate the shaft 90° each time.
Final gear lash adjustment
1. Remove:
   - Bearing housing ①
   - Ring gear shim(s) ②
   - Ring gear ③
   - Thrust washer ④

2. Adjust:
   - Gear lash

*************************************************************
Adjustment steps:
   - Select a suitable shim(s) and thrust washer(s) using the following chart.

<table>
<thead>
<tr>
<th>Too little gear lash</th>
<th>Reduce shim thickness.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too large gear lash</td>
<td>Increase shim thickness.</td>
</tr>
</tbody>
</table>

- If increased by more than 0.2 mm (0.008 in): Reduce the thrust washer thickness by 0.2 mm (0.008 in) for every 0.2 mm of ring gear shim increase.
- If reduced by more than 0.2 mm (0.008 in): Increase the thrust washer thickness by 0.2 mm (0.008 in) for every 0.2 mm that the ring gear shim is decreased.

<table>
<thead>
<tr>
<th>Ring gear shim</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thickness (mm)</td>
</tr>
<tr>

</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

*************************************************************
ASSEMBLING THE FINAL DRIVE GEAR
1. Adjust:
   - Final gear lash
     Refer to “MEASUREMENT AND ADJUSTING THE FINAL GEAR LASH”.

2. Check:
   - Final drive gear operation
     Unsmooth operation → Replace the final drive gear assembly.
     Insert the double off-set joint into the final drive gear, and turn the gear back and forth.

INSTALLING THE FINAL DRIVE GEAR
1. Lubricate:
   - Drive shaft
   - Coupling gear
   - O-ring
   - Oil seal
   - Bearing

<table>
<thead>
<tr>
<th>Recommended lubricant:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yamaha Grizzly grease</td>
</tr>
</tbody>
</table>

2. Install:
   - Drive shaft
   - Coupling gear
3. Install:
   - Final drive gear
   - Nuts

55 Nm (5.5 m • kg, 40 ft • lb)
Removing the front wheel

<table>
<thead>
<tr>
<th>Order</th>
<th>Job name/Part name</th>
<th>Q'ty</th>

<td>Refer to “INSTALLING THE FRONT-WHEEL HUB”.</td>
</tr>
<tr>
<td>4</td>
<td>Axle nut</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>
5 Brake caliper assembly 1

6 Front wheel hub 1

7 Brake disc 1

Note:
Do not squeeze the brake lever when the brake caliper is off of the brake disc as the brake pads will be forced shut.

For installation, reverse the removal procedure.
CHECKING THE FRONT WHEEL

1. Check:
   - Wheel

2. Measure:
   - Wheel runout
     Over the specified limit → Replace the wheel or check the wheel bearing play ①.

<table>
<thead>
<tr>
<th>Wheel runout limit:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Radial ②: 2.0 mm (0.08 in)</td>
</tr>
<tr>
<td>Lateral ③: 2.0 mm (0.08 in)</td>
</tr>
</tbody>
</table>

3. Check:
   - Wheel balance
     Out of balance → Adjust.

**WARNING**
After replacing the tire, ride conservatively to allow the tire to be properly seated in the rim. Failure to do so may cause an accident resulting in machine damage and possible operator injury.

CHECKING THE FRONT WHEEL HUB

1. Check:
   - Wheel hub ①
     Cracks/damage → Replace.
   - Splines (wheel hub) ②
     Wear/damage → Replace.
CHECKING THE FRONT BRAKE DISC
1. Check:
   • Brake disc
     - Gallling/damage → Replace.

2. Measure:
   • Brake disc deflection
     - Out of specification → Check the wheel runout.
     - If wheel runout is within the limits, replace the brake disc.

- Brake disc maximum deflection: 0.15 mm (0.006 in)
- Brake disc minimum thickness: 3 mm (0.12 in)

INSTALLING THE FRONT WHEEL HUB
1. Install:
   • Axle nut
     - 200 Nm (20.0 m • kg, 145 ft • lb)
   • Cotter pin ①

NOTE:
- Do not apply oil to the seat of the nut.
- Do not loosen the axle nut after torquing it. If the axle nut groove is not aligned with the cotter pin hole, align the groove with the hole by tightening the axle nut.

INSTALLING THE FRONT WHEEL
1. Install:
   • Wheel

NOTE:
- The arrow mark ① on the tire must point in the direction of rotation ① of the wheel.
2. Tighten:
- Nuts (wheel) ①

⚠️ WARNING
Tapered wheel nuts ① are used for both the front and rear wheels. Install each nut with its tapered side towards the wheel.
Removing the rear wheel

CHECKING THE REAR WHEEL
1. Check:
   • Wheel
     Refer to “CHECKING THE FRONT WHEEL”.
2. Measure:
   • Wheel runout
     Refer to “CHECKING THE FRONT WHEEL”.
     Over the specified limit → Replace.

   Wheel runout limit:
   Radial: 2.0 mm (0.08 in)
   Lateral: 2.0 mm (0.08 in)

3. Check:
   • Wheel balance
     Refer to “CHECKING THE FRONT WHEEL”.
     Out of balance → Adjust.

CHECKING THE REAR WHEEL HUB
1. Check:
   • Wheel hub ①
     Cracks/damage → Replace.
   • Splines (wheel hub) ②
     Wear/damage → Replace.

CHECKING THE REAR BRAKE DISC
1. Check:
   • Brake disc
     Galling/damage → Replace.
2. Measure:
   • Brake disc deflection
     Out of specification → Replace.

   Brake disc maximum deflection: 0.1 mm (0.004 in)

   ● Brake disc thickness ③
     Out of specification → Replace.

   Brake disc minimum thickness: 8 mm (0.31 in)
INSTALLING THE REAR WHEEL HUB
1. Install:
   ● Cotter pin
   Refer to “INSTALLING THE FRONT WHEEL HUB”.
2. Adjust:
   ● Rear brake lever and pedal free play
   Refer to “ADJUSTING THE REAR BRAKE LEVER AND PEDAL” in CHAPTER 3.

INSTALLING THE REAR WHEEL
1. Install:
   ● Wheel
   Refer to “INSTALLING THE FRONT WHEEL”.
2. Tighten:
   ● Nuts (wheel)
   Refer to “INSTALLING THE FRONT WHEEL”.

CAUTION:
Disc brake components rarely require disassembly. DO NOT:
- disassemble components unless absolutely necessary;
- use solvents on internal brake components;
- use spent brake fluid for cleaning; (use only clean brake fluid)
- allow brake fluid to come in contact with the eyes, as this may cause eye injury;
- splash brake fluid onto painted surfaces or plastic parts, as this may cause damage;
- disconnect any hydraulic connection, as this would require the entire brake system to be disassembled, drained, cleaned, properly filled and bled after reassembly.

REPLACING THE FRONT BRAKE PAD

NOTE: It is not necessary to disassemble the brake caliper and brake hose to replace the brake pads.

1. Measure:
- Brake pad wear limit
  Out of specification → Replace the brake pad as a set.

2. Install:
- Brake pads
- Brake pad spring

NOTE: Always install new brake pads, brake pad shim and brake pad spring as a set.
Installation steps:

- Connect a suitable hose ① tightly to the brake caliper bleed screw ②. Put the other end of this hose into an open container.
- Loosen the brake caliper bleed screw and, using a finger, push the caliper piston into the brake caliper.
- Tighten the brake caliper bleed screw.

<table>
<thead>
<tr>
<th>Brake caliper bleed screw:</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 Nm (0.6 m•kg, 4.3 ft•lb)</td>
</tr>
</tbody>
</table>

- Install new brake pads, new pad shims ③ and a new brake pad spring.
- Install the retaining bolts and brake caliper.

**NOTE:**
The arrow mark ③ on the pad shim must point in the direction of the disc rotation.

<table>
<thead>
<tr>
<th>Brake pad holding bolt:</th>

<tr>
<td>Brake caliper mounting bolt:</td>
</tr>
<tr>
<td>30 Nm (3.0 m•kg, 22 ft•lb)</td>
</tr>
</tbody>
</table>

3. Check:
- Brake fluid level
  Refer to “CHECKING THE BRAKE FLUID LEVEL” in CHAPTER 3.

4. Check:
- Brake lever operation
  Soft or spongy feeling → Bleed the front brake system.
  Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” in CHAPTER 3.
REPLACING THE REAR BRAKE PAD

NOTE: It is not necessary to disassemble the brake caliper and brake hose to replace the brake pads.

1. Measure:
   - Brake pad wear limit
     Out of specification → Replace the brake pad as a set.

   ![Brake pad wear limit: 1 mm (0.04 in)]

2. Install:
   - Brake pads
   - Brake pad spring

   NOTE: Always install new brake pads, brake pad shims, insulator and brake pad spring as a set.

   ****************************************************

   **Installation steps:**
   - Connect a suitable hose 1 tightly to the brake caliper bleed screw 2. Put the other end of this hose into an open container.
   - Loosen the brake caliper bleed screw and, using a finger, push the caliper piston into the brake caliper.
   - Tighten the brake caliper bleed screw.

   ![Brake caliper bleed screw: 6 Nm (0.6 m•kg, 4.3 ft•lb)]

   - Install new brake pads, new insulator, new pad shims and a new brake pad spring.
   - Install the retaining bolts and brake caliper.

   ![Brake pad holding bolt: 18 Nm (1.8 m•kg, 13 ft•lb)  
   Brake caliper mounting bolt: 40 Nm (4.0 m•kg, 29 ft•lb)]

   ****************************************************
3. Check:
   - Brake fluid level
     Refer to “CHECKING THE BRAKE FLUID LEVEL INSPECTION” in CHAPTER 3.

4. Check:
   - Brake lever or brake pedal operation
     Soft or spongy feeling → Bleed the rear brake system.
     Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” in CHAPTER 3.

CHECKING THE MASTER CYLINDER

1. Check:
   - Brake master cylinder ①
     Wear/scratches → Replace the brake master cylinder assembly.
   - Brake master cylinder body
     Cracks/damage → Replace.
   - Brake fluid delivery passage (brake master cylinder body)
     Blockage → Blow out with compressed air.

2. Check:
   - Brake master cylinder kit
     Scratches/wear/damage → Replace as a set.

3. Check:
   - Front brake master cylinder reservoir ①
   - Front brake master cylinder reservoir diaphragm ②
     Cracks/damage → Replace.

4. Check:
   - Rear brake fluid reservoir ①
   - Rear brake fluid reservoir diaphragm ②
     Cracks/damage → Replace.
CHAS FRONT AND REAR BRAKES

EB702060
ASSEMBLING THE FRONT BRAKE MASTER CYLINDER

⚠️ WARNING
- All internal brake components should be cleaned and lubricated with new brake fluid only before installation.

#### Recommended brake fluid:
DOT 4

- Whenever a master cylinder is disassembled, replace the piston seals and dust seals.

---

EB702060
ASSEMBLING THE REAR BRAKE MASTER CYLINDER

⚠️ WARNING
- All internal brake components should be cleaned and lubricated with new brake fluid only before installation.

#### Recommended brake fluid:
DOT 4

- Whenever a master cylinder is disassembled, replace the piston seals and dust seals.

1. Install:
   - Brake master cylinder kit
   - Nut ①
   - Joint ②

**NOTE:**
Turn the adjusting bolt ③ until the clearance ④ is within the specified limits when install the joint ②.

#### Clearance ④:
5 ~ 6 mm (0.20 ~ 0.24 in)

2. Tighten:
   - Nut ①
INSTALLING THE FRONT BRAKE MASTER CYLINDER

1. Install:
   - Brake master cylinder
   - \( \times 7 \text{ Nm (0.7 m} \cdot \text{kg, 5.1 ft} \cdot \text{lb)} \)

   **NOTE:**
   The “UP” mark on the brake master cylinder bracket should face up.

2. Install:
   - Copper washers
   - Brake hose
   - Union bolt
   - \( \times 27 \text{ Nm (2.7 m} \cdot \text{kg, 19 ft} \cdot \text{lb)} \)

   **NOTE:**
   - Tighten the union bolt while holding the brake hose as shown.
   - Turn the handlebar to the left and to the right to check that the brake hose does not touch other parts (throttle cable, wire harness, leads, etc.). Correct if necessary.

**WARNING**
Proper brake hose routing is essential to insure safe machine operation. Refer to “CABLE ROUTING”.

3. Fill:
   - Brake fluid reservoir

   **Recommended brake fluid:**
   DOT 4

   **CAUTION:**
   Brake fluid may damage painted surfaces or plastic parts. Always clean up spilled brake fluid immediately.

**WARNING**
- Use only the designated quality brake fluid: other brake fluids may deteriorate the rubber seals, causing leakage and poor brake performance.
- Refill with the same type of brake fluid: mixing brake fluids may result in a harmful chemical reaction and lead to poor brake performance.
- Be careful that water does not enter the brake master cylinder when refilling. Water will significantly lower the boiling point of the brake fluid and may result in vapor lock.

4. Air bleed:
- Brake system
  Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” in CHAPTER 3.

5. Check:
- Brake fluid level
  Brake fluid level is under the “LOWER” level line → Fill up.
  Refer to “CHECKING THE BRAKE FLUID LEVEL” in CHAPTER 3.

INSTALLING THE REAR BRAKE MASTER CYLINDER
1. Install:
- Copper washers ① New
- Brake hose ②
- Union bolt ③ \( \leq 30 \text{ Nm (3.0 m\cdot kg, 22 ft\cdot lb)} \)

**CAUTION:**
When installing the brake hose onto the brake master cylinder, make sure the brake pipe touches the projection ⑧ as shown.

**WARNING**
Proper brake hose routing is essential to insure safe machine operation. Refer to “CABLE ROUTING”.

2. Fill:
   - Brake fluid reservoir

   **Recommended brake fluid:**
   DOT 4

   **CAUTION:**
   Brake fluid may damage painted surfaces or plastic parts. Always clean up spilled brake fluid immediately.

   **WARNING**
   - Use only the designated quality brake fluid: other brake fluids may deteriorate the rubber seals, causing leakage and poor brake performance.
   - Refill with the same type of brake fluid: mixing brake fluids may result in a harmful chemical reaction and lead to poor brake performance.
   - Be careful that water does not enter the brake master cylinder when refilling. Water will significantly lower the boiling point of the brake fluid and may result in vapor lock.

3. Air bleed:
   - Brake system
   Refer to “BLEEDING THE HYDRAULIC BRAKE SYSTEM” in CHAPTER 3.

4. Check:
   - Brake fluid level
   Brake fluid level is under the “LOWER” level line → Fill up.
   Refer to “CHECKING THE BRAKE FLUID LEVEL” in CHAPTER 3.

Remove the parts in the order below.

For assembly, reverse the disassembly procedure.
DISASSEMBLING THE BRAKE CALIPER
1. Remove:
   - Brake caliper piston
   - Dust seal 1
   - Caliper piston seal 2

Removal steps:
- Blow compressed air into the hose joint opening 3 to force out the caliper piston from the brake caliper body.

⚠️ WARNING
- Never try to pry out the caliper piston.
- Cover the caliper piston with a rag. Be careful not to get injured when the piston is expelled from the master cylinder.

- Remove the caliper piston seals.

DISASSEMBLING THE REAR BRAKE CALIPER
1. Remove:
   - Brake caliper piston
   - Dust seals 1
   - Caliper piston seals 2

Removal steps:
- Secure the left side brake caliper piston with a peace of wood 3.
- Blow compressed air into the hose joint opening 5 to force out the caliper piston from the brake caliper body.

⚠️ WARNING
- Never try to pry out the caliper piston.
- Do not loose the bolt 3.

- Remove the caliper piston seals.
CHECKING THE FRONT AND REAR BRAKE CALIPER

Recommended brake component replacement schedule:

<table>
<thead>
<tr>
<th>Component</th>
<th>Replacement Schedule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brake pads</td>
<td>As required</td>
</tr>
<tr>
<td>Piston seal, dust seal</td>
<td>Every two years</td>

<tr>
<td>Brake fluid</td>
<td>Replace when brake are disassembled.</td>
</tr>
</tbody>
</table>

**WARNING**

All internal brake components should be cleaned in new brake fluid only. Do not use solvents as they will cause seals to swell and distort.

1. Check:
   - Brake caliper piston ①
     Scratches/rust/wear → Replace the brake caliper assembly.
   - Brake caliper cylinder ②
     Wear/scratches → Replace the brake caliper assembly.
   - Brake caliper body ③
     Cracks/damage → Replace.
   - Brake fluid delivery passage (brake caliper body)
     Blockage → Blow out with compressed air.

**WARNING**

Replace the caliper piston seal and dust seal whenever the brake caliper is disassembled.

A Front
B Rear
ASSEMBLING THE FRONT BRAKE CALIPER

**WARNING**

- All internal brake components should be cleaned and lubricated with new brake fluid only before installation.

**Recommended brake fluid:**

DOT 4

- Replace the caliper piston seal whenever a brake caliper is disassembled.

1. Install:
   - Caliper piston seal
   - Dust seal

2. Install:
   - Brake caliper piston

INSTALLING THE FRONT BRAKE CALIPER

1. Install:
   - Brake caliper assembly
   - Brake caliper mounting bolt
   - Brake hose
   - Copper washers
   - Union bolt

   **CAUTION:**
   When installing the brake hose on the brake caliper, make sure that the brake pipe touches the projection on the brake caliper.
Proper brake hose routing is essential to insure safe motorcycle operation. Refer to “CABLE ROUTING”.

2. Fill:
   - Brake reservoir

**Recommended brake fluid:**

| Recommended brake fluid: | DOT 4 |

**CAUTION:**

Brake fluid may damage painted surfaces or plastic parts. Always clean up spilled brake fluid immediately.

**WARNING**

- Use only the designated quality brake fluid: other brake fluids may deteriorate the rubber seals, causing leakage and poor brake performance.
- Refill with the same type of brake fluid: mixing brake fluids may result in a harmful chemical reaction and lead to poor brake performance.

**Note:**
- 20 Nm (2.0 m·kg, 14 ft·lb)
REMOVING THE REAR BRAKE SWITCH
1. Remove:
   - Rear brake switch ①

**NOTE:**
Push the fastener when removing the rear brake switch out of the rear brake lever holder.

CHECKING THE HANDLEBAR
1. Inspect:
   - Handlebar
     Bends/cracks/damage → Replace.

**WARNING**
Do not attempt to straighten a bent handlebar as this may dangerously weaken the handlebar.

INSTALLING THE HANDLEBAR
1. Install:
   - Handlebar
   - Handlebar holders

**NOTE:**
The upper handlebar holder should be installed with the punched mark ① forward ②.

**CAUTION:**
First tighten the bolts ③ on the front side of the handlebar holder, and then tighten the bolts ④ on the rear side.

INSTALLING THE REAR BRAKE LEVER
1. Install:
   - Handlebar switch ①
   - Rear brake lever
   - Lever bracket ②

**NOTE:**
Install the lever bracket as shown.

⑧ 66 mm (2.6 in)
INSTALLING THE MASTER CYLINDER ASSEMBLY

1. Install:
   - Throttle lever assembly
   - Master cylinder assembly

   **7 Nm (0.7 m•kg, 5.1 ft•lb)**

**NOTE:**
The “UP” mark on the master cylinder bracket should face up.
STEERING STEM

Order | Job name/Part name | Q'ty | Remarks
--- | --- | --- | ---
1 | Lock washer | 1 | Remove the parts in the order below. Refer to "HANDLEBAR".
2 | Cable guide | 1 | Refer to "SEAT, CARRIERS, FENDERS AND FUEL TANK" in CHAPTER 3.
3 | Steering stem bushing | 2 | Refer to "INSTALLING THE CABLE GUIDE".
4 | Collar | 2 | Disconnect.
5 | Oil seal | 2 |
6 | Tie rod end nut | 2 |
7 | Tie rod | 2 |
8 | Steering stem nut | 1 |
9 | Pitman arm | 1 |
10 | Steering stem | 1 |

**CHASSTEERING SYSTEM**

- 23 Nm (2.3 m·kg, 17 ft·lb)
- 65 Nm (6.5 m·kg, 47 ft·lb)
- 180 Nm (18.0 m·kg, 130 ft·lb)
- 25 Nm (2.5 m·kg, 18 ft·lb)
REMOVING THE BEARING RETAINER
1. Remove:
   - Bearing retainer (steering stem)

   Damper rod holder (30 mm):
   ▶ P/N. YM-01327, 90890-01327

CHECKING THE STEERING STEM
1. Inspect:
   - Steering stem
     Bends → Replace.

   ▶ WARNING
   Do not attempt to straighten a bent stem; this may dangerously weaken the stem.

2. Check:
   - Oil seals
   - Steering stem bushings
     Wear/damage → Replace.

INSTALLING THE BEARING RETAINER
1. Install:
   - Bearing retainer (steering stem)

   ▶ 40 Nm (4.0 m·kg, 29 ft·lb)

   Damper rod holder (30 mm):
   ▶ P/N. YM-01327, 90890-01327

INSTALLING THE STEERING STEM
1. Install
   - Steering stem

   NOTE: The steering stem should be installed with the paint mark ① in the forward ③ position.
INSTALLING THE CABLE GUIDE

1. Install
   - Cable guide
   - Lock washer

2. Bend the lock washer tab along a flat side of the bolt.

**NOTE:**
Pass the cables and hoses through the cable guide. Refer to “CABLE ROUTING” in CHAPTER 2.
# TIE ROD AND STEERING KNUCKLE

REMOVING THE STEERING KNUCKLE
1. Remove:
   - Steering knuckle ①

NOTE: Use a general puller to separate the ball joint ② and steering knuckle.

CHECKING THE TIE ROD
1. Check:
   - Tie rod free play and movement
     Free play → Replace the tie rod end.
     Turns roughly → Replace the tie rod end.
   2. Check:
     - Tie rod
     - Bends/damage → Replace.

CHECKING THE STEERING KNUCKLE
1. Check:
   - Steering knuckle
     Damage/pitting → Replace.

2. Check:
   - Front wheel bearings
     Bearings allow play in the wheel hubs or the wheel turns roughly → Replace.
   - Oil seals
     Damage → Replace.

******************************************************************************
Replacement steps:
- Clean the outside of the steering knuckle.
- Remove the oil seals ①.
- Drive out the bearings ②.

⚠️ WARNING
Eye protection is recommended when using striking tools.

- Remove the spacer ③.
- Apply lithium base grease to the bearings and oil seals.
- Install the spacer to the steering knuckle.
Install the new bearings.

NOTE: __________________________
Install the outside bearing first.

CAUTION: __________________________
Do not strike the center race or balls of the bearing. Contact should be made only with the outer race.

Install a new oil seal.

NOTE: __________________________
When installing the oil seals, the “seal side” of the oil seal faces out.

CHECKING THE BALL JOINT
1. Check:
   - Ball joint
     Damage/pitting → Replace the front arm.
     Free play → Replace the front arm.
     Turns roughly → Replace the front arm.

CHECKING THE TIE ROD
1. Install:
   - Tie rods (left and right)
     25 Nm (2.5 m • kg, 18 ft • lb)

   NOTE: __________________________
The tie rod which must be installed on the outside has grooves ①.

2. Adjust:
   - Toe-in
     Refer to “ADJUSTING THE TOE-IN” in CHAPTER 3.
Order | Job name/Part name | Q'ty | Remarks
--- | --- | --- | ---
1 | Removing the front arms and front shock absorber  
   Engine skid plate (front)  
   Front fender  
   Front wheel/brake disc  
1 | Air duct | 1 | Remove the parts in the order below.
2 | Brake disc guard | 1 | Refer to “SEAT, CARRIERS, FENDERS AND FUEL TANK” in CHAPTER 3.
3 | Front protector | 1 | Refer to “FRONT AND REAR WHEELS”.

New

45 Nm (4.5 m · kg, 32 ft · lb)

7 Nm (0.7 m · kg, 5.1 ft · lb)

45 Nm (4.5 m · kg, 32 ft · lb)

25 Nm (2.5 m · kg, 18 ft · lb)

48 Nm (4.8 m · kg, 35 ft · lb)
### FRONT ARMS AND FRONT SHOCK ABSORBER

**Order** | **Job name/Part name** | **Q'ty** | **Remarks**
--- | --- | --- | ---
4 | Bolt/washer/nut | 1/1/1 | Refer to “REMOVING THE FRONT ARMS” and “INSTALLING THE FRONT ARMS AND FRONT SHOCK ABSORBER”.
5 | Nut | 1 |  
6 | Bolt/nut | 2/2 |  
7 | Front arm (lower)/bushing | 1/2 |  
8 | Nut/bolt | 2/2 |  
9 | Front shock absorber/collar | 1/1 |  
10 | Bolt/nut | 2/2 |  
11 | Front arm (upper)/bushing | 1/2 | For installation, reverse the removal procedure.  

**Notes:**
- New parts are marked with a green color.
- Nut/bolt torques:
  - 45 Nm (4.5 m·kg, 32 ft·lb)
  - 48 Nm (4.8 m·kg, 35 ft·lb)
  - 25 Nm (2.5 m·kg, 18 ft·lb)
  - 7 Nm (0.7 m·kg, 5.1 ft·lb)

**Order Job name/Part name**
- New parts are marked with a green color.

---

**Diagram:**
- 45 Nm (4.5 m·kg, 32 ft·lb)
- 48 Nm (4.8 m·kg, 35 ft·lb)
- 25 Nm (2.5 m·kg, 18 ft·lb)
- 7 Nm (0.7 m·kg, 5.1 ft·lb)
REMOVING THE FRONT ARMS
1. Check:
   • Front arm free play

*****************************************************

Checking steps:
   • Check the front arm side play [A] by moving it from side to side.
     If side play is noticeable, check the bushings.
   • Check the front arm vertical movement [B] by moving it up and down.
     If the vertical movement is tight or rough, or if there is binding, check the bushings.

*****************************************************

2. Remove:
   • Front arms

CHECKING THE FRONT ARM
1. Check:
   • Front arms ①
     Bends/damage → Replace.
2. Check:
   • Bushings ②
     Wear/damage → Replace.

CHECKING THE FRONT SHOCK ABSORBER
1. Check:
   • Shock absorber rod
     Bends/damage → Replace the shock absorber assembly.
   • Shock absorber assembly
     Oil leaks → Replace the shock absorber assembly.
   • Spring
     Fatigue → Replace the shock absorber assembly.
     Move the spring up and down.
INSTALLING THE FRONT ARMS AND FRONT SHOCK ABSORBER

1. Install:
   - Front arms
   - Front shock absorber

******************************************************************************

Installation steps:
- Install the front arm (upper) ① and front arm (lower) ②.

NOTE:
- Lubricate the bolts ③ with lithium soap base grease.
- Be sure to position the bolts ③ so that the bolt head faces outward.
- Temporarily tighten the nuts ④.

- Install the front shock absorber ⑤.

<table>
<thead>
<tr>
<th>Nut ⑥:</th>
<th>45 Nm (4.5 m • kg, 32 ft • lb)</th>
</tr>
</thead>
</table>

- Install the ball joints.

<table>
<thead>
<tr>
<th>Nut ⑦:</th>
<th>25 Nm (2.5 m • kg, 18 ft • lb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nut ⑧:</td>
<td>48 Nm (4.8 m • kg, 35 ft • lb)</td>
</tr>
</tbody>
</table>

- Install the new cotter pins.
- Tighten the nuts ④.

NOTE: Before tightening the nuts ④, adjust the length ⑧ to 324 mm (12.8 in).

| Nut ④: | 45 Nm (4.5 m • kg, 32 ft • lb) |

******************************************************************************
### Removing the rear knuckle and stabilizer

Remove the parts in the order below.

Refer to "REAR WHEELS AND BRAKE DISC".

- **48 Nm (4.8 m·kg, 35 ft·lb)**
- **45 Nm (4.5 m·kg, 32 ft·lb)**
- **48 Nm (4.8 m·kg, 35 ft·lb)**
CHECKING THE REAR KNUCKLE
1. Check:
   - Rear knuckle
     Damage/pitting → Replace.

2. Check:
   - Rear wheel bearings
     Bearings allow play in the wheel hubs or the wheel turns roughly → Replace.
   - Oil seals
     Damage → Replace.

Replacement steps:
- Clean the outside of the rear knuckle.
- Remove the oil seals ①.
- Drive out the bearings ②.

**WARNING**
Eye protection is recommended when using striking tools.

- Remove the spacer ③.
- Apply lithium base grease to the bearings and oil seals.
- Install the spacer to the rear knuckle.
- Install the new bearings.

**NOTE:**
Install the outside bearing first.

**CAUTION:**
Do not strike the center race or balls of the bearing. Contact should be made only with the outer race.

- Install a new oil seal.

**NOTE:**
When installing the oil seals, the “seal side” of the oil seal faces out.

CHECKING THE STABILIZER
1. Check:
   - Stabilizer
     Bends/cracks/damage → Replace.
Removing the rear arms and rear shock absorber

Remove the parts in the order below.

<table>
<thead>
<tr>
<th>Order</th>
<th>Job name/Part name</th>
<th>Q'ty</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Nut/bolt</td>

</tbody>
</table>
CHECKING THE REAR ARM
1. Check:
   - Rear arms ①
     Bends/damage → Replace.
2. Check:
   - Bushings ②
     Wear/damage → Replace.

CHECKING THE REAR SHOCK ABSORBER
1. Check:
   - Shock absorber rod
     Bends/damage → Replace the shock absorber assembly.
   - Shock absorber assembly
     Oil leaks → Replace the shock absorber assembly.
   - Spring
     Move the spring up and down.
     Fatigue → Replace the shock absorber assembly.

CHECKING THE REAR ARMS AND REAR SHOCK ABSORBER
1. Install:
   - Rear arms
   - Rear shock absorber

Installation steps:
- Install the rear arm (upper) ① and rear arm (lower) ②.

NOTE:
- Lubricate the bolts ③ with lithium soap base grease.
- Be sure to position the bolts ③ so that the bolt head faces outward.
- Temporarily tighten the nuts ④.
Install the rear shock absorber ⑤.

| Nut ⑥: | 45 Nm (4.5 m • kg, 32 ft • lb) |

Install the rear knuckle.

| Nut ⑦: | 45 Nm (4.5 m • kg, 32 ft • lb) |

Tighten the nuts ④.

**NOTE:**
Before tightening the nuts ④, adjust the length ⑧ to 334 mm (13.1 in).

| Nut ④: | 45 Nm (4.5 m • kg, 32 ft • lb) |

21. Rear brake light switch
22. Thermo switch 2
23. Fan
24. Ignition coil
CHECKING THE SWITCH

CHECKING THE SWITCH

Use a pocket tester to check the terminals for continuity. If the continuity is faulty at any point, replace the switch.

**NOTE:**
- Set the pocket tester to “0” before starting the test.
- The pocket tester should be set to the “Ω × 1” range when testing the switch for continuity.
- Turn the switch on and off a few times when checking it.

Pocket tester:
P/N. YU-03112, 90890-03112

CHECKING A SWITCH SHOWN IN THE MANUAL

The terminal connections for switches (main switch, handlebar switch, engine stop switch, light switch, etc.) are shown in a chart similar to the one on the left.

This chart shows the switch positions in the column and the switch lead colors in the top row.

For each switch position, “□——□” indicates the terminals with continuity.

The example chart shows that:
1. There is continuity between the “Red, Brown/Blue, and Brown” leads when the switch is set to “ON”.

CHECKING THE SWITCH CONTINUITY

Refer to “CHECKING THE SWITCH” and check for continuity between lead terminals.

Poor connection, no continuity → Correct or replace.

* The coupler locations are circled.
① Light switch
② Engine stop switch
③ Start switch
④ On-command four-wheel drive switch and differential gear lock switch
⑤ Main switch
⑥ Rear brake light switch
⑦ Front brake light switch
⑧ Rear brake switch
⑨ Horn switch (for Europe and Oceania)
⑩ Gear position switch
⑪ Reverse switch
⑫ Fuse
CHECKING THE BULBS AND BULB SOCKETS

Check each bulb and bulb socket for damage or wear, proper connections, and also for continuity between the terminals.

Damage/wear → Repair or replace the bulb, bulb socket or both.
Improperly connected → Properly connect.
Incorrect continuity reading → Repair or replace the bulb, bulb socket or both.

TYPES OF BULBS

The bulbs used on this motorcycle are shown in the illustration on the left.

- Bulbs A and B are used for headlights and usually use a bulb holder which must be detached before removing the bulb. The majority of these bulbs can be removed from their respective socket by turning them counterclockwise.
- Bulb C is used for turn signal and brake/tail lights and can be removed from the socket by pushing and turning the bulb counterclockwise.
- Bulbs D and E are used for meter and indicator lights and can be removed from their respective socket by carefully pulling them out.

CHECKING THE CONDITION OF THE BULBS

The following procedure applies to all of the bulbs.

1. Remove:
   - Bulb
CHECKING THE BULBS AND BULB SOCKETS

**WARNING**
Since the headlight bulb gets extremely hot, keep flammable products and your hands away from the bulb until it has cooled down.

**CAUTION:**
- Be sure to hold the socket firmly when removing the bulb. Never pull the lead, otherwise it may be pulled out of the terminal in the coupler.
- Avoid touching the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the life of the bulb and the luminous flux will be adversely affected. If the headlight bulb gets soiled, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

2.Check:
- Bulb (for continuity)  
  (with the pocket tester)  
  No continuity → Replace.

---

**NOTE:**
Before checking for continuity, set the pocket tester to “0” and to the “Ω × 1” range.

---

<table>

<tr>
<td>P/N. YU-03112, 90890-03112</td>
</tr>
</tbody>
</table>

---

*[Diagram of bulb and socket]*

---

| a. | Connect the tester positive probe to terminal ① and the tester negative probe to terminal ②, and check the continuity. |
| b. | Connect the tester positive probe to terminal ① and the tester negative probe to terminal ③, and check the continuity. |
| c. | If either of the readings indicate no continuity, replace the bulb. |

---
CHECKING THE CONDITION OF THE BULB SOCKETS
The following procedure applies to all of the bulb sockets.
1. Check:
   • Bulb socket (for continuity)
     (with the pocket tester)
   No continuity → Replace.

NOTE: Check each bulb socket for continuity in the same manner as described in the bulb section; however, note the following.

******************************************************************************
  a. Install a good bulb into the bulb socket.
  b. Connect the pocket tester probes to the respective leads of the bulb socket.
  c. Check the bulb socket for continuity. If any of the readings indicate no continuity, replace the bulb socket.
******************************************************************************

CHECKING THE LEDs
The following procedure applies to all of the LEDs.
1. Check:
   • LED (for proper operation)

******************************************************************************
  a. Disconnect the meter assembly coupler (meter assembly side).
  b. Connect two jumper leads from the battery terminals to the respective coupler terminals as shown.

WARNING
• A wire that is used as a jumper lead must have at least the same capacity of the battery lead, otherwise the jumper lead may burn.
• This check is likely to produce sparks, therefore make sure that no flammable gas or fluid is in the vicinity.

  c. When the jumper leads are connected to the terminals the respective LED should illuminate. Does not light → Replace the meter assembly.
******************************************************************************
TROUBLESHOOTING

IF THE IGNITION SYSTEM FAILS TO OPERATE (NO SPARK OR INTERMITTENT SPARK):

Procedure
Check:
1. Fuse (main, ignition)
2. Battery
3. Spark plug
4. Ignition spark gap
5. Spark plug cap resistance
6. Ignition coil resistance
7. Engine stop switch
8. Main switch
9. Pickup coil resistance
10. Charging/rotor rotation direction detection coil resistance
11. Wiring connection (the entire ignition system)

NOTE:
- Remove the following part(s) before troubleshooting:
  1) Seat
  2) Fuel tank side panels
  3) Front carrier
  4) Front fender
- Use the following special tool(s) for troubleshooting.
  - Dynamic spark tester: P/N. YM-34487
  - Ignition checker: P/N. 90890-06754
  - Pocket tester: P/N. YU-03112, 90890-03112

---

1. Fuse (main, ignition)

Refer to "CHECKING THE SWITCH".

CONTINUITY

2. Battery

- Check the battery condition.
  Refer to "CHECKING THE BATTERY" in CHAPTER 3.

Open-circuit voltage:
12.8 V or more at 20 °C (68 °F)

CORRECT

3. Spark plug

- Check the spark plug condition.
- Check the spark plug type.
- Check the spark plug gap.
  Refer to "CHECKING THE SPARK PLUG" in CHAPTER 3.

INCORRECT

NO CONTINUITY

Replace the fuse.

---

_STANDARD SPARK PLUG:_
_DPR8EA-9/NGK_
• Disconnect the spark plug cap from the spark plug.
• Connect the dynamic spark tester ① as shown.
② Spark plug cap
③ Spark plug
• Turn the main switch to “ON”.
• Check the ignition spark gap.
• Crank the engine by pushing the starter switch, and increase the spark gap until a misfiring occurs.

Minimum spark gap: 6.0 mm (0.24 in)

OUT OF SPECIFICATION OR NO SPARK

The ignition system is not faulty.

5. Spark plug cap resistance
• Remove the spark plug cap.
• Connect the pocket tester (Ω × 1k) to the spark plug cap.

• Check that the spark plug cap has the specified resistance.

Spark plug cap resistance: 10 kΩ at 20 °C (68 °F)

MEETS SPECIFICATION

OUT OF SPECIFICATION

Replace the spark plug cap.
6. Ignition coil resistance

- Disconnect the ignition coil connector from the wire harness.
- Connect the pocket tester (Ω × 1) to the ignition coil.

**Tester (+) lead → Orange lead terminal**
**Tester (−) lead → Ignition coil base**

- Check that the primary coil has the specified resistance.

<table>
<thead>
<tr>
<th>Primary coil resistance:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.18 ~ 0.28 Ω at 20 °C (68 °F)</td>
</tr>
</tbody>
</table>

**OUT OF SPECIFICATION**

- Replace the ignition coil.

7. Engine stop switch

Refer to “CHECKING THE SWITCH”.

**INCORRECT**

- Replace the handlebar switch (left).
8. Main switch
Refer to “CHECKING THE SWITCH”.

9. Pickup coil resistance
- Disconnect the AC magneto coupler from the wire harness.
- Connect the pocket tester \((\Omega \times 100)\) to the pickup coil terminal.

\[
\text{Tester (+) lead } \rightarrow \text{White/Red terminal} \quad ① \\
\text{Tester (–) lead } \rightarrow \text{White/Green terminal} \quad ②
\]

- Check the pickup coil for the specified resistance.

Pickup coil resistance:
459 ~ 561 \(\Omega\) at 20 °C (68 °F)
(White/Red – White/Green)

10. Charging/rotor rotation direction detection coil resistance
- Disconnect the AC magneto coupler from the wire harness.
- Connect the pocket tester \((\Omega \times 100)\) to the charging/rotor rotation direction detection coil terminal.

\[
\text{Tester (+) lead } \rightarrow \text{Red terminal} \quad ① \\
\text{Tester (–) lead } \rightarrow \text{White/Blue terminal} \quad ②
\]

- Check the charging/rotor rotation direction detection coil for the specified resistance.

Rotor rotation direction sensing coil resistance:
0.063 ~ 0.077 \(\Omega\) at 20 °C (68 °F)
(Red – White/Blue)
11. Wiring connection

- Check the connections of the entire ignition system.
  Refer to “CIRCUIT DIAGRAM”.

**POOR CONNECTION**

**CORRECT**

Replace the CDI unit.

**PROPER CONNECTION**

Properly connect the ignition system.
STARTING CIRCUIT OPERATION

The starting circuit on this model consists of the starter motor, starter relay, rear brake switch, rear brake switch CDI unit and gear position switch. If the main switch is on and the engine stop switch is in the RUN position, the starter motor can be operated only if:

- The transmission is in neutral (the neutral switch is closed).
- The transmission is in park (the rear brake switch is closed).
- The rear brake lever is pulled (the rear brake switch is closed).

1. Main fuse  
2. Battery  
3. Starter relay  
4. Starter motor  
5. Start switch  
6. Ignition fuse  
7. Engine stop switch  
8. CDI unit  
9. Rear brake switch  
10. Gear position switch

A. TO MAIN SWITCH  
B. FROM MAIN SWITCH
EB803020

TROUBLESHOOTING

IF THE STARTER MOTOR FAILS TO OPERATE:

Procedure

Check:
1. Fuse (main, ignition)
2. Battery
3. Starter motor
4. Starter relay
5. Main switch
6. Engine stop switch
7. Gear position switch
8. Rear brake switch
9. Start switch
10. Diode
11. Wiring connection (the entire starting system)

NOTE:
- Remove the following part(s) before troubleshooting:
  1) Seat
  2) Fuel tank side panels
  3) Fuel tank
  4) Air cleaner case
  5) Front carrier
  6) Front fender panel
- Use the following special tool(s) for troubleshooting.

Pocket tester:
P/N. YU-03112, 90890-03112

EB802011

1. Fuse (main, ignition)
   Refer to “CHECKING THE SWITCH”.

   NO CONTINUITY

   CONTINUITY

   Replace the fuse.

EB802012

2. Battery
   - Check the battery condition.
   Refer to “CHECKING THE BATTERY” in CHAPTER 3.

   Open-circuit voltage:
   12.8 V or more at 20 °C (68 °F)

   INCORRECT

   *CORRECT

   - Clean the battery terminals.
   - Recharge or replace the battery.
3. Starter motor

- Connect the battery positive terminal ① and starter motor cable ② using a jumper lead ③.*
- Check the operation of the starter motor.

*WARNING*

- A wire that is used as a jumper lead must have the equivalent capacity or more as that of the battery lead, otherwise the jumper lead may burn.
- This check is likely to produce sparks, so be sure that no flammable gas or fluid is in the vicinity.

**DOES NOT TURN**

Repair or replace the starter motor.

4. Starter relay

- Remove the starter relay from the wire harness.
- Connect the pocket tester (Ω × 1) and the battery (12 V) to the starter relay terminals.

- Battery (+) terminal → Blue/White terminal ①
- Battery (−) terminal → Blue/Black terminal ②
- Tester (+) lead → Red terminal ③
- Tester (−) lead → Black terminal ④

- Check the starter relay for continuity.

**NO CONTINUITY**

Replace the starter relay.
5. Main switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the main switch.

CORRECT
Replace the handlebar switch (right).

6. Engine stop switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the gear position switch.

CORRECT
Replace the rear brake switch.

7. Gear position switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the rear brake switch.

8. Rear brake switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the rear brake switch.
9. Start switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the handlebar switch (left).

CORRECT

10. Diode
- Remove the diode from the coupler.
- Connect the pocket tester (Ω × 1) to the diode terminals as shown.
- Check the diode for continuity as follows.

<table>
<thead>
<tr>
<th>Tester positive probe</th>
<th>Tester negative probe</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blue/Red 1</td>
<td>Blue/Red 1</td>
<td></td>
</tr>
<tr>
<td>Black/Yellow 2</td>
<td>Black/Yellow 2</td>
<td></td>
</tr>
</tbody>
</table>

NOTE: When you switch the tester’s positive and negative probes, the readings in the left chart will be reversed.

INCORRECT
Replace the diode.

CORRECT

11. Wiring connection
- Check the connections of the entire starting system.
Refer to “CIRCUIT DIAGRAM”.

POOR CONNECTION
Properly connect the starting system.
STARTER MOTOR

### Removing the starter motor
- **1** Starter motor lead
- **2** Starter motor/O-ring

</table>
CHECKING THE STARTER MOTOR

1. Inspect:
   - Commutator
     Dirty → Clean it with #600 grit sandpaper.

2. Measure:
   - Commutator diameter (a)
     Out of specification → Replace the starter motor.

   **Outside diameter:**
   - 28 mm (1.10 in)
   - <Wear limit:>
   - 27 mm (1.06 in)

3. Measure:
   - Mica undercut (b)
     Out of specification → Scrape the mica using a hacksaw blade.

   **Mica undercut:**
   - 0.7 mm (0.03 in)

   **NOTE:**
   Scrape the mica to the proper measurement using a hacksaw blade which has been grounded to fit the commutator.

4. Inspect:
   - Armature coil (insulation/continuity)
     Defects → Replace the starter motor.

   **Armature coil resistance:**
   - Continuity check (1):
     0.025 ~ 0.035 Ω at 20 °C (68 °F)
   - Insulation check (2):
     More than 1 MΩ at 20 °C (68 °F)

   • If the resistance is incorrect, replace the starter motor.
5. Measure:
- Brush length \( \textcircled{a} \) (each)
  Out of specification \( \rightarrow \) Replace the brush.

\[
\begin{align*}
\text{Brush length:} & \quad 12.5 \text{ mm (0.49 in)} \\
\text{<Wear limit:>} & \quad 5 \text{ mm (0.20 in)}
\end{align*}
\]

6. Measure:
- Brush spring force
  Fatigue/out of specification \( \rightarrow \) Replace as a set.

\[
\begin{align*}
\text{Brush spring force:} & \quad 7.65 \sim 10.01 \text{ Nm} \\
& \quad (780 \sim 1,020 \text{ g, 27.5} \sim 36.0 \text{ oz})
\end{align*}
\]

7. Inspect:
- Oil seal
- Bushing
- O-rings
  Wear/damage \( \rightarrow \) Replace.

### ASSEMBLING THE STARTER MOTOR

1. Install:
- Brush seat 1 \( \textcircled{1} \)

**NOTE:**
Align the projection \( \textcircled{a} \) on the brush seat 1 with the slot \( \textcircled{b} \) on the yoke.

2. Install:
- Yoke
- Brackets

**NOTE:**
Align the match marks \( \textcircled{a} \) on the yoke with the match marks \( \textcircled{b} \) on the brackets.
TROUBLESHOOTING

IF THE BATTERY IS NOT CHARGED:

Procedure
Check:
1. Fuse (main)
2. Battery
3. Charging voltage

4. Charging coil resistance
5. Wiring connections (the entire charging system)

NOTE:
- Remove the following part(s) before troubleshooting:
  1) Seat
  2) Fuel tank side panels
- Use the following special tool(s) for troubleshooting.

Inductive tachometer:
P/N. YU-8036-A
Engine tachometer:
P/N. 90890-03113
Pocket tester:
P/N. YU-03112, 90890-03112

EB802011

1. Fuse (main)
Refer to "CHECKING THE SWITCH".

CONTINUITY

NO CONTINUITY
Replace the fuse.

INCORRECT

EB802012

2. Battery
Check the battery condition.
Refer to "CHECKING THE BATTERY" in CHAPTER 3.

Open-circuit voltage:
12.8 V or more at 20 °C (68 °F)

CORRECT

EB804011

3. Charging voltage
Connect the engine tachometer to the spark plug lead #1.
Connect the pocket tester (DC 20 V) to the battery.

Tester (+) lead → Battery (+) terminal
Tester (–) lead → Battery (–) terminal
- Start the engine and accelerate to about 3,000 r/min.

**Charging voltage:**
14 V at 1,000 r/min

**NOTE:**
Use a fully charged battery.

---

**MEETS SPECIFICATION**

*The charging circuit is not faulty.*

---

4. Charging coil resistance

- Disconnect the AC magneto coupler from the wire harness.
- Connect the pocket tester ($\Omega \times 1$) to the charging coils.

<table>
<thead>
<tr>
<th>Tester (+) lead → White terminal 1</th>
<th>Tester (-) lead → White terminal 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tester (+) lead → White terminal 1</td>
<td>Tester (-) lead → White terminal 3</td>
</tr>
</tbody>
</table>

- Measure the stator coil resistance.

**Charging coil resistance:**
0.32 ~ 0.43 $\Omega$ at 20 °C (68 °F)

---

**MEETS SPECIFICATION**

**OUT OF SPECIFICATION**

Replace the pickup coil/stator assembly.

---

5. Wiring connections

- Check the connections of the entire charging system.
- Refer to “CIRCUIT DIAGRAM”.

**CORRECT**

Properly connect the charging system.

---

Replace the rectifier/regulator.
TROUBLESHOOTING

IF THE HEADLIGHT AND/OR TAILLIGHT FAIL TO COME ON:

Procedure
Check:
1. Fuse (main, headlight)
2. Battery
3. Main switch
4. Light switch
5. Wiring connections
   (the entire lighting system)

NOTE:
- Remove the following part(s) before troubleshooting:
  1) Seat
  2) Front carrier
  3) Front fender panel
- Use the following special tool(s) for troubleshooting.

Pocket tester:
P/N. YU-03112, 90890-03112

---

1. Fuse (main, headlight)
   Refer to “CHECKING THE SWITCH”.

   ![Diagram of fuse test]

   NO CONTINUITY

   Replace the fuse.

   ![Diagram of fuse test result]

   CONTINUITY

   ![Diagram of fuse test result]

---

2. Battery
   - Check the battery condition.
     Refer to “CHECKING THE BATTERY” in CHAPTER 3.

   Open-circuit voltage:
   12.8 V or more at 20 °C (68 °F)

   ![Diagram of battery test]

   INCORRECT

   - Clean the battery terminals.
   - Recharge or replace the battery.

   ![Diagram of battery test result]

---

* CORRECT
3. Main switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the main switch.

CORRECT

4. Light switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Light switch is faulty, replace the handlebar switch (left).

CORRECT

5. Wiring connection

POOR CONNECTION
Properly connect the lighting system.

* Check the connections of the entire lighting system.
Refer to “WIRING DIAGRAM”.

CORRECT

Check the condition of each of the lighting system’s circuits.
Refer to “CHECKING THE LIGHTING SYSTEM”.

EB805013
CHECKING THE LIGHTING SYSTEM

1. If the headlights fail to come on:

1. Bulb and bulb socket
   - Check the bulb and bulb socket for continuity.

<table>
<thead>
<tr>
<th>CONTINUITY</th>
</tr>
</thead>
</table>

   NO CONTINUITY
   Replace the bulb and/or bulb socket.

2. Voltage
   - Connect the pocket tester (DC 20 V) to the headlight couplers.

   ![Diagram showing tester connections]

   **Tester (+) lead →**
   **Green terminal 1 or Yellow terminal 2**
   **Tester (−) lead →** **Black terminal 3**

   A: When the lights switch is on “LO”.
   B: When the lights switch is on “HI”.

   ![Diagram showing voltage checks]

   - Turn the main switch to “ON”.
   - Turn the lights switch to “LO” or “HI”.
   - Check the voltage (12 V) of the “Green” and “Yellow” leads on the bulb socket connector.

   MEETS SPECIFICATION
   This circuit is not faulty.

OUT OF SPECIFICATION
The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
2. If the taillight fails to come on:

1. Bulb and bulb socket
   - Check the bulb and bulb socket for continuity.

   **CONTINUITY**

   **NO CONTINUITY**
   - Replace the bulb and/or bulb socket.

2. Voltage
   - Connect the pocket tester (20 V) to the bulb socket coupler.

   **Tester (+) lead → Blue lead ①**
   **Tester (−) lead → Black lead ②**

   **OUT OF SPECIFICATION**
   - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.

- Turn the main switch to “ON”.
- Turn the lights switch to “LO” or “HI”.
- Check the voltage (12 V) of the “Blue” lead on the bulb socket connector.

**MEETS SPECIFICATION**
- This circuit is not faulty.

EB806010 TROUBLESHOOTING

IF THE BRAKE LIGHT AND/OR INDICATOR LIGHT FAILS TO COME ON:
IF THE HORN FAILS TO SOUND:

Procedure
Check:
1. Fuse (main, ignition, signaling system)
2. Battery
3. Main switch
4. Wiring connections
   (the entire signal system)

NOTE:
- Remove the following part(s) before troubleshooting:
  1) Seat
  2) Fuel tank
  3) Air cleaner case
  4) Front carrier
  5) Front fender panel
- Use the following special tool(s) for troubleshooting.

Pocket tester:
P/N. YU-03112, 90890-03112

1. Fuse (main, ignition, signaling system)
Refer to “CHECKING THE SWITCH”.

CONTINUITY

NO CONTINUITY
Replace the fuse.

2. Battery
- Check the battery condition.
  Refer to “CHECKING THE BATTERY” in CHAPTER 3.

Open-circuit voltage:
12.8 V or more at 20 °C (68 °F)

CORRECT

INCORRECT
- Clean the battery terminals.
- Recharge or replace the battery.
3. Main switch
Refer to “CHECKING THE SWITCH”.

INCORRECT
Replace the main switch.

CORRECT

4. Wiring connections
- Check the connections of the entire signal system.
  Refer to “CIRCUIT DIAGRAM”.

POOR CONNECTION
Properly connect the signal system.

CORRECT

Check the condition of each of the signal system’s circuits.
Refer to “CHECKING THE SIGNAL SYSTEM”.

EB8006011
CHECKING THE SIGNAL SYSTEM

1. If the brake light fails to come on:

1. Bulb and bulb socket
   - Check the bulb and bulb socket for continuity.
   - NO CONTINUITY
     - Replace the bulb and/or bulb socket.
   - CONTINUITY

2. Brake light switches
   - Refer to “CHECKING THE SWITCH”.
   - NO CONTINUITY
     - Replace the brake light switch.
   - CONTINUITY

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket connector.
   - Tester (+) lead → Yellow terminal ①
   - Tester (−) lead → Black terminal ②
   - OUT OF SPECIFICATION
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
   - MEETS SPECIFICATION
     - This circuit is not faulty.
2. If the neutral indicator light fails to come on:

1. Neutral indicator light LED
   - Check the LED of the neutral indicator light. Refer to “CHECKING THE LEDs”.
   - **NO CONTINUITY**
     - Replace the meter assembly.
   - **CONTINUITY**

2. Gear position switch
   - Refer to “CHECKING THE SWITCH”.
   - **NO CONTINUITY**
     - Replace the gear position switch.
   - **CONTINUITY**

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket coupler.
     - **Tester (+) lead → Red/White terminal ①**
     - **Tester (−) lead → Sky blue terminal ②**
   - **OUT OF SPECIFICATION**
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
   - **MEETS SPECIFICATION**
     - This circuit is not faulty.
3. If the park indicator light fails to come on:

1. Park indicator light LED
   - Check the LED of the park indicator light. Refer to “CHECKING THE LEDs”.
     - NO CONTINUITY
       - Replace the meter assembly.
     - CONTINUITY

2. Gear position switch
   - Refer to “CHECKING THE SWITCH”.
     - NO CONTINUITY
       - Replace the gear position switch.
     - CONTINUITY

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket coupler.
     - Tester (+) lead → Red/White terminal ①
     - Tester (−) lead → Blue/Red terminal ②
     - OUT OF SPECIFICATION
       - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
     - MEETS SPECIFICATION
       - This circuit is not faulty.
     - TURN THE MAIN SWITCH TO “ON”.
     - CHECK THE VOLTAGE (12 V).
4. If the high-range indicator light fails to come on:

1. High-range indicator light LED
   - Check the LED of the high-range indicator light.
   - Refer to “CHECKING THE LEDs”.
   - NO CONTINUITY
     - Replace the meter assembly.
   - CONTINUITY

2. Gear position switch
   - Refer to “CHECKING THE SWITCH”.
   - NO CONTINUITY
     - Replace the gear position switch.
   - CONTINUITY

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket coupler.
   - Tester (+) lead → Red/White terminal ①
   - Tester (−) lead → Blue/White terminal ②
   - MEETS SPECIFICATION
     - This circuit is not faulty.

- Turn the main switch to “ON”.
- Check the voltage (12 V).
- OUT OF SPECIFICATION
  - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
5. If the low-range indicator light fails to come on:

1. Low-range indicator light LED
   - Check the LED of the low-range indicator light.
   - Refer to “CHECKING THE LEDs”.
   - **NO CONTINUITY**
     - Replace the meter assembly.
   - **CONTINUITY**

2. Gear position switch
   - Refer to “CHECKING THE SWITCH”.
   - **NO CONTINUITY**
     - Replace the gear position switch.
   - **CONTINUITY**

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket coupler.
   - Tester (+) lead → Red/White terminal ①
   - Tester (−) lead → White/Red terminal ②
   - **OUT OF SPECIFICATION**
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
   - **MEETS SPECIFICATION**
     - This circuit is not faulty.

   - Turn the main switch to “ON”.
   - Check the voltage (12 V).
6. If the reverse indicator light fails to come on:

1. Reverse indicator light LED
   - Check the LED of the reverse indicator light. Refer to “CHECKING THE LEDS”.
   - **NO CONTINUITY**
     - Continuity
     - Replace the meter assembly.
   - **CONTINUITY**
     - Replace the reverse switch.

2. Reverse switch
   - Refer to “CHECKING THE SWITCH”.
   - **NO CONTINUITY**
     - Replace the reverse switch.
   - **CONTINUITY**

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket coupler.
   - **NO CONTINUITY**
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
   - **CONTINUITY**
     - Replace the CDI unit.

   - **MEETS SPECIFICATION**
     - Replace the CDI unit.

   - **OUT OF SPECIFICATION**
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
7. If the coolant temperature indicator light does not come on when the main switch to “ON”, or if the coolant temperature indicator light does not come on when the temperature is high (more than 107 ~ 113 °C (224.6 ~ 235.4 °F));

1. Coolant temperature indicator light LED
   - Check the LED of the coolant indicator light.
   Refer to “CHECKING THE LEDs”.

2. Thermo switch 1
   - Remove the thermo switch 1 from the cylinder head.
   - Connect the pocket tester (Ω × 1) to the thermo switch 1.
   - Immerse the thermo switch 1 in coolant 2.
   - Check the thermo switch 1 for continuity.
   While heating the coolant use a thermometer 3 to record the temperatures.

</table>

Tests 1 & 2; Heat-up tests
Tests 3* & 4*; Cool-down tests

⚠️ WARNING
Handle the thermo switch 1 with special care.
Never subject it to a strong shock or allow it to be dropped. Should it be dropped, it must be replaced.

Thermo switch 1:
8 Nm (0.8 m·kg, 5.8 ft·lb)
Three bond sealock® #10

NO CONTINUITY
Replace the meter assembly.

CONTINUITY

GOOD CONDITION

BAD CONDITION
Replace the thermo switch 1.
3. Voltage

- Connect the pocket tester (DC 20 V) to the bulb socket connector.

  **Tester (+) lead → White/Blue terminal**
  **Tester (−) lead → Frame ground**

- Turn the main switch to “ON”.
- Check the voltage (12 V).

  **MEETS SPECIFICATION**

  **OUT OF SPECIFICATION**
  The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.

  **INCORRECT**

4. Start switch

- Refer to “CHECKING THE SWITCH”.

  **CORRECT**

  This circuit is not faulty.

  **INCORRECT**

  Replace the handlebar switch (left).
8. If the differential gear lock indicator light LED fails to come on:

1. Differential gear lock indicator light
   - Check the LED of the differential gear lock indicator light. Refer to “CHECKING THE LEDs”.
   - NO CONTINUITY
     - Replace the meter assembly.
   - CONTINUITY

2. Four-wheel drive switch
   - Refer to “CHECKING THE SWITCH”.
   - NO CONTINUITY
     - Replace the four-wheel drive switch.
   - CONTINUITY

3. Voltage
   - Connect the pocket tester (DC 20 V) to the bulb socket lead.
     - Tester (+) lead → Black/Red terminal
     - Tester (−) lead → Frame ground
     - MEETS SPECIFICATION
     - This circuit is not faulty.
   - OUT OF SPECIFICATION
     - The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.
   - Turn the main switch to “ON”.
   - Check the voltage (12 V).
9. Horn does not sound. (for Europe and Oceania)

1. Horn switch
   Refer to “CHECKING THE SWITCH”.
   CORRECT
   Replace horn switch.

2. Voltage
   - Connect the pocket tester (DC 20 V) to the horn connector at the horn terminal.
   Tester (+) lead → Pink lead ①
   Tester (−) lead → Frame ground
   MEETS SPECIFICATION

   • Turn the main switch to “ON”.
   • Push the horn switch.
   • Check for voltage (12 V) on the “Pink” lead at the horn terminal.

   OUT OF SPECIFICATION
   The wiring circuit from the main switch to the bulb socket connector is faulty, repair it.

3. Horn
   - Disconnect the black lead at the horn terminal.
   - Connect a jumper lead ① to the horn terminal and ground the jumper lead.
   - Turn the main switch to “ON”.

   HORN IS NOT SOUNDED

   • Horn is good.
4. Voltage

- Connect the pocket tester (DC 20 V) to the horn connector at the horn terminal.

<table>
<thead>
<tr>
<th>Tester (+) lead</th>
<th>Black lead ①</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tester (−) lead</td>
<td>Frame ground</td>
</tr>
</tbody>
</table>

- Turn the main switch to “ON”.
- Push the horn switch.
- Check for voltage (12 V) on the “Black” lead at the horn terminal.

**OUT OF SPECIFICATION**

Replace horn.

**MEETS SPECIFICATION**

Adjust or replace horn.
TROUBLESHOOTING

IF THE FAN MOTOR DOES NOT MOVE:

Procedure
Check:
1. Fuse (main) 6. Thermo switch 2
2. Battery 7. Wiring connection
3. Main switch (the entire cooling system)
4. Fan motor
5. Circuit breaker (fan motor)

NOTE:
- Remove the following part(s) before troubleshooting.
  1) Seat
  2) Front carrier
  3) Front fender
- Use the following special tool(s) for troubleshooting.

Pocket tester:
P/N. YU-03112, 90890-03112

<tr>
<td>3. Main switch</td>
<td>INCORRECT</td>
<td>Replace the main switch.</td>
</tr>
</tbody>
</table>
4. Fan motor
- Disconnect the fan motor coupler.
- Connect the battery (12 V) as shown.

| Battery (+) lead → Blue terminal ① |
| Battery (−) lead → Black terminal ② |

- Check the operation of the fan motor.

5. Circuit breaker (fan motor)
- Remove the circuit breaker from the wire harness.
- Connect the pocket tester (Ω × 1) to the circuit breaker.

**Circuit breaker resistance:**
Zero Ω at 20 °C (68 °F)

- MEETS SPECIFICATION
- *DOES NOT TURN*
  - Replace the fan motor.
- *OUT OF SPECIFICATION*
  - Replace the circuit breaker.
6. Thermo switch 2

- Remove the thermo switch 2 from the radiator.
- Connect the pocket tester (Ω x 10) to the thermo switch 2 ①.
- Immerse the thermo switch 2 in coolant ②.
- Check the thermo switch 2 for continuity. While heating the coolant use a thermometer ③ to record the temperatures.

<table>

Tests 1 & 2; Heat-up tests
Tests 3* & 4*; Cool-down tests
○: Continuity  ×: No continuity

**WARNING**

Handle the thermo switch 2 with special care.

Never subject it to a strong shock or allow it to be dropped. Should it be dropped, it must be replaced.

Thermo switch 2:
28 Nm (2.8 m • kg, 20 ft • lb)
Three bond sealock® #10

Replace the thermo switch 2.
7. Wiring connection

- Check the connections of the entire starting system.
  Refer to “CIRCUIT DIAGRAM”.

CORRECT

This circuit is not faulty.

POOR CONNECTION

Properly connect the cooling system.
2WD/4WD SELECTING SYSTEM

CIRCUIT DIAGRAM

- Main switch
- Battery
- Main fuse
- CDI unit
- Four-wheel drive fuse
- Four-wheel drive relay 1
- Four-wheel drive relay 2
- Four-wheel drive relay 3
- On-command four-wheel drive switch and differential gear lock switch
- Gear motor
TROUBLESHOOTING

IF THE FOUR-WHEEL DRIVE INDICATOR FAILS TO COME ON:

Procedure
Check:
1. Fuse (main, four-wheel drive)
2. Battery
3. Main switch
4. Four-wheel drive relay 1
5. Four-wheel drive relay 2
6. Four-wheel drive relay 3
7. On-command four-wheel drive switch and differential gear lock switch
8. Gear motor
9. Wiring connections (the entire 2WD/4WD selecting system)

NOTE:
• Remove the following part(s) before troubleshooting:
  1) Seat
  2) Front carrier
  3) Front fender
• Use the following special tool(s) for troubleshooting.

Pocket tester:
P/N. YU-03112, 90890-03112

EB802011

1. Fuse (main, four-wheel drive)
Refer to “CHECKING THE SWITCH”.

NO CONTINUITY
Replace the fuse.

CONTINUITY

EB802012

2. Battery

• Check the battery condition.
  Refer to “CHECKING THE BATTERY” in CHAPTER 3.

Open-circuit voltage:
12.8 V or more at 20 °C (68 °F)

INCORRECT

• Clean the battery terminals.
• Recharge or replace the battery.

CORRECT

3. Main switch
Refer to “CHECKING THE SWITCH”.

INCORRECT

CORRECT

* Replace the main switch.
### 2WD/4WD SELECTING SYSTEM

#### ELEC

---

### 4. Four-wheel drive relay 1

- Remove the four-wheel drive relay 1 from the wire harness.
- Connect the pocket tester (Ω × 1) and the battery (12 V) to the four-wheel drive relay 1 terminals.

<table>
<thead>
<tr>
<th>Tester (+) lead</th>
<th>Brown/Black terminal ①</th>
</tr>
</thead>
<tbody>
<tr>

<table>
<thead>
<tr>
<th>Battery (+) terminal</th>
<th>Brown/Red terminal ③</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery (–) terminal</td>
<td>Blue/Green terminal ④</td>
</tr>
</tbody>
</table>

- Check the four-wheel drive relay 1 for continuity.

---

### 5. Four-wheel drive relay 2

- Remove the four-wheel drive relay 2 from the wire harness.
- Connect the pocket tester (Ω × 1) and the battery (12 V) to the four-wheel drive relay 2 terminals.

<table>
<thead>
<tr>
<th>Tester (+) lead</th>
<th>Black/Yellow terminal ①</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tester (–) lead</td>
<td>Black terminal ②</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Battery (+) terminal</th>
<th>Brown/Red terminal ③</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery (–) terminal</td>
<td>Blue/Red terminal ④</td>
</tr>
</tbody>
</table>

- Check the four-wheel drive relay 2 for continuity.

---

**NO CONTINUITY**

*Replace the four-wheel drive relay 1.*

---

**NO CONTINUITY**

*Replace the four-wheel drive relay 2.*
6. Four-wheel drive relay 3

- Remove the four-wheel drive relay 3 from the wire harness.
- Connect the pocket tester (Ω × 1) and the battery (12 V) to the four-wheel drive relay 3 terminals.

<table>
<thead>
<tr>
<th>Tester (+) lead</th>
<th>Brown/Red terminal 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tester (−) lead</td>
<td>Yellow/Black terminal 2</td>
</tr>
</tbody>

<table>
<thead>
<tr>
<th>Battery (+) terminal</th>
<th>Brown/Red terminal 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery (−) terminal</td>
<td>Yellow/Black terminal 2</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Tester (+) lead</th>
<th>Blue/Red terminal 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tester (−) lead</td>
<td>Gray terminal 4</td>
</tr>
</tbody>
</table>

- Check the four-wheel drive relay 3 for continuity.

7. On-command four-wheel drive switch and differential gear lock switch

Refer to “CHECKING THE SWITCH”.

* NO CONTINUITY

Replace the four-wheel drive relay 3.

* CONTINUITY

INCORRECT

Replace the on-command four-wheel drive switch and differential gear lock switch.

CORRECT
8. Gear motor

- Disconnect the gear motor coupler.
- Remove the gear motor from the differential gear case.
  Refer to “FRONT CONSTANT VELOCITY JOINTS AND DIFFERENTIAL GEAR” in CHAPTER 7.
- Connect two C size batteries to the gear motor terminals (as shown illustrations).

A. Check that the pinion gear 2 turns counterclockwise.
B. Check that the pinion gear 2 turns clockwise.

- Make sure that the drive gear (shift fork sliding gear) operates correctly.

**NOTE:**
When installing the differential gear case in the gear motor, refer to “FRONT CONSTANT VELOCITY JOINTS AND DIFFERENTIAL GEAR” in CHAPTER 7.

9. Wiring connection

- Check the connections of the entire 2WD/4WD selecting system.
  Refer to “CIRCUIT DIAGRAM”.

**INCORRECT**
Replace the gear motor.

**POOR CONNECTION**
Properly connect the 2WD/4WD selecting system.

**CORRECT**
Replace the meter assembly.
NOTE:
The following troubleshooting does not cover all the possible causes of trouble. It should be helpful, however, as a guide to troubleshooting. Refer to the relative procedure in this manual for inspection, adjustment and replacement of parts.

STARTING FAILURE/HARD STARTING

FUEL SYSTEM
Fuel tank
- Empty
- Clogged fuel filter
- Clogged fuel strainer
- Clogged fuel breather hose
- Deteriorated or contaminated fuel
Fuel cock
- Clogged fuel hose

Carburetor
- Deteriorated or contaminated fuel
- Clogged pilot jet
- Clogged pilot air passage
- Sucked-in air
- Deformed float
- Worn needle valve
- Improperly sealed valve seat
- Improperly adjusted fuel level
- Improperly set pilot jet
- Clogged starter jet
- Starter plunger malfunction
Air filter
- Clogged air filter element

ELECTRICAL SYSTEM
Spark plug
- Improper plug gap
- Worn electrodes
- Wire between terminals broken
- Improper heat range
- Faulty spark plug cap
Ignition coil
- Broken or shorted primary/secondary
- Faulty spark plug lead
- Broken body
CDI system
- Faulty CDI unit
- Faulty pickup coil
- Faulty charging/rotor rotation direction coil
- Broken woodruff key

Switches and wiring
- Faulty main switch
- Faulty engine stop switch
- Broken or shorted wiring
- Faulty gear position switch
- Faulty start switch
- Faulty rear brake switch
Starter motor
- Faulty starter motor
- Faulty starter relay
- Faulty starter clutch
COMPRESSION SYSTEM
Cylinder and cylinder head
- Loose spark plug
- Loose cylinder head or cylinder
- Broken cylinder head gasket
- Broken cylinder gasket
- Worn, damaged or seized cylinder

Piston and piston rings
- Improperly installed piston ring
- Worn, fatigued or broken piston ring
- Seized piston ring
- Seized or damaged piston

Valve, camshaft and crankshaft
- Improperly sealed valve
- Improperly contacted valve and valve seat
- Improper valve timing
- Broken valve spring
- Seized camshaft
- Seized crankshaft

POOR IDLE SPEED PERFORMANCE

POOR IDLE SPEED PERFORMANCE

Carburetor
- Improperly returned starter plunger
- Loose pilot jet
- Clogged pilot jet
- Clogged pilot air jet
- Improperly adjusted idle speed (Throttle stop screw)
- Improper throttle cable play
- Flooded carburetor

Electrical system
- Faulty spark plug
- Faulty CDI unit
- Faulty pickup coil
- Faulty charging/rotor rotation direction coil
- Faulty ignition coil

Valve train
- Improperly adjusted valve clearance

Air filter
- Clogged air filter element

POOR MEDIUM AND HIGH-SPEED PERFORMANCE

POOR MEDIUM AND HIGH-SPEED PERFORMANCE

Refer to “STARTING FAILURE/HARD STARTING” and “POOR IDLE SPEED PERFORMANCE-VALVE TRAIN”.

Carburetor
- Improper jet needle clip position
- Improperly adjusted fuel level
- Clogged or loose main jet
- Deteriorated or contaminated fuel

Air filter
- Clogged air filter element
FAULTY DRIVE TRAIN

The following conditions may indicate damaged shaft drive components:

<table>
<thead>
<tr>
<th>Symptoms</th>
<th>Possible Causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. A pronounced hesitation or “jerky” movement during acceleration, deceleration, or sustained speed. (This must not be confused with engine surging or transmission characteristics.)</td>
<td></td>
</tr>
<tr>
<td>2. A “rolling rumble” noticeable at low speed; a high-pitched whine; a ”clunk” from a shaft drive component or area.</td>
<td></td>
</tr>
<tr>
<td>3. A locked-up condition of the shaft drive mechanism, no power transmitted from the engine to the front and/or rear wheels.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>A. Bearing damage.</td>
</tr>
<tr>
<td></td>
<td>B. Improper gear lash.</td>
</tr>
<tr>
<td></td>
<td>C. Gear tooth damage.</td>
</tr>
<tr>
<td></td>
<td>D. Broken drive shaft.</td>
</tr>
<tr>
<td></td>
<td>E. Broken gear teeth.</td>
</tr>
<tr>
<td></td>
<td>F. Seizure due to lack of lubrication.</td>
</tr>
<tr>
<td></td>
<td>G. Small foreign objects lodged between the moving parts.</td>
</tr>
</tbody>
</table>

NOTE: Areas A, B, and C above may be extremely difficult to diagnose. The symptoms are quite subtle and difficult to distinguish from normal machine operating noise. If there is reason to believe these components are damaged, remove the components and inspect them.
FAULTY GEAR SHIFTING

HARD SHIFTING
Refer to “CLUTCH SLIPPING/DRAGGING-CLUTCH DRAGGING”.

SHIFT LEVER DOES NOT MOVE
Shift shaft
- Bent shift shaft
Shift cam, shift fork
- Groove jammed with impurities
- Seized shift fork
- Bent shift fork guide bar

Transmission
- Seized transmission gear
- Jammed impurities
- Incorrectly assembled transmission

Shift guide
- Broken shift guide

JUMPS OUT OF GEAR
Shift shaft
- Improperly adjusted shift lever position
- Worn shift shaft lever
- Improperly returned stopper lever
Shift fork
- Worn shift fork

Shift cam
- Improper thrust play
- Worn shift cam groove

Transmission
- Worn gear dog

FAULTY CLUTCH PERFORMANCE
ENGINE OPERATES BUT MACHINE WILL NOT MOVE
V-belt
- Bent, damaged or worn V-belt
- V-belt slips
Primary pulley cam and primary pulley slider
- Damaged or worn primary pulley cam
- Damaged or worn primary pulley slider

Transmission
- Damaged transmission gears

CLUTCH SLIPPING
Clutch spring
- Damaged, loose or worn clutch shoe spring
Clutch shoe
- Damaged or worn clutch shoe

Primary sliding sheave
- Seized primary sliding sheave

POOR STARTING PERFORMANCE
V-belt
- V-belt slips
- Oil or grease on the V-belt
Primary sliding sheave
- Faulty operation
- Worn pin groove
- Worn pin

Clutch shoe
- Bent, damaged or worn clutch shoe
POOR SPEED PERFORMANCE

V-belt
- Oil or grease on the V-belt

Primary pulley weight
- Faulty operation
- Worn primary pulley weight

Primary fixed sheave
- Worn primary fixed sheave

Primary sliding sheave
- Worn primary sliding sheave

Secondary fixed sheave
- Worn secondary fixed sheave

Secondary sliding sheave
- Worn secondary sliding sheave

OVERHEATING

Ignition system
- Improper spark plug gap
- Improper spark plug heat range
- Faulty CDI unit

Fuel system
- Improper carburetor main jet (improper setting)
- Improper fuel level
- Clogged air filter element

Compression system
- Heavy carbon build-up

Engine oil
- Improper oil level
- Improper oil viscosity
- Inferior oil quality

Brake
- Brake drag

Oil cooling system
- Clogged or damaged oil cooler

FAULTY BRAKE

POOR BRAKING EFFECT
- Worn brake pads
- Worn disc
- Air in brake fluid
- Leaking brake fluid
- Faulty master cylinder kit cup
- Faulty caliper kit seal
- Loose union bolt
- Broken brake hose and pipe
- Oily or greasy disc/brake pads
- Improper brake fluid level
SHOCK ABSORBER MALFUNCTION

MALFUNCTION
- Bent or damaged damper rod
- Damaged oil seal lip
- Fatigued shock absorber spring

UNSTABLE HANDLING

UNSTABLE HANDLING
Handlebar
- Improperly installed or bent
Steering
- Incorrect toe-in
- Bent steering stem
- Improperly installed steering stem
- Damaged bearing or bearing race
- Bent tie-rods
- Deformed steering knuckles
Tires
- Uneven tire pressures on both sides
- Incorrect tire pressure
- Uneven tire wear

LIGHTING SYSTEM

HEADLIGHT DARK
- Improper bulb
- Too many electric accessories
- Hard charging (broken charging coil and/or faulty rectifier/regulator)
- Incorrect connection
- Improperly grounded
- Poor contacts (main or light switch)
- Bulb life expired

BULB BURNT OUT
- Improper bulb
- Faulty battery
- Faulty rectifier/regulator
- Improperly grounded
- Faulty main and/or light switch
- Bulb life expired
